Or instead of hacking in your game disks for something the programmer should have thought of, just run MAKE1MB.PRG. When your screen turns red, pop in the game and it's running on a "1 MB" computer. It says like this until you turn it off.

Not flamming anyone, but this does remind me of a Dilbert cartoon on my calander with Dogbert, patron saint of technology casting out demons of stupidity.

Software Developer: I'll make the command easy to remember like "CTRL-ALT-F4-DEL". And if they forget that they can edit the source code in "COMMAND.COM"

Dogbert: OUT! OUT!

:)

"Out! Out! You demons of stupidity!!"

I belive the captial "C" letter is used hard drives and Ramdisks while
lowercase "c" is used for the cartridge. Very few carts are read as disks
and have programs like a VT-100 terminal emulator.

>or Xcontrol at
>ftp://ftp.cs.tu-berlin.de/pub/atari/Utils/XControl/xctr131d.tos

I presume the "d" in "xctrl131d.tos" is an abbreviation for "Deutsch/German"?

In case that's correct and the person asking for it (or anyone else for that matter) wants an UK-English/US-English version they can find it at my site:

ftp://ftp.sn.no/user/hallvart/atari/cpx/

98K xcontrol.zip: UK/USA (the eXtensible control panel) for CPX modules
color : desktop colour
config : configure CPX modules
general: keyclick/repeat/bell/double click etc.
maccel : configure mouse accelerator (use with 'maccel.prg')
modem : modem setup
printer: printer setup
sound : sound level, bass, treble etc.
wcolors: window colours (not the same as 'wincolor.zip')

(It's version 1.31 as well. And the differences between the UK/US versions is the date format).

For more CPX modules you just look around in the same directory (grab hold of "00_cpx.txt" for an overview of what's in there and what the different modules do.

: >That's really a driver-level task.(or shared library)

: See below.

: >: Does TOS have anything like QuickTime?
: >
: >Isn't QuickTime a thing like PC's AVI files?

: No. AVI is just a simple movie format. QT is a generalized format for
: data played over time (QT tracks can contain all sorts of different
: things). QT is also a complete set of operating system calls to manage QT
: data, so that if you are a programmer, you don't have to worry about the
: details of it yourself.

Once again,this could be implemented as a shared library or server process.
(you might have to add simple rudimentry functions to the graphics driver
like the ability to allocate and find the graphics memory buffer)

: >I don't see what animation has to do with OSes.Do you know what TOS is?

: Yes. I owned a TOS computer for several years.

: In this day and age, a personal computer operating system is expected to
: provide a wide array of services above and beyond the basics (memory
: allocation, process management, file systems, and basic I/O).

But what you've described (handling data) is the job for a shared library.
MacOS should already have the capability to handle graphics and sound.
(or it's drivers would,to be more acurate)

: BTW, next time you reply to something, please trim the parts of the post
: you aren't responding to.

The best VT100 emulator I used wasn't on the ST but the (REAL) Atari.
It's called Ice-T and suports double wide(40-column) and double high text.
And the VT100 character set.Does UniTerm do this?
(I've mostly been using ANSITerm on the ST,and need a REAL VT100 prg)

: I've had no major problems using "Connect" with VT-100 emulation.
: I use "Emacs" a lot as an editor on the UNIX machine I'm connected to
: when I'm online and it works just fine.

The Connect I used used a GEM window and only had 14 lines!!!
Of course GEM is so slow that you can actually see the flicker which
occurs when the bit-planes are out of sync.
(with TOS programmes,the bitplanes are out of sync for so little time that
it's invissible.The BIOS probably scrolls a line at-a-time instead of a
bitplane-at-a-time)
And the mouse cursor was invissible when text was coming in.

I gladly have an ISP with shell account, but I find this usage quite
uncomfortable. i can't imagine that filtering is hard to program.
For example, the (German) frontend to the mausnet, CAT, is an excellent offline
reader, with full-fledged filtering, navigating and database searching
capabilities. I haven't found a program like that even on PCs or Macs.

1997 UK Atari Shows Atari Computing Press Release
---
Mike Goodman, the organiser of the successful Atari Shows last September, has confirmed two Spring Atari Shows will be taking place in April at the same venues as last time:

- Saturday 26th April: National Motorcycle Museum, Birmingham - probably in the Compton Suite.

- Sunday 27th April: Osterley Four Pillars Hotel, London.

- May? Possible Glasgow show although details still have to be confirmed.

Both shows will be open from 10am to 5pm, and most of the exhibitors from the last shows plan to attend. Mike confidently expects some new exhibitors, of which more news to follow.

Atari Computing have a stand at both shows, so make a note in your diary to show support for the Atari scene and tell us face to face what you'd like to see in the magazine. Even better bring along some articles or software we can use in the magazine!

Full details will be included in Atari Computing issue 4 but if you'd like to exhibit or require more details contact:

Tel: +44 (0)1782 335650
Fax: +44 (0)1782 316132
Goodmans, 16 Conrad Close, Meir Hay Estate, Longton, Stoke-on-Trent, ST3 1SW (enclose SAE for reply).
---
Please spread this Press Release far and wide:

* BBS SysOps please post this to your local areas...
* If you have Atari Web pages please post this there...
* User Groups, publicise the shows at your meetings and organise car shares...

Many microkernel operating systems implement the *file system* as a user
mode process. Does this mean that the file system is no longer part of
the OS, just because it doesn't execute in the kernel address space or
supervisor mode?

QT is in fact a set of shared libraries. Nonetheless, it is a service
offered by the Mac OS to application programs. The main reason QT is
implemented that way is so that it doesn't needlessly occupy memory while
it isn't being used.

>: BTW, next time you reply to something, please trim the parts of the post

I really haven't the faintest clue. PICO is nice and easy to use, but it
seems to be deficient in capabilities. Not that I'm a wizard with UNIX
text editors; I refuse to learn vi unless I really have to and I know just
enough EMACS to get by.

You won't. It's payware :-(

The problem is that you need a Resource Construction Set (RCS) that can process resource files with color icons. Currently Interface is the only one. But: Thorsten Otto has promised a new version of ORCS (and it will get along with color icons). There are (quite concrete) rumours of another new RCS but I don't know anything exact.

If you simply want to reassign icons to some new file type, you can use ThingICN by Holger Weets.

> Secondly, and more importantly, the whole program freezes when I try to
> open a second window (folder or drive partition). Is this something that
> is disabled in the demo or what?
Maybe you should get the latest version or simply ask the author. I've got no such problems with Thing.

Since all of the above mentioned programs are developed in Germany it might be a good idea to look out on German ftp sites.

ftp://ftp.uni-paderborn.de/pub/atari and
ftp://ftp.tu-clausthal.de/pub/atari

are good choices for the beginning.

Ciao

Guido

I think Gemulator is $69.95US (about 46 UK pounds)
That is if you buy it without Magic or Tos.

cant recall the exact price, but certainly more expensive than the
going rate for an st?

so whats magic pc like? any good, I have gemulator demo running with
a tos206 img, and gemulator full with magic503e....certainly prefer
the demo with tos at the moment ?...having trouble getting sound to
work on the full version ...

Yes one can get ascii from a ST Guide HYP file. Included with ST GUIDE should be a compilier which can also extract text & pictures. You need to input the correct command line. I think its -X? Its a TTP program.

I haven't done this in awhile though but it can be done.

Rich

# 1711. NEWSie (on GlueSTiK): prob. getting article list

Newsgroup: comp.sys.atari.st
Date: 1997-01-26 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <HA1OBBUQUp@tos.ak.planet.gen.nz>
Source record: 129253

I have recently obtained NEWSie 0.66 and am attempting to use it to read the usenet news. I use MiNTNet and am trying to use NEWSie via GlueSTiK. I believe the GLUESTiK version is 0.2.

Other STiK apps work fine (e.g. Ant Mail) but NEWSie seems to give some problems.

In particular, when I "connect to the server" in NEWSie and then double click on a newsgroup from my "subscribed-to groups list", NEWSie comes up with a dialog which looks like this:

```
+----------------------------+
| Retrieving Group Overview |
| |
| Sending request |
| |
| Press ESC to abort transfer |
+----------------------------+
```

After a moment, the middle line changes to "Bytes received (0)". It remains this way for some time, and then the dialog vanishes. At this point, the newgroup article list window has opened, but no articles are listed.

Getting the usenet articles using the "offline" functions of NEWSie, however, works relatively well although there are still some more minor problems (sometimes it seems to skip certain newsgroups, the scrolling is very problematic to name a few).

I am trying to set up NEWSie for someone who will only be here for a couple more days, so I _urgently_ need some help on this. I would appreciate it if you could reply by email for the same reason, and since I will be too busy to read the usenet.

Thanks very much for any suggestions.

A while back, Demon had a problem with their ftpserver. When I went to perform maintenance, everything in the /pub/atari/incoming dir was 0 byes long. I tried to email everyone who uploaded to ask if they would do so again - some did, some obviously didn't.

Remember you can get Oasis 2.1 from http://www.yeadontt.demon.co.uk/ as well. If any kind sould would care to upload it to ftp.demon.co.uk again (hello Daron! [g]), I'll make it available.

Nope - MichTron supports 2400 and below out of the box. There were hacks floating about to get it to "work" at 9600, but they were unreliable to say the least. Someone will probably have hacked it by now, but it's still a bit late ;)

Yeah, I remember this. When I was with STF, Atari contacted us to say
that Joust, Neochrome and a few other bits were to be withdrawn. I doubt
Atari would care now, but I have no idea what the 'official' situation
is.

h> how I did it.
h> I *think* this was the way I did it:
h> -loaded the MIME decoded file into a text editor and removed
h> everything above and below the MIME'd file itself.

I Mime encoded a text file with Esscode then compared it to the one I
wanted to decode removing all the differences. You have to leave some of
the Mime specific information in otherwise it won't decode, presumably
because it doesn't know what it's dealing with.

h> -Had a look at what the file's real name was after decoding (it says
h> in the 2nd or 3rd line from the top of the MIME file- i.e.
h> "7up209.zip") -I went into the "MIME decode" menu and immediately got
h> the file-selector. -I entered the name of the file as it should be
h> when un-MIME'd (i.e. "7up209.zip") and pressed [Return]
h> -I double clicked the MIME file itself, and (hopefully) the un-
h> MIME'ing process will start!

I usually just select decode, fileselector appears, select the file to
decode, FS appears again, then type in the target filename which, as you
say, appears in the header of the encoded file. You might need to enable
"Select Target path" in the preferences menu for this to work.

h> ** PS. I found it a *very* smart idea to make a backup of the MIME
h> file as I've experienced many times having to experiment trying to
h> make it work, and if you do this the wrong way the decoded file will
h> write over the MIME file. So by having a backup copy of it you can
h> just try it again.. Good luck!

Yes it doesn't seem to like multipart mimes either. Back-ups are
essential IME.

## 1718. FX and Afterburner?

Newsgroup: comp.sys.atari.st
Date: 1997-01-26 00:00:00 UTC
From: jperez@Hawaii.Edu
Message-ID: <5cf8se$3hc@news.Hawaii.Edu>
Source record: 129260

Greetings,

As I plan to get an Afterburner for one of my Falcons, I was
wondering if anyone has tried putting an Afterburner in with an FX card.
One of my machines is a C-Lab and thus, lacks composite video out
(something that I would want on my fast machine) and the other is an Atari
Falcon with Blowup-FX installed (and I really don't want to have it torn
out).
Just wondering...

# 1721. (4Mb)Game now RUNS!!!

Newsgroup: comp.sys.atari.st
Date: 1997-01-26 00:00:00 UTC
From: Mark Gardiner <100550.3170@CompuServe.COM>
Message-ID: <970126113019_100550.3170_EHK89-1@CompuServe.COM>
Source record: 129263

I'm so happy!!

I read all the advice and opinions surrounding my posting on how Player Manager no longer ran on my upgraded (4Mb) 1040 STf...NOW it does!!

I tried Make1Meg - no go, and read about other memory setters and started to look for some but on a moment of pique, I tried loading my resetable RAM disk and seeing if PM would run from it.

On rebooting the game started loading from the floppy (I had left it in inadvertently) and it worked on loading.

I repeated the scenario without copying any files to the RAM disk and it runs OK still!!

SO, stealing 1Mb of the 4Mb of memory has done the trick.

Many thanks all

Mark.

I don't know about the Afterburner, but I left the PowerUp2
installed in my Falcon with the Mighty Sonic (sorta like
the AB, but with an 030). I didn't use it to select clock
speed (left it at 16MHz). There was no side effect leaving
it installed, but if I tried to change the clock with it
the machine would crash as the Mighty Sonic has it's own
hardware to do that. I now have it removed from that
machine and installed in another. Don't forget to resolder
the jumper that you cut when installing the PowerUp2. It
was the row of solder beads located near the front side of
the powersupply (when you install your A/B).

Hi,

Does anyone know where I could get a GDOS printer driver for a CITOH 8510
or Prowriter? it is the same as the Apple Imagewriter, so I suppose an
Imagewriter driver woul work also.
Is it possible to make one?
Also, does anyone know where I could get the above driver for FirstWord,
WordUp, well, just about any program.
Maybe someone has a program (text or graphic)that has one of those
drivers that they might want to sell?

Thanks
terryb@bloomington.in.us

Hi Chris.

If you run NVDI and Screenblaster, you can achieve larger resolutions,
although it may come at the expense of screen redraw speed. I have the
above combination and run over 800x600 on my SVGA monitor.

The Blow UP FX hardware/software reportedly will help accomplish the
same thing, although I don't have it. Maybe someone who does will post.

Also, I believe there is a (expensive) video card for the Falcon, but
I don't know the specifics. Again, hopefully, someone will post.

> on some of the modules but there are work arounds (but I'm not into
> music too much so I didn't pay too much attention).

Again, here's the world I have on CAF compatibility with Afterburner
(If I am incorrect, please correct me, some of this info came from
Titan, some from users, but may have been fixed).

The biggest problem I have heard about is that when you are in the
wavform editor in CAF, and the screen scrolls (following playback),
the audio will stop when the wavform is redrawn.

Also, I understand the fast RAM cannot be utilized for sample
playback, but may be utilized by CAF itself.

Corrections, please? I will be upgrading my Falcon at some point, but
I need absolute CAF compatibility.. and I really want to speed up
those darn .wif wave draws!

The ST Guide compiler which comes with ST Guide itself can de-compile a HYP file back to the original ASCII source. This is probably a lot easier too, since .HYP files are compressed, so you might not get all of the data by just hacking around with the HYP file.

Have you used AOL, Paul? I wouldn't go so far as to say it's crap, it depends on what you want from a service. Don't get me wrong, I wouldn't call AOL an ISP like Demon is, but it provides a decent online environment for lots of people.

The comparison made earlier between Demon and AOL is unfair, IMHO. They both suffer from a fairly high level of idiot users purely because they both have a high level of users, full stop. No doubt if Pipex or anyone else had as many users online as Demon do, they'd have a high number of pillocks too.

ATB, Frank.

Examine and generally mess about with all the rubble. According to the
cheat you need a blowtorch and a box of fuses before finding and
entering a manhole cover to get underground.

Yeah, I got it from there after getting my second hand (non-audio)
Logic with the Log3 dongle. You _do_ need the Log3 dongle to run the
Logic Audio Falcon.

Anyway, LAF has already once trashed my harddisk and since it is not
very sophisticated in doing the audio stuff I have decided not to use
it at all. I am using the non-audio Logic 2.01 and I will quite
probably upgrade to 2.5. (The 2.5 update is _not_ free, it is 150DM in
Germany but you get a completely new manual with it). I don't know yet
the upgrade prices for the english version...

Greetings, Jouni

>Well, I opened the window and installed the application. But this whole
>window path changing thing has got me just a bit confused.

That's only a different wording for "close the U:\BIN\ window and open
one on U:\CAB\". Clic on the closer, find the CAB folder, double clic it.
Nothing else!

BTW, if you don't want to have 2 copies of sh, one named SH and the
other SH.TTP: after you installed SH.TTP as an application and saved the
DESKTOP.INF (or NEWDESK.INF), edit the *.INF to remove the ".TTP" extender
in sh filename, and delete the file SH.TTP, you'll never require it again.

Bye! Bruno.

Hi Frank and Andy!! What fun that MNET was while it lasted! I still have it set up (as extra message bases) even though no one else runs it! It was fun chatting with you folks in the U.K. and Werner in Holland (is he still around?).

>Eventually though, the BBS needed to evolve. With the non-appearance of

>the brand new and very powerful RATSoft/ST BBS software from the USA.
>Mark Matts, SysOp of the old System ST BBS popped up on the train from
>Nottingham, and spent a long day with Andy and Frank, installing and
>configuring the new BBS. Within a day or two, the new Ad.Lib was born,
>using the relatively new 14,400 modem technology.

It took me a little bit longer, and I'm still running MichTron on one line, but I have also moved to RatSoft. If you have some tips for setting up all of the networking modules, I'd love to hear from you guys! I haven't played around with it much because I'm waiting to supplement the Falcon's internal HD space - 80 megs just won't cut it! <g>

I understand the need for time to support a BBS. It seems such a shame to hear one of the "big guys" considering to shut down. I hope that you reconsider. As the SysOp at Toad Hall here in Boston for almost 10 years now, I can appreciate how hard this must be to consider. If activity is a factor, I can _guarantee_ networking with Ad.Lib once I get it set up and running properly (bring back the old days when we networked with MNET! <g>).

Keep me posted with what your final decision is to be - I hope you can't find the heart to pull the plug!!

-Dana

They did. There was one cartridge (the name escapes me) that had a
battery-backed realtime clock, some utilities, and a bunch of desk
accessories in it. Sort of a "poor man's hard drive" except it was
read-only.

Well, I think you misread the text, Frank. I made the comparision, but I
was referring to the level of service - I see many complaints about Demon,
and AOL has a reputation even among techno-dumb disk jockies as being
impossible to logon to, due to constant "busy" signals.

However, as for AOL having more than their share of gits - here in the USA,
that's almost certainly true, for the simple reason that they advertise on
TV (at a level called "spamming" in a certain other medium <G>) with
commercials specifically designed to appeal to idiots. That, and the fact
that they have their automatic signup software on practically every cover
disk and cover CD published, and mail out free coasters, er, disks as well,
almost guarantees that all the idiots who used to be spamming the airwaves
on CB radio will be on AOL next week, if they aren't there already.

That "PD" Neochrome was the hack that broke the camels back! When
Atari heared about that one they were not happy, they had let Joust,
9 Lives etc pass but they weren't having any of the updated cracks for
some reason!

: Yeah, just like everyone always wants to "test" software.

: ATB, Frank.

OK, I am giving you the reason:
I have a PAK3 68020 accelerator in my MegaST with a French TOS 2.06. I have the opportunity to put more memory with an expansion card (FRAK020) but the reseller told me that I would need a TOS 3.06. AS this FRAK card costs more than 200 DM, I just want to be sure that my accelerator card is supported by TOS 3.06.
That's it !!!

BTW, AIXIT Gmbh (http://www.aixit.com) sells a memory expansion card that goes beyond the 4Mb barrier on ANY STfm thus allowing a maximum of 14Mb of memory and for a fairly small price (around 200DM)

Hi stud0772@di.uoa.gr, on 26 Jan 97 you wrote:

s> I want to access my PC's hard and CD-ROM drives from my Mega 4.I 've
s> heard of
s> Ghostlink,but it uses the serial interface,so it should be rather
s> slow...

You can get 19200bps which is certainly slow compared to HD speeds but is far
better than transferring by floppy!

Any solution using a faster port (eg. DMA) and possible sharing of filestore
is complex. I don't think there is a standard solution for this.

s> Any hints?

All I can think of is that you do not attempt to "process" a file on the
other machine. Transfer it across and then do the processing on the local
filestore.

: or 1 Meg on the Portfolio. This is powered by somethink like the 8088
: or equivilant (IBM clone).

: What are your needs and perhaps I or other's here can give you some
: advice on what might be best suited for you.

Well, I manage a pizza restaurant. I use my Mega4, primarily, for
inventory and desktop publishing. I would like a portable computer so
that I can avoid the particularly annoying task of copying all of our
records so that I can enter them into my computer. It would seem, at
first glance, that a STacy would best fit my needs. I've not seen many
advertised for sale and there are not alot of information resources about
them anywhere.

If I do find one used, what should I expect to pay for, let's say, a stock
model? What about hard drives and modems? Are they available for the
STacy?

Keep the information coming!

Thank you VERY much.

Joel!

Yes, you can get a Stacy in the used market. I've seen them running
from about $400 U.S Dollars to over $1000. depending upon whom
was selling it and what it was equipped with.

The basic Stacy came with either 2 or 4 megs, a 60 meg HD I believe, latter upgraded to about 85 megs I believe. I saw Bob Brodies as he did a tour for ATari to visit our user group I once belonged to in Dallas TX. They are nice computers, the mouse icon can get lost fairly easy in the monochrome, non-backlite screen. They are very useable for DTP and other things, you can plug in a ST monitor into it along with external HD's and/or floppies. But, are you saying you need a second computer or just an easy way to move your files.

If you just looking for an easy way to move your files, I'd recommend getting a Syquest EZ-135 drive. I got one and it's great.
Drive cost is anywhere from $80-130 depending upon the source.
Extra cartridges run about $19.95 -22 each for 135 megs.

If your looking for a second computer setup and don't need the portibility you'd be better off to pick up another Mega or Mega STe (16 mzh) system.. Much faster for DTP
I've seen whole systems for $100 and up reciently.

After all, Atari is no longer making or supporting them.
So, as people feel the urge to move up into something still supported, they are selling them dirt cheap..

> they have a MIDI synth is beyond me).

Yup. I ment an MIDI instrument.
So it uses the Yamaha chip. Hhmm... not very good then. What we would need
is a Falcon version which supports the DSP and 16-bit 32 channels of sound.
Now, that would be cool! There are mod players all over the place, maybe
someone culd use the routines from one of them...

> >What the h*ll happened to T.D.S.M from Griff!!!!! :-((((
>
> Beats me, what IS TDSM?

The Digital Sound Module, or something like it. It was basicly a 24
channel general midi compatible prog for the falcon to turn it
into a sample player. If I understod it corretly it was about to be
released by System Solution, but I have not heard anyting about it
for 2 years. Looked good and sounded very interresting. :-((

I have tried to ask Griff (Martin Griffiths) about it, but no reply.

I have no idea. I know of a guy how have orderd an AB040 and he has got
an FX installed. I'm not sure if he will rip the FX out or will try
with it first.

I will try to ask around and see.

I know that it works with the Speed Resoluton Card, but I do not
know how the FX works. It might work with the accelerator part of
the FX (without the memory expansion port) if it doesn't use the
expansion port, but as I said. I have no idea.

Source record: 129130

Hello to All!

I've been away from the World of Atari over the last few months and was wondering what has transpired during that time.

Is ST Informer and Current Notes still publishing? How many retailers are still supporting the Atari marketplace? Are software companies still supporting the Atari with updates to existing programs (Papyrus 4, ICD Utilities, etc.)? Are there still lots of programs being released on the Shareware market? What about Europe... I know ST Format went under along with several top retailers; what is the state of Atari in England? Is Goodmans still around?

Any info you can supply regarding how the Atari marketplace is faring will be greatly appreciated!!

Thanks in advance!

Al

DADE is included with DiamondEdge2, and is in the manual.
You can go into DADE from a menu selection in DiamondEdge,
or you can run it as a stand alone program. It is used for
accessing raw data on the hard drive, boot sectors, etc

# 1762. Ad.Lib BBS is closing (LONG MESSAGE)

Newsgroup: comp.sys.atari.st
Date: 1997-01-27 00:00:00 UTC
From: frank@SPAMBLOCK_REMOVE_TO_REPLYtachyon.co.uk
Message-ID: <19970127134410158 94@tachyon.demon.co.uk>
Source record: 129132

The Ad.Lib BBS is closing...

It is with deep regret that we make this announcement - the Ad.Lib BBS is closing its doors for the final time. After a long and prestigious five year history as a major Atari BBS, Ad.Lib will be powering down for the final time at 11:59 p.m. on February 28th, 1997.

There now follows a brief history of the board, detailing some of the major landmarks of the last few years. If you don't want to read the long message, please accept our heartfelt thanks if you ever called the Ad.Lib BBS.

We don't really want to close, but it seems that Ad.Lib has reached the end of its natural life. It was not an easy decision, but Frank and Andy (The SysOps) decided that they could not, any longer, commit the time and energy to give the BBS the care it so richly deserves.

Now, those of you who are interested, read on...

Ad.Lib began as the brainchild of Andy Curtis many years ago, when he was first bitten by the comms bug after connecting to the old Bath BBS, a MichTron system for Atari users. He acquired a copy of the STarnet BBS software, and armed with a single ST and old 300 baud modem (!), he set up a simple test system. Andy placed an ad in the Fidonet Atari area on a local PC BBS, looking for test callers. Another Atari user recently bitten by the comms bug - Frank Charlton - decided to call. Andy cocked up that first time, though - he left his answering machine on, and it picked up the call before the BBS did. Frank left a message, Andy got back in touch, and the Ad.Lib team was born...

The BBS graduated to an Amstrad 2400 modem before it actually went on-line for the first time, with the MichTron BBS software. Back then, the BBS ran MichTron from a dual-floppy setup. Different files were offered using a 'Request Disk' system - a different floppy was on-line every night, with different downloads. It all sounds rather arcane in these days of superfast modems and vast hard drives, but storage space was ridiculously expensive back in those days! From its early beginnings as a weekend only system, the BBS grew to a nightly 8pm-9am system, still running from a large RAM disk and floppies.

Andy returned from an Atari show in London with a shiny new 50MB hard drive from Gasteiner, which cost him a small fortune. He devoted his proud new purchase to the burgeoning BBS, and Ad.Lib finally offered a large selection of files. With the acquisition of a dedicated phone line, Ad.Lib became a full 24-hour BBS. Back then, MichTron was still a popular BBS system, even though it showed its age in some areas. (Wot,

no Z-Modem?) With the help of ace programmer Dave Meaker, Ad.Lib pushed the boundaries of MichTron as far as possible. Ad.Lib even joined the fledgling MNet system, a BBS network similar to NeST, linking MichTron boards as far away as the USA and the Netherlands (Hi Dana and Werner!). A lot of the users from this MichTron period became firm friends of Andy and Frank - in particular, ST FORMAT's Clive Parker appeared for the first time, going on to become a regular uploader to both Atari and Star Trek file areas. Without Ad.Lib to introduce them to Clive, neither Andy or Frank would have gone on to write for a living - for ST FORMAT and beyond. (Hi Clive, please make cheques payable to "Ad.Lib Media".)

Eventually though, the BBS needed to evolve. With the non-appearance of MichTron 3, Andy and Frank decided to jump ship. Andy ordered a copy of the brand new and very powerful RATSoft/ST BBS software from the USA. Mark Matts, SysOp of the old System ST BBS popped up on the train from Nottingham, and spent a long day with Andy and Frank, installing and configuring the new BBS. Within a day or two, the new Ad.Lib was born, using the relatively new 14,400 modem technology.

Gradually, the BBS got bigger and bigger, thanks partly to a link-up with ST Format magazine which it supported right up until the magazines demise in December 1996. With RATSoft supporting Fido-style networking, Ad.Lib linked into the NeST, Atarinet and Fidonet networks to exchange mail across the globe. Dave Meaker and Martin Stacey were by now running the Holodeck BBS, and were fiddling with their own network, Fishnet - Ad.Lib joined in, too.

Slowly but surely, the BBS file bases grew. Andy invested in more hard drive mechanisms, all built into a huge Heath Robinson style case built from an old desktop PC case Frank had salvaged. At this peak, the BBS was almost constantly engaged, and it became something of a comms 'trophy' to say you'd connected to Ad.Lib without hearing the engaged tone! During 1994 and 1995 there were over 13,000 calls per year. Andy was concerned that a lot of users were becoming frustrated at not being able to connect, and the fledgling Ad.Lib 2 was born.

Ad.Lib 2 was a second ST system with its own phone line and modem. By now, both boards progressed to the new 28,800 modems which had just become available, Andy splashed out on a new Optima 288 from Hayes at a large price we'd rather not remember! Even though very few users had these modems - it was probably only Frank who did, if truth be told, Ad.Lib became an early adopter of this now standard speed.

Around this time, Mark Matts closed System ST for the last time, and Ad.Lib 2 actually ran from the original System ST hard drives, which Andy bought from Mark. Rather than run a completely separate second BBS, Andy and Frank experimented with various networking options. MIDI networking proved too slow, and the software available at the time wasn't particularly good. After a while, Andy picked up a pair of cartridge port networking devices, which meant Ad.Lib could share data between the 2 systems. Sadly, it proved to be a nightmare for Andy and Frank to keep this system running, and to keep the two machines

synchronised. After a while, Ad.Lib 2 was slowly phased out.

As Frank became Reviews Editor then Technical Editor at STF, work pressures gradually took him away from the BBS. In stepped Steve Dent, a genial Clevelander, to take up Co-SysOp duties. Andy and Steve slaved away at keeping the BBS up to date, despite on particularly nasty hard drive crash when a vast proportion of the file bases were irretrievably lost. At this point, the Ad.Lib users showed how loyal they were - as well as a massive amount of uploading, users sent in boxes of disks stuffed with files they'd originally downloaded from Ad.Lib. At the time, Andy was amazed how the regular crowd rallied round to rebuild Ad.Lib, rather than defecting to another BBS.

Later that year, Andy and Steve hooked up a couple of CD-ROM drives to Ad.Lib, with the Crawly Crypt 1 and 2 CDs being provided by 16/32 Systems along with a copy of Mega Archive 1 from System Solutions. By mid-1996, ST FORMAT wasn't a healthy magazine, and eventually closed down. With more time on his hands, Frank popped back again to his original comms home. Steve stayed on too, bringing the Ad.Lib team up to three.

By October, it became obvious that Andy was about to move house very soon. It was to be a complex enough move to begin with, and Andy was unsure about how to proceed with the BBS. Rather than keep it offline for ages, it was decided that the whole kit and kaboodle would be relocated to Frank's house. Preparations were made, and the new number was advertised across the networks. Finally, on September 8th, Ad.Lib was sparked back into life some 13 miles across the North-East, after only a day offline. Andy's original ST was put into semi-retirement, and Frank's Falcon became the new host for the BBS. Despite some worrying hiccups like another HD crash - we had a backup of the system burned onto CD-ROM this time - Ad.Lib continued.

As 1996 ended, it became painfully obvious that things just weren't the same. Neither Frank nor Andy had anywhere near as much time as is really needed to run a 24-hour dedicated BBS, and calls were gradually beginning to dwindle as long-time BBS users were bitten by the Internet bug.

A look through Ad.Lib's userlog from the past few years has shown some surprising things. Very few of our users ever came from the North-East area of England - almost every user was calling at the National rate. Over the years, a lot of International users stuck with us. Some, like Lasse Eldrup, popped up at regular intervals, and uploaded more files than local users! Others like Dale Wright made a telephonic journey of over 300 miles every day to collect and send mail, despite having Atari boards closer to home. We thank them for sticking by us over the years, just as much as we thank everyone who ever added the Ad.Lib number to their autodialler. Without the users, a BBS is nothing. Without loyal and caring users, a BBS has no life. Thankfully, we've had both in droves, and we've loved every minute of it.

It is impossible to mention every valued user by name, there were so many, but there has to be space to mention the incredible Jessica Long. We really don't know who she is, but she called the BBS faithfully over 3 years, almost every single night! Her fast wit and charming message style were sorely missed when she left the BBS scene in 1995. Whoever and wherever you are, Jessica, thanks!

But, in the words of Star Trek - All Good Things must come to an end. For the final month of Ad.Lib's life, all restrictions have been lifted. If you've never logged on to the BBS before, now is your final chance. You don't have to wait for verification any more, and you can grab files from the very first minute you call. All download ratios have been lifted, and you can happily trough the file bases as much as you like.

Still, the Atari BBS scene lives on! We warmly invite you to call 42 BBS and join the growing numbers using it to exchange messages and files. We must be grateful to all Atari BBS SysOps for their continued dedication to the market, along with the hard work of guys such as Daron Brewood.

Finally, to anyone who ever called Ad.Lib - if you enjoyed the BBS, then please do let us know. If you have any tales to tell of your early Ad.Lib experiences, please tell us - we'd love to create a memorial to the BBS, probably in the form of a website. Both of us will still be knocking about - we both turn up on the IRC channel #atari with alarming regularity - and we don't want to lose touch. Thanks from both Andy and Frank for all those fantastic years of fun, files and friendship...

So long, and thanks for all the sausages.

Andy Curtis <andy@adlib.co.uk>
Frank Charlton <frank@tachyon.co.uk>

Make sure that you have the environment variables TMP, TEMP and/or TEMPDIR pointing to an appropriate temp directory. /tmp is usually a good one, assuming you've got such a symbolic link. The CAB-for-MintNet overlay requires a temp directory; if it can't find one, you get the above error.

Mario,

I had the same problem. I'm afraid that my solution was to use an editor
that doesn't use a resource file...e.g., Edith Professional. This has
worked out very well, as it's a fine editor. I tested Everest, too,
before settling on Edith, and that works OK with Antmail, too.

Good luck,

Shovelled out from under all that snow yet! :^)
Any Art program that uses GDOS will have an HP driver via either
SpeedoGDOS or NVDI-GDOS. I assume s/he does not have a Falcon,
there is Munch(mono only), Seurat, PixArt2, MegaPaint, True Image,
True Paint, Easy Draw, InvisionElite(colour), Outline Art,
Kandinsky, . . .

As one of the PD companies that Atari threatened to unleash their
legal department on, I can assure you that Joust is most definitely
NOT PD ... but there is a similar game in the PD called 'Wing Lord'.

My memory may be failing but I believe they threatened libraries about
Neochome Master too. We certainly felt a strong compunction to
withdraw it from our lists.

My friend wants to sell me his 520STE and wants to know how much it is worth.

I'm not sure about the specs, but I know it has half a meg of memory, no harddrive or monitor or anything -- just the computer.

So how much do you reckon?

Cheers,

James Cox.

This sounds like a timeout problem. Change the timeout values in the
Server Preferences dialog (Preferences Menu) to something larger, like
30 to 45 seconds. This should allow NEWSie to wait until the server
is ready to send the list.

If this doesn't help, send me a copy of the LOG file created by
NEWSie. This should help determine what the problem is.

# 1775. "THE" original Atari ST Prototype

Newsgroup: comp.sys.atari.st
Date: 1997-01-27 00:00:00 UTC
From: Curt Vendel <cvendel@fir.fbc.com>
Message-ID: <32ECE006.2781E494@fir.fbc.com>
Source record: 129145

To anyone interested in a true museum collectors piece:

The first made Atari ST:

This is the hand wire wrapped prototype of the Atari ST line of computers, this baby is HUGE, it consists of 8 prototyping motherboards that measure about 2' X 2' each with a 1/2 dozen small interconnecting boards to interfaces the main modules together. The entire unit requires a large table to fully assemble and examine, the entire unit is both impressive and almost breath taking when assembled.

I have come across this rare find, however I am not an ST collector and this item will do better in the hands of a collector who appreciates such a rare item.

Please make all offers to: cvendel@aol.com

The 2nd item I have is a very nice prototype, about 2' X 2', this is marked ATARI EST, it is infact the prototype of the Atari Mega STe system. The unit is quite nice and has some very interesting handwired areas, an excellent board to examine.

Please make all offers to: cvendel@aol.com

Curt

>room-based systems.

Rich,

Foresight is still being actively developed (I'm one of the beta sites), do you know where I could get more information on Octopus (is there a support page?) I'm setting up a web page for remaining ST-Sysops (mostly) to list what is left of the atari bbs packages/doors, what's developed, what's dead, what is good, etc., and need lots more information!

Any help by anyone reading this is appreciated, btw.

www.inwave.com/~mccallum/ is where it will be/is...

Cheers, Andy

a pint?
:^)
An STe is worth more than a ST for 2 reasons
1)easy memory upgrade
2)colour and sound enhancements
say 75 pounds?

The ST's have a cartridge port on the side, that cartridge port was very veristal and they may have (Atari) made provisions to allow you to boot off of ramdisks and such connected to the cartridge port.

>Lasse Eldrup, popped up at regular intervals, and uploaded more files

Not only national, but from another country was he not :)

>than local users! Others like Dale Wright made a telephonic journey of
>over 300 miles every day to collect and send mail, despite having Atari

Ha yes Dale...he will be heartbroken at this ?

>many, but there has to be space to mention the incredible Jessica Long.
>We really don't know who she is, but she called the BBS faithfully over
>3 years, almost every single night! Her fast wit and charming message

and her tag lines? I have to admit to skimming through a lot of her
posts just reading the tag lines....winnie the p.. hehehe

>must be grateful to all Atari BBS SysOps for their continued dedication
>to the market, along with the hard work of guys such as Daron Brewood.

Too true, well said Frank

>Finally, to anyone who ever called Ad.Lib - if you enjoyed the BBS, then
>please do let us know. If you have any tales to tell of your early
>Ad.Lib experiences, please tell us - we'd love to create a memorial to

Well I had a wee problem with Adlib and could not seem to get it
sorted, can't recall the details exactly,I had never spoken to Andy
Curtis in my life as I live miles away in Accrington... but one sunday
morning I was sat at home and the phone...

RING RING

Me: Hello
Phone: Is that Mr Greenwowwod blah blah
Me: Yes Speaking
Phone: This is Accringtom Police Station and we wondered if you could
spare a few moments?
Me: <gulp> certainly ?
Phone: we are trying to varify the whereabouts of certain people on
Tuesday last, 8pm'ish can you tell us where you where?
Me: eeerm eeerm what? eeerm dont think I went out ........ couple of
minutes explanations as to what I was doing
Phone: ho I see? well according to our records..let me see..
Me: well blah blah blah
Phone: Its only me Andy Curtis, Sysop of AdliB calm down hahaha
Me: Long pause.....BARSTEWARD!

And that was my first ever encounter with Andy...and I still haven't
got him back yet :)

>the BBS, probably in the form of a website. Both of us will still be
>knocking about - we both turn up on the IRC channel #atari with alarming

Will you be at the ATARI shows, you and Andy?

It isn't, though - Neochrome Master was another program which Atari told
PD Libraries, BBSs etc to withdraw a few years ago as it infringed their
copyright.

ATB, Frank.

That's going 'round Robin Hood's barn to get there, and still won't
necessarily solve the problem, although it will give him a better
opportunity to repeat the print attempt quickly if it fails.

Basically the killfile specifies automatic rejection based on a match
in the header. Something like the following ...

Newsgroups:*comp.sys.atari.advocacy*
From:*sinclap*
From:*jedi*
Subject:*jpg*

.. but I've no idea if there's an RFC on killfiles or not. I doubt
there's any rules on how you perform the match (seems to be a GREP
type pattern match defaulting to case insensitive) or any rules on how
the KILLFILE is structured, but I guess there would be something
specified on what NNTP rejection code should be passed back to the
news server, possibly 435 or 437?

Matter of fact, yes. I saw some kind of survey going on on TV, I think it
was QVC or something and there was a room full of people sitting on
computers. I think they were taste testing alcohol or something and anyway
They were checking radio buttons and I glanced at it closely and I immediately
noticed the familiar screens. THey apparently had a room FULL of 1040s and
they were using high rez monitors. But I mean there was a TON of them.
heee hee. That woudl be cool.

>recommendation you may have.

The Portfolio fits in a coat pocket, runs MS-DOS (version 2-something) on ROM, and has a port similar to (but different from) a PCMCIA card port for interfacing other things like printers, added RAM, hard drives, modems, and so on. The display is, IIRC, 4 lines of 20 characters on an LCD panel.

The STacy is a full portable ST system with a high-rez mono LCD display in the lid and (optionally) an internal hard drive. Excellent machine for road trip musicians!

The only real relationship between the two machines is the fact that both have an LCD disply, both are battery-portable, and both were made for Atari.

Mario, just put a copy of the editor and the RSC in the Antmail folder.
Clumsy but workable. I suspect you are using TOS <1.04 - I didn't have any
such problems with TOS 2.06 nor 3.06.

>So how much do you reckon?

Dunno what things are going for in Merry Olde, but you can upgrade that 520
STe to 4 megs for a pittance now, as it uses 30-pin SIMMs. Those are
running about US$7.50 per meg these days.

A 4-meg STe here in the US goes for around $125 used - you can get 4 megs of
RAM for about $26, so an offer of US$95 to 100 seems fair to me.

# 1796. Re: State of the World of Atari?

Newsgroup: comp.sys.atari.st
Date: 1997-01-27 00:00:00 UTC
From: greg_evans@delphi.com
Message-ID: <plF1+1p.greg_evans@delphi.com>
Source record: 129166

Al,

Well, the Atari marketplace has been both quiet and busy the last couple of years. Quiet, in that most of the developers have left the Atari market. Busy, in that those that have remained are producing some of the best software ever written for Atari. Here are some examples:

GRAPHICS: Apex Media, DA's Picture, DA's Vector Pro, Arabesque 2, Positive Image, Photoline, Imagecopy 4.
WP/DTP: Papyrus 4, DA's Layout TC
DATABASE: Twist 2 (in German, Twist 3)
SPREADSHEET: Texel
UTILITIES: HD Driver 6, Diamond Back 3, Diamond Edge 2
DESKTOPS/OS: Neodesk 4, Geneva, Magic 5, Ease 5

Above are all commercial products, some of them as good as anything, anywhere! There is also plenty of freeware and shareware around, incuding a suite of intenet software for browsing, emailing, FTPing, etc.

Some of the major shareware and freeware programs are:

ST-GUIDE: Hypertext help system.
OCR: Optical character recognition.
GEMVIEW: Graphics viewer/converter.
KANDISNY: Color vector graphics program.
FAMILY TREE: Family tree database.
UDO: Hypertext conversion software.
LINUX: 68030+ implementation of Linux (unix) OS.
CDP: Audio CD player.

Believe me, I am just scratching the surface here. I know of at least 7 German CDs of shareware/freeware, 10 US/UK CDs and ther are even drivers around for some DOS/Windows CDs, such as Grolier's Encyclopedia, Toatl baseball, etc. These last items are commercial products. Even with some overlap between the CDss, there is a good 5 gigabytes of quality shareware and freeware software out there!

Hope this gives you some idea of what's out there.

Anyone elsem feel free to add your own favorite programs to this list.

Greg

Your best best is Imagecopy 4. It is a graphics viewer/converter/
cataloger/print program with some of the best printer drivers around.
It can handle Degas, as well as most other Atari, PC and Mac formats.

Hello,

take a switch and cut off the Adressline no. 9. Best between the resistor and
the RAM-bank. Then install the switch with very short cables.
Switch ON = 4 MB, switch OFF = 1 MB.

# 1799. Atari IFF Files Conversion

Newsgroup: comp.sys.atari.st
Date: 1997-01-27 00:00:00 UTC
From: rsrice1@ix.netcom.com
Message-ID: <5cj4vv$i6n@dfw-ixnews8.ix.netcom.com>
Source record: 129169

AAAAAARRRGH!

All right--it's like this. I started with Neo, worked my way through the DEGAS'es, and ended up with Deluxe Paint ST, better than which I have not yet found on any platform. Damn it, anyway, though, I had to go to a PC.

Naaooow... HUNDREDS of files in that DELUXE PAINT ST compressed ATARI, notnotnotnot AMIGA IFF format. Those are compressed with 'Byte Run' compression, sayeth the manual, THESE are compressed with VERT WORD and nearly as small as TNY files--and that's why I have so many of them.

And NOTHING, NOTHING but Deluxe Paint ST, the cranky Deluxe Paint viewer, and a program called GLEE by one David R. Mace could ever view them. And the mouse disappears when I try to run THEM with Gemulator/MagiC! Even GEMVIEW thinks that they're AMIGA IFF and cannot, cannot, read them. The same is true for LESMICH and even the PBM utilities.

I need a convertor. Oh, gad, do I need a convertor.

Naaaoow... We're working on one. I get it, I post it, and that's good news for EVERYBODY. BUT THERE AIN'T no information availible on VERT WORD compression. That nifty FAQ about Atari Graphics formats? It's the AMIGA version, folks.

HELP! HELPHELPHELP! Anybody know ANYTHING about this format? Stephen White, are you OUT there? Has anybody written a graphics convertor for the format? GIF, PCX, I'm not fussy--I JUST NEED Heeeeeeeellllllllp!

We now return you to your regularly scheduled programming.

## 1800. cheap software, last chance

>will do full VT100 or higher. I've tried a number of programs which do
>ANSI, rather that a true VT100, and display wierd codes, jumbling up the
[...]

I would recommend CoNnect. It allows you to choose between VT100,
VT102 and ANSI (among others) and it seems to support all these
emulations very well. It even supports TEK-4014 graphics emulation.

CoNnect also seems to be very fast and can be configured in all sorts
of ways. It does have inbuilt ZModem support. I could go on and on
about all the things CoNnect is capable of, but you would be better
off getting it and seeing for yourself. CoNnect is shareware and I
beleive version 2.46 can be obtained on a.a.u.e.

BTW, I'm posting this message on someone else's account using NEWSie

I keep getting Error #600 when trying to connect to a website using STIK/
CAB. Can anyone tell me what I might be doing wrong and how I might fix
it.
THANKS

And the Mac was a follow-up to the Lisa. As I recall, the ST shipped before the Amiga, making it the first color 68000-based machine. The 1040ST was also the first 1MB computer to retail for under $1,000.

I don't really think you can say any 1 computer was truly first. Many computers--back in the days when choice was an option in computing--qualify as first in one area or another.

>And the mouse cursor was invissible when text was coming in.

Well, I'm not quite sure what you're talking about- perhaps you're talking
about an occurence when using a colour display? I've been using Connect in
hires mono and it's been looking good from here.
It's not any slower than any other GEM program regarding the display.
I guess NVDI will help increase speed however, in all GEM programs.

Hallvard,
LHARC 3.12 is the actual program, as opposed to the shell. Use it to
replace the LHARC.TTP in your earlier version. It will work fine with
the old shell.

The STacy is basicly a portable ST in a notebook style case, it's
still pretty heavy, but works for those whom need an easy portable ST
for MIDI or other applications, it has a built in monochrome
equivilant screen, a 3 1/2 inch floppy, and was powered by the
68000 at 8 mzh.

The Portfolio was a small handheld computer, which Atari purchaced the
rights too and sold, It was pretty powerful for it's time, but is
really limited by it's size and screen display. It's great if you
travel alot and need something to keep notes in, but you can't run
any major applications on it due to it's small 40 column wide screen
and 256K memory (I believe) which can be upgraded. A former dealer
located where I use to live was well known for these upgrades to 512K
or 1 Meg on the Portfolio. This is powered by somethink like the 8088
or equivilant (IBM clone).

What are your needs and perhaps I or other's here can give you some
advice on what might be best suited for you.

## 1815. Programming ideas

|Hi Tom!

| td> to 'go to school' periodically. To make this more interesting, one of

| td> our instructors teaches a class in 'Programmable Logic Controllers'

| td> (PLCs). These are programmable logic black boxes (usually with

| td> 68000s, btw!) used for motor control and the like. During this class

| td> I found that someone had done DOS software to program these

| td> controllers, via a RS232 port. It didn't look too complex; maybe

|I assume that all you have to do is send the binary file out of the serial

|port to the programmer from a terminal program??

Umm... I don't think I was complete enough in my explanation. The DOS software includes a graphical representation, called a 'ladder diagram', that has symbols for the various 'virtual components', such as switches, timers, and the like. By building the 'ladder', one writes the program for the Programmable Logic Controller, and _then_ ships it to the PLC.

It seems to me that the software in question was proprietary; that is, it was written for just one line of PLCs. That being the case, one would have to start with just one line (I would hope a popular one) of PLCs, and would then branch out into other brands. Lot of work, not much reward.

Thanks for the interest!

|what software the system is running. ?
Our local (Boise, ID) HobbyTown store uses a Falcon and a MegaSTe for cash registers. They are running SuperBase Pro (or so I am told).
Other 'sightings':
A local private school (PCS) has used STs for years, and only recently started changing over to PCs. They used Robokit, the Midi Music Lessons, and other applications to teach. They also had some 130XLs and other 8bits in years past. If their Robokit boards hadn't all been thrashed, they would probably still be using them, according to an employee to whom I spoke.
My son was given 'Music', an 'Eyewitness' book about musical instruments, which is mostly pictures. On the 'computer music' page (62) is a picture of an 'ordinary home computer' (an ST) and a disk clearly labeled MIDI-Track ST. Of course, the book is copyright 1986, which explains it. The picture credit is to London Features International, Ltd.

Hi Simon
as far as I know the version of Notator that comes with Logic will not
work on the TT. After trying for a while after I had bought the
program I called sound technology and they said that it catagorically
will not work.
Should you find anyone who can get it to work then I would be very
interested as I have to exchange midi files with a notator using
friend, and it would be a lot easier to exchange notator files.

if it were a hard drive partition and each of the remote drives partitions as if they were folders. I use the Midi Port connectors and the system is highly reliable other than not liking FoReM. It is not very fast, but it gets the job done. Direct printer sharing is not supported (or I don't know how to do it), so I just transfer the file to be printed over to the Mega and print from there.

: >

If you can't find a portable, or would like more performance for the buck,
consider the following...

You could get a PC or Mac (for now lets say portable) and run MagiC Mac,
MagiC PC (or Gemulator for the PC), which emulates the ST. One option
that lets you continue to get the most from your Atari investments and
ease into Mac or PC world at your own pace.

Or, you can get another ST/TT/Falcon machine on the cheap someplace and
simply get an external hard-disk that you can carry back and fourth. In
addition to this...take advantage of modem technology and leave the
ST (or any other computer for that matter) at your work-place in "answer
mode" when you go home from work. This way you can simply dial up your
work computer and grab or place any files you need. Same applies if
you need a file from home while at work...dial up your home ST and
grab the file.

It is very possible you might find a complete ST or STe with monitor for
sale in these use-groups for well under $100. I've yet to see a STacy go
for less than $400. Wish I had one though! Excellent machine for
a traveling musician :)

## 1822. What books are good for learning 68k asm?

Newsgroup: comp.sys.atari.st
Date: 1997-01-28 00:00:00 UTC
From: Brian Hutchinson <hutch@ena-east.ericsson.se>
Message-ID: <32EE415B.41C67EA6@ena-east.ericsson.se>
Source record: 128972

Hi,

I want the learn the ins & outs of programming my Falcon in
assembler. Would anyone recomend a good bood on 68k programming
in assember or 68030 in assembler? A book that is still in print
specific to the Atari would be nice but not required.

Thanks,

Brian

## 1823. Do I have the latest Devpac?

Newsgroup: comp.sys.atari.st
Date: 1997-01-28 00:00:00 UTC
From: Brian Hutchinson <hutch@ena-east.ericsson.se>
Message-ID: <32EE41F8.167EB0E7@ena-east.ericsson.se>
Source record: 128973

I recently purchased Devpac 3 for the Falcon 030.
I think the version is 3.10 (I don't have it in front
of me at the moment).

Does anyone know if this is the latest version or if
I need to get some updates from somewhere. I think I
remember seeing some files on UMICH that were about Devpac.

I also bought Devpak DSP for the 56k. Do I need anything
else to write code for 56k?

Thanks again,

Brian

>programmers to programme for TOS 1.0!

Please explain what forces me, with TOS 2.06 and 3.06, to program for TOS 1.0 - so far, I haven't written anythign that won't run on TOS 1.0, but I also included hooks to check which version of TOS I am running under, and use the "new" features if they are available.

Only an incompetent is restricted to TOS 1.0 programming; or someone who didn't bother to (a) upgrade his TOS or (b) register as an Atari developer. In fact, while he would not be able to test the results, it is perfectly possible for a programmer using TOS 1.0 (or even 0.98!) to write software that takes advantage of later versions. And there's hardly a lack of people willing to test such software - look at the traffic in here.

It works for me when I use a dial-up connection; if I try it via Telnet,
however, it locks up my terminal, so apparently it's more than a bit quirky.

Source record: 128981

Robert's Revised Dictionary defines it as "a pimple on the butt of humanity which, while not fatal, results in much irritation to those who merely want to exchange information in a genial, cooperative manner."

Peter; grow up. Learn to spell (or learn to use the spell checker on that MacDonald's computer you seem to think is so great). Learn to reason; you are connected, in some obscure way, with an institute of higher learning. Try auditing some of the classes. Don't make me come down there, and jam a hockey stick up your hard drive so hard it pokes out through the monitor. Go home, and learn to DO SOMETHING with your computer!

Hmmm, some software was badly written, and you come up with a hardware
solution (which incidentally can totally disable the computer if it's done
poorly).

Do you work at MicroSoft? ];^)

# 1836. Howto for Gemulator Classic (freeware)

Newsgroup: comp.sys.atari.st
Date: 1997-01-28 00:00:00 UTC
From: Tom <the.northerner@awinc.com>
Message-ID: <32EE5D9A.4A02@awinc.com>
Source record: 128986

In case anyone missed it in the emulators newsgroup, a gentleman was
kind enough to post how to make Gemulator Classic (recently released as
freeware) work with Tos 2.06.

I believe the thanks goes to William Jones for posting the following. I
have tried it with tos 2.06 and it works. I used dumptos to dump the tos
1.2 from my mega and it did NOT work. Note William says it does not seem
to work with magic_pc.os, but I have not tried that yet.
No, you don't need a card. Put GEMUL8R.EXE in the same directory as the
> Gemulator 96 demo. You need the virtual disk images that it contains.
> Here is the content of my GEMUL8R.INI file that should go in the same
> directory. Edit to your own specs.

From: Tom <the.northerner@awinc.com>
Message-ID: <32EE5F64.57DF@awinc.com>
Source record: 128987

I must say, I really like Gemulator Classic and the full screen emulation. Although last night, I loaded up Xboot, Geneva and Neodesk 4 on it.

Everything seemed to work, but somehow during the fun I was having, I managed to corrupt some files on the hard drive. Also, it showed my Neodesk 4 master disk as being corrupted (worry) but when I checked it aftewards, it was fine.

Tom

## 1838. Alas alack, windoze95 beckons

Newsgroup: comp.sys.atari.st

Not to make you sound stupid or anything like that, but have you
terminated the external device (either thru haveing terminating
resistors on the drives and/or an external SCSI terminating plug.

I have a TT and it's so much easier to setup SCSI devices on since I
got it over my Mega ST4 with ICD Link or even AdSCSI host adaptor.
Seems the TT takes about any SCSI signal, except for the
Quantum 1 gif Fireball that Quantrum sent me for my failed under
warrety LPS-540 meg drive. Miss that drive, it was FAST!!.

Or perhaps there's something wrong, have you tried different SCSI
cables? i've heard of problems with just a defective cable or bent
pin in the plug.

Apparently.

>The whole design of the ST was always bizarre to me.The absence of a
>textual display being the biggest one.Next to that is trying to be like
>MS-DOS.(yuck!)

Well, let's try this:

Atari and Commodore have never had any business relationship whatsoever.

Jack Tramiel was once CEO at Commodore, and after being ousted by the Board
of Directors, purchased Atari from Warner.

The Atari ST was more-or-less his brainchild (although, obviously, he didn't
design it himself).

The lack of a "textual display" means that it wasn't necessary to come up
with some wierd kludge to convert a text-based word processor into a
grpahics engine (like IBM eventually did, and now, some 12 years after
introducing the IBM PC, the average Intel-based system has roughly similar
capabilities that an ST had in 1984/85).

I have no idea what you're attempting to say by "trying to be like MS-DOS."
You may be referring to the file system - which was based on CP/M, the only
real "standard" there was when both IBM and Atari were selecting an
operating system. Probably more by luck than any other way, TOS and MS-DOS
ended up with compatible file systems - which turns out to be very fortunate
for many Atari users. IF you don't happen to like it, that's fine -
everyone is entitled to an opinion.

But this is appraently an advocacy issue, so I have set followups.

Quite right although I don't recall Rich posting to just the advocacy
groups of late but seeing as there is just one major cross-posted
thread there, this is not surprising.

>
>Your conception of what entails spamming seems to be rather different from
>most other people's, by the way. Having a few too many newsgroups
>included in the header is different from intentionally trying to shove
>your message into every group possible.

Yeah, the meaning of Spam is regularly being widened to include many
things. This falls under the "off topic crap" banner.

>I personally feel that the threat of cutting Peter's entire uni.edu domain
>off was excessive, rude, and an obvious attempt at bullying him into
>submission.

Also a threat I would think was as idle as very idle thing. Not
through lack of trying, I'm sure Rich would do his best to cut off the
domain but I somehow doubt off topic postings to a single group (and
not entirely off topic) warrants the cutting off of an entire
university! I don't know anything about this person you know (Chris
Lowe?) but if he has these sort of powers then I really hope he isn't
the pedantic fuckwit you imply him to be and I'm quite confident that

he isn't.

>Peter is annoying, but he is incredibly well-behaved compared
>to the sort of people who have gotten entire domains nuked in the past.
>Only an extremely objectionable act can justify cutting off thousands of
>users just to get at one offender and an uncaring sysadmin.

I would like to make it qite clear that this does belong in the
advocacy groups and this is the only posting of many on this thread
that I have also cross-posted to the general group so appologies for
this being off topic.

I think you are _really_ confused.
Tramiel did Commodore, Nolan did Atari.
Tramiel left Commodore, bought Atari, voila la ST!
Commodore still existed after Tramiel left (for a while anyway :^)
ha ha
abscence of textual display??!
oh dear
NeXT to that is trying to be like MS DOS???
are we talking about the same computer system??

Hi you all:

I was -probably- messing with the assign.sys file. Now Paryrus
doesn't want to print; it reports:

Gdos driver MEMORY.SYS not found
It should be present in the "ASSIGN.SYS"
file with the device # 61

When I boot, I can see that MEMORY.SYS is loaded. I run NVDI. My
ASSIGN.SYS includes the device #61

PATH = C:\DRIVERS
1P SCREEN.SYS
2P SCREEN.SYS
3P SCREEN.SYS
4P SCREEN.SYS
5P SCREEN.SYS
6P SCREEN.SYS
7P SCREEN.SYS
8P SCREEN.SYS
9P SCREEN.SYS
10P SCREEN.SYS
21 FX80.SYS
31 META.SYS
61 MEMORY.SYS

What's wrong with it? Could you check yours please? Atari Works
doesn't have any problem printing, and it uses all the fonts that papyrus
uses. I have MEMORY.SYS and the same ASSIGN.SYS in 3 places
C:\
C:\DRIVERS;
C:\GDOS.
Nothing happens :(.

# 1846. STIK, Still alive??!!

Newsgroup: comp.sys.atari.st
Date: 1997-01-28 00:00:00 UTC
From: gerdw@wa.caeci.ol.ni.schule.de
Message-ID: <HA3DBEVIUP@wa.caeci.ol.ni.schule.de>
Source record: 128996

Hello!

Does anyone know, if STIK is still alive?

I heard nothing about it for a long time.

Will we get CSLIP or PPP any time?

Greetings

Gerd

-2 Atari ST ergonomic joysticks

I have a couple of Atari ST Joysticks that I no longer use.
They are both the ergonomic type that fit in your hand
(your hand wraps around the body of the joystick) and your
index finger triggers the 'shoot' button. Anyway, if you're
interested, let me know.. I probably paid $50 a piece for 'em
way back in the 80's, but obviously they're not worth that
much now. Make me an offer.

-Sim City Atari ST

I have the original disk, packaging, and code sheet (their
version of copy protection). Make me an offer.

-Micro League Baseball ST

I believe I have all of the original packaging for this
game except the original box. Comes on 3 floppies.
Make offer.

I understand a patent expires after 20 years no matter if they exist
or not. Copyright exists for 50 years after the authours death so as
far as companies I have no idea, but sadly I'm pretty sure it's still
a crime.

>edit with a tesxt editor; that way, if the user has selected "Path:" as a
>kill line, he can pick out just the server(s) to kill (can you say
>"CyberSpammo?")

The way NOS does this seems quite a god way to do it. It is an ascii
file, to use it you jst give the header line and the pattern you don't
want enclosed in wildcards, any line begining with ! is kept even if
other rules say it should be killed. A snip from my killfile:

From: *howardk@netcom.com*
From: *quanwei@cyberway.com.sg*
From: *theweb.demon.co.uk*
!Subject: *walkthrou*
!Subject: FS:*
From: *Ambassador@FourthWorld.com*
From: *chrisb@apiltd.demon.co.uk*
Subject: *N64*

Subject: *which news group*
Subject: *awsome prices*
Subject: *charter*
Subject: *mod chip*

It seems a good way to do it, it appears to offer complete
felexibility as you don't need to specify the header line, it's just
treated like normal text.

>Thanks for the info. Is Oasis a reliable program nowadays? My last experiences
>(a few months ago) were not too promising on my falcon.

I expect you tried Version 2, most people prefer the older Versions
V1.35 or abouts, these use the NOS program for the online stuff which
is quite good for most uses. And it's very stable, Oasis has quite a
few bugs that cause it to crash, most are avoidable, they normally
happen when you ask to do something and then change your mind or when
Oasis has not indexed a group properly. No data is lost, just double
click and 2 seconds later Oasis is back, it's not really a problem.

I didn't expect any Killfile RFC and a quick search of the index
suggests that one does not exist, it's not the sort of process that
requires a RFC really. The only thing that need be RFC compliant is
how it decides go get and not get the articles.

We are talkning killfiles (filters) rather than cance/control
messages. With a killfile the headers are downloaded and processed
according to the rules set in the killfile which decides if the
article should be fetced or not.

: >And the mouse cursor was invissible when text was coming in.

: Well, I'm not quite sure what you're talking about- perhaps you're talking
: about an occurence when using a colour display? I've been using Connect in
: hires mono and it's been looking good from here.

Well obviously you can't get a colour flicker on a MONOCHROME monitor!
Anyway,it's a moot point since you're only using one bit-plane and hence
there's no other bit-plane for it to be out of phase with.

: It's not any slower than any other GEM program regarding the display.

That's sort of the point.It's a GEM programme and inherently slow.

: I guess NVDI will help increase speed however, in all GEM programs.

I keep seeing "NVDI" mentioned.What the hell is it?!?
(can't people usde English anymore;what's with the codewords!)

I have something called TurboColor that seems to speed up the GEM
filemanager and ST BASIC.I wasn't using it at the time,but the 14-line
limit makes the point moot.

There is a GFA to DXF converter somewhere, a copy was on one of the ST
Format cover disks.

It had a limit of (I think) 64K on the file size.

: It is implemented as a shared library.

Then it's application level,since it's part of the process's code section.
(and and data and bss)
At least from a UNIX point of view.I didn't think they had libraries on
the Mac.(unless you're counting the "resources")

: >How would I delete more than a single line with PICO!?!
: >(PINE's editor)

: Change the editor to vi.

How do I do that from Tin 1.2 PL2?

I always wondered why sysops never wanted you to have access to vi.
I assumed it was because they didn't want you shelling to DOS,but it
seemed to me that changing the "SHELL" varrible to "/bin/true" (or
whatever) would keep vi from running "sh".(or whatever)

Of course I don't know if there's anything that would keep you from
writing out the file to a different name.

You could have the BBS (or Gopher,in my case) run vi as a user-id that has
no meaningful access,but with the same group-id as the edit-file.
(which would have the user-id of the BBS)
Then,even if you could hack your way to a shell,it would be pretty damn
useless.

: >
: >Once again,this could be implemented as a shared library or server process.
: >(you might have to add simple rudimentry functions to the graphics driver
: > like the ability to allocate and find the graphics memory buffer)

: Many microkernel operating systems implement the *file system* as a user
: mode process. Does this mean that the file system is no longer part of
: the OS, just because it doesn't execute in the kernel address space or
: supervisor mode?

It's a device driver.

By that logic,a FTP server is part of the OS because it can be use by more
than one process.The same goes for grep.
(awk goes under the heading of "programming language" really)

: QT is in fact a set of shared libraries. Nonetheless, it is a service
: offered by the Mac OS to application programs. The main reason QT is
: implemented that way is so that it doesn't needlessly occupy memory while
: it isn't being used.

(hmn,I guess I should've put the previous after this paragraph,instead of
before it)

It's a service of a shared library.It's like saying that your term programme
is a "service offered by a OS".

: >: BTW, next time you reply to something, please trim the parts of the post
: >: you aren't responding to.
: >
: >How would I delete more than a single line with PICO!?!
: >(PINE's editor)

: I really haven't the faintest clue. PICO is nice and easy to use, but it
: seems to be deficient in capabilities. Not that I'm a wizard with UNIX
: text editors; I refuse to learn vi unless I really have to and I know just

: enough EMACS to get by.

Are you kidding,it's a nightmare.No commands/key-bindings to go to the
beginning/end of a line,nor to skip words.I'd rather use vi!
I used Elvis on the PC (with Linux and MS-DOS),it's even better!
OF course now I'm stuck with using the Atari ST and HCS.
The ST has a fast enough RS-232 port,but term programmes want to use the
GEM interface.
(also no text mode,but HCS 80-column term programmes use graphics mode anyway.
Of course they only have to scroll a 8k screen.Ice-T does this by memory
indirection(it simply tells line 24 that it's now line 23 and so forth)
Flicker-Term uses two alternating 40-column text screens to achieve
80-columns)

And my Atari has no good RS232 interface.A fixed disk drive would be nice too.

I guess I'll use Uniterm once I figure out how I get it to run XYZ so that
I can use Z-modem.ANSITerm (with it's 320x200 display) till then.

: (followups set to comp.sys.atari.advocacy, since this belongs there)

I can't get that.

>using a 2.06 disk image TOS. Any input greatly appreciated. (I gotta
>play Time Bandit again!!!)

Oids at least was heavily copy-protected, so is hardly going to work if loaded from a PC disk drive. I suspect Time Bandit was protected too, and Tower Toppler (aka Nebulus?) was as well. I've tried Gemulator with some, ahem, backups and they worked okayish. Speed's a bit wobbly, crashes quite regularly. Unfortunately all the old tricks like using the border area (50/60hz flick) and swapping the colour palette to give more colours don't work properly; the former doesn't work at all, the latter is too slow, they aren't synching it right.

: Of course it is. Whether Atari themselves exist or not, copyright is
: still valid for something like 50 years unless Atari were to place TOS
: in the public domain.

Which,of course,is utter rubish!

TOS is what makes the ST GO.If you restrict distribution you force
programmers to programme for TOS 1.0!
Rather than that,they'll probably just make it so it won't work with old
STs or they'll violate the OS like everybody does on the PC.

Look at the Atari,DOS usually came on a game disk (depends on the
game),and always with a new disk drive.
And while the OS was in ROM,it was a cartridge that could easily be
swapped out.

The newer XL didn't have the cartridge ROM OS,but it had RAM under the ROM
which meant that you could load OSes from disk.Even better!!!

I assume that TOS is re-locatable,so I assume you can load other TOSes
even on a machine with TOS built-in.(but it's kinda huge)
Isn't there a OS that's like TOS but with no multi-tasking or anything
else to get in the way?
Of course games probably wouldn't work with it.The same problem occured
with the atari but Atari corp. simply distributed a disk with the old OS
on it.(don't know how much it was,though)
And "translator" OSes are available from PD/shareware sources,as well.

That's the nice thing about Linux,it's completely FREE!!!
You can always imediatly upgrade to the latest version of systemic programmes.

As I pointed out before, many microkernel operating systems (including
microkernel variants of UNIX) implement their file system as a user
process. By all reasonable definitions, the file system is part of the
operating system. The address space and CPU mode a piece of code run in
do not determine whether it is part of the OS or not.

Curt,

The prototypes for the ST and the STe sound most interesting. I would urge you to contact the Computer Museum in Boston to see whether they would be interested in adding one or both to their collections, where they would be preserved for public exhibit and historical research for future generations. Should you be in a position to donate, this would be tax-deductible (to the extent provided by law). You can find their collecting criteria at:

http://www.tcm.org/history/donation-cri.html

(The Museum's history timeline on the web page isn't up to 1984/85 yet, but I would nominate
the ST prototype as a possible addition.)

Cheers,

Can someone help me on the lascan program. Someone told me it is for a Falcon only but I am not really clear on what it does. I think it is for the auto-switch overscan but I don't even know what that is.

I also downloaded an ET4000 upgrade thing. I know you can buy the Panther which uses the ET4000 card or you can actually build an ET4000 adapter for the mega ST's DIY port. (I assume the port beside the processor). Anyway I am pretty capable of making upgrades etc. so I need someone to convert it to english from german and to explain to me just how it works. Thanks alot everyone.

Please do not send email as I can' read it right now :)

The statement is correct - I assume you mean that it is not good that it
is true?

>TOS is what makes the ST GO.If you restrict distribution you force
>programmers to programme for TOS 1.0!

Yes, unfortunately this is true. The ONLY reason that many of the features
that have been added to the AES/VDI (toolbars, offscreen bitmaps, list-box
objects etc.) are not used in most programs is because they have to support
the old versions.

If you dont support the old versions people moan, so many programs simply
make no use of the new features. The Behne brothers have released freeware
programs WDIALOG and ENHANCER which add extra AES/VDI features to old
versions which has helped, but still many programs make no use of these
extra features. :-/

[WDIALOG adds MagiC features to other AES's, and ENHANCER adds NVDI features
to old VDI's.]

```
Maggie Issue 22 Release
-----------------------

The Maggie team are pleased to announce the release of issue 22 of
"Maggie" a FREE disk-magazine for your Atari computer, with news,
reviews, interviews, humour and programming help (amongst loads of
other things)

The requisite files have now been uploaded to ftp for your enjoyment:

magg22st.zip (754,885 bytes) ST/Falcon version
magg22f1.zip (1,001,236 bytes) Falcon-enhanced version
magg22f2.zip (557,915 bytes)

...and have been put on the following sites:

Probable directory:
ftp.uni-kl.de (pub/atari/diskmagazines)

It should also soon be on the following (when the upload stops
crashing out on me):
ftp.cnam.fr (pub/Atari/incoming)

If you have problems with download, or want it put on another site,
please contact us and we'll do our best to make it more available.
At a pinch we can email it or something...

## 1881. Adding SCSI Devices

Newsgroup: comp.sys.atari.st
Date: 1997-01-28 00:00:00 UTC
From: mlake@melake.erols.com
Message-ID: <slrn5erggv.d5a.mlake@melake.erols.com>
Source record: 129047

I have a TT and I've had ongoing problems adding SCSI devices to the SCSI port. I've tried attaching a CD-ROM drive and other hard drives and have never been able to get them recognized by the system. I've tried attaching these devices while both removing and leaving in place the terminators on the internal port board to no avail. In the past I've given up with each device I've tried to connect to the SCSI port and instead have attached them to the ACSI port successfully in each case. But now I need to attach a flatbed scanner to the SCSI port. And again, I haven't been successful. Can anyone tell me what I might need to do to get a device attached to the SCSI port?
TIA.

Brian,

If your looking for a STacy, call Bruce at B&C Computervisions, he has them for $499, he may even have them still in the original boxes!

Now if you really want a HOT Atari ST item, try finding yourself an Atari ST Book laptop, its basically a STacy, but it only weighs 5 pounds! and its about 2" thick, its a truly beautiful laptop. It took me 5 months to track one down, not an easy task, its even harder since most of them were sold in Europe and only a small handful (about 30-40) were made in the English/QWERTY versions.

408-986-9960 (B&C Computervisions)

Curt

## 1883. Tos Loader

a > I've been getting killed over and over by the tyranasarous rex
a > or what ever it is.

1) You will first need the flare gun. It is found in the SW corner of the lava desert, which is entered via the tunnel in the SE corner of the cactus desert, past the two baby T.REX's (who are relatively easy to kill) and out the south end of the big cavern.

2) Go into the swamp, pick a good spot to fight and save. (I went to the north end of the Amazon village and faced south.)

3) Wait until dark. (Set you alarm and sleep.)

4) When the T.REX is visible but still some distance away, USE the flare gun (don't AIM it). If he gets you from behind, restore and face the other direction.

5) After the T.REX freezes, walk up and hack him to death with your hatchet. Arrows & spears are a waste of time, and you will need to save the laser for later (although you will get a reload eventually, not to mention the atomic fusion laser).

a > also what kind of tools can you make and with what objects.

Not much: Leaf hat, Splint, Bow and arrows, Trap (never found a use for it), Fishing pole (with bait), Lizard skin pants (6) & jacket (12), Fur gloves (1), hat (3), boots (4), pants (6) and jacket (10), Molotov cocktail, and Booby-trap. You probably don't have the ingredients for the last two, nor need them until later.

BTW, you don't need (nor can get) Abelard 39's or Nina 1's id cards to complete the quest for Nietche 26. They are both in the control complex.

I've had PGS2 act very funny whenever a tab is included for which there is no corresponding tab stop. The only way to fix it was to replace every blank space in the line in question.

I am just above "rank amateur" when it comes to "switching on" let alone
anything more advanced.

However I experienced the same problem some while ago.

In my opinion your best bet is to obtain a copy of HPChrome (The STClub UK
include it on their utility disk UT_911)

Here follows an excerpt from hpchrome.txt:

HPChrome v1

(Unregistered Version)

HPChrome works on any Atari ST, with a H-P DeskJet 500C colour
printer, or with a standard DeskJet, DeskJet Plus or DeskJet 500
fitted with the Colour Kit.

HPChrome prints 16-colour picture files in DEGAS (normal or
compressed) and NEO formats. It offers a choice of size and
position on the page, with accuracy to 0.003in (0.08mm). Page
layout can be either Portrait (upright) or Landscape (sideways).
The whole image, or just a section of it, can be printed at Draft,
Normal, or Best quality. Colour-correction can be applied to
compensate for the differences between screen and paper colours.

What you need
=============

Any Atari ST computer (512K RAM upwards, colour or mono).

Hewlett-Packard DeskJet, DeskJet Plus, or DeskJet 500 printer,
with colour kit,
- or -
Hewlett-Packard DeskJet 500C, with tri-colour ink cartridge, H-P
part number HP51625A.

HPChrome runs in High resolution (on an Atari mono monitor) or
Medium or Low resolution (on a colour monitor or TV). To make use
of all the features, please use either High or Low resolution.

What you get
============

*HPCHROME.PRG - the program
*CONVERT.BIN - colour picture conversion module
*HPCHROME.TXT - the manual (this file)

The file CONVERT.BIN converts colour pics to mono so that they can
be viewed on an Atari mono monitor. All files are needed for the
program to run (this is to prevent distribution of incomplete or
modified copies, and does not apply to the registered version).

Here now follows the programmer's UK address

RUFUS DEVELOPMENTS
PO BOX 562
WIMBORNE
DORSET BH21 2YD
U.K.

Hope the above is of help

I had a look at this recently; some of the site's don't have the full
archive, so it's no surprise there's a bit of mistery about it!

It appears to be a circuit + screen driver to do what the older 'Overscan"
circuit did. It also offers a screen emulator.

The electronic circuit will only work with the STM/STFM models, as the STE
does not have the 'DE' signal available for hacking.

It is not meant for Falcons, & probably won't work on them. There are
commercial
overscan's available for the Falcon anyway.

> convert it to english from german and to explain to me just how it works.

This is a DIY graphics adapter for mega ST's. From my limited German, I
gather there is a possibility it can be adapted for STM/STFM/STE models
also.

You need a video card with the Tseng Lab's ET4000 chipset + have to build
the interface board to get the full value from this. There is some
software included.

Basically, you are grafting a PC graphics card to an Atari. You should get
loads of colours, but it might be a bit slow because of the ST's
(relativly) slow bus.

AFAIK, both these upgrades are shareware.

Dunno about that, but Octopus BBS is very heavily supported. And you don't
have to add "modules" (at additional cost, I imagine) to get fido
compatability, Internet compatability, multiple CD-ROM support, multi-line
chat...

>Can anyone tell me what I might need to do to get a device attached to the
>SCSI port?

Mike, I have one TT with a single CD-ROM on the external SCSI port, and
another with three (2 Matshitas and a Toshiba, I believe). I had an Archive
Viper tape drive as well, but the device driver for that doesn't seem to
like TOS 3.06. %^(

First thing is to ensure that you aren't trying to set the SCSI ID to either
6 or 7 (if you have something on the ACSI bus and you have an ICD host
adapter, the clock is at ACSI ID 6; the TT itself is SCSI ID 7).

Then be sure you have a driver that recognizes the device properly. If you
are using AHDI, it stops looking as soon as it finds an "empty" device ID,
so you can't have a gap in the numbering sequence.

Ideally, if you have an ICD adapter, you can use IDCHECK.PRG to determine
what the driver "sees" on both SCSI and ACSI busses - and remember, if you
have configured ICDBOOT to skip ID nubmers, it won't see those IDs (I skip
all the ACSI IDs because the ssytem boots about 15 seconds faster that way).

Further problems? Email me (don't forget to remove the NO.SPAM from my
address).

I'm moving and want to sell my Mega STe and move up to a TT030, so I'm selling the following:

1 Atari MEGA STe/4
4mb memory
120mb Maxtor SCSI internal HD
detachable keyboard with ST mouse
SC1442 14" color monitor
TOS 2.06
internal 720K floppy
assorted games and utilities

$125 plus $20 shipping.

Take it now, take it quick otherwise I'll donate it to a school and write it off.

Curt

The Nemesis board is an accelerator which speeds up the CPU, DSP,
FPU and buses of the Falcon. The increased bus speed enables the
Falcon to achieve higher resolutions. 16bit only I'm afraid.

Rich.

## 1903. OASIS and ZETNET dial scripts

Newsgroup: comp.sys.atari.st
Date: 1997-01-28 00:00:00 UTC
From: phil@yeadontt.demon.co.uk
Message-ID: <52634792_000001_OASIS_NEWS@yeadontt.demon.co.uk>
Source record: 129069
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,demon.ip.support.atari

Hi,

For anyone who has been having trouble with ZetNet and OASIS/ICE,here
is an example of what your ICE.NET file dial script section should look like

This is based on a partially constructed dial script sent to me by
Colin Fisher-McAllum. I logged on and downloaded 300 news articles with a
tansfer rate of over 1100 bytes per second with this script.

TTFN

```
'
$! DIAL START
'
' Zetnet
'
0:DIAL_TIME = 30
'
0:CONNECT_TIME = 60
'
0:DELAY_TIME = 0
'
0:PHONE = 0345573793
'
0:PACKET_CLEAR = OFF
'
0:r- *&Gx(&dDEa
0:s- ZETslip
'
0:r- Name
0:s- 'your name goes here'
'
0:r- Number
0:s- 'your three segment number goes here'
'
0:r- IGNORE
0:s- 'your other eight digit number goes here'
'
0:r- IGNORE
0:s- 'your password goes here'
'
0:r- SLIP
0:s- IGNORE
'
```

```
0:r- RESS
0:s- $GET_IP
'
$! END DIAL
'

>version 3? :)

Frank,

I wish that I knew! <g> I haven't given up on it because I've learned
not to expect much "semi-active" developers. It's been a sign of the
times for too long now. If it shows, it shows. I asked because I had
heard from STeve Kipker that he was to become the support site for v. 3.
I thought someone here might have heard something. Apparently, not. <g>

## 1905. Midi network interface

Newsgroup: comp.sys.atari.st
Date: 1997-01-28 00:00:00 UTC
From: Gambit <m_collins@hp.com>
Message-ID: <32EE98C9.45FE@hp.com>
Source record: 129071

I understand that their is software for the atari ST that allows you to network st machine through midi, and was wondering A) is this accurate, b)what software is needed, c)how long of a
midi cable can you run without needing a repeater(if one exists)? d) can all neccesary files to
acces the network be loaded on a single drive

the application is a 520st, in the kids room one connected to the tv in living room and the "server" in the computer room, 520stfm 1 meg ram, and a 160meg scsi drive
im wanting to run games off the hardrive. to the other machines...

Thanks in advanced,

Mark Collins

# 1906. MagiC or TOS for GEMulator

Newsgroup: comp.sys.atari.st
Date: 1997-01-28 00:00:00 UTC
From: Murray Piper <mpiper@ozemail.com.au>
Message-ID: <32ECE7AD.2BE9@ozemail.com.au>
Source record: 129094

Hi All,

Last week I downloaded a demo version of GEMulator96, only to find that I need either MagiC or TOS to get it happening.

Until twelve months ago, I had a 1040STe, which has broken down but I'm keen to repair when time and funds allow. It, of course, has TOS in ROM, so I've no TOS disks to feed my PC.

So, my question... is MagiC something I can get for free, or if not, where can I buy it in Australia? Can I run with it, all the things I would normally run on TOS?

Please note that this is not a request for a pirate or crack... just a genuine query from one who is new to the business of emulators.

TIA :-)

Cheers,
Murray.

From: "Mark W. Herber" <MARKH@CTS.COM>
Message-ID: <01bc081b$ee17af00$LocalHost@datel451.cts.com>
Source record: 129097

Why bother trying to hook up a PC mouse? You can probably get a new Atari mouse from Toad Computers or Best Electronics for $30 or so. With prices like that it really doesn't pay to Frankenstein a PC mouse to your Atari. Afterall, getting the parts is only one expense. The other is the time you spend getting it to work.

DRASTICALLY REDUCED!

Complete system includes the following:
HARDWARE- -TOS operating system - formats disks compatible with IBM

- SM 125 monitor
- ICD hard drive with two SyQuest 44 megabyte disk cartridges
- Computereyes - video digitizer
- Roland PR1111A printer

SOFTWARE

- Flash II (Telecommunications)
- Band in a Box - the complete series (with styles and fake books)
- Jazz Guitarist
- Pianist
- Easy Draw (desk-top publishing)
- Notator - sequencing package ($500.00 plus value)
- Art Programs

WILL ACCEPT $200.00 FOR THE WORKS!

Interesting. What's "QVC"?
By the way, it's not very popular on the Internet to quote *everything*
from a posting. You normally just quote a little part of it to let the
reader "catch up" on what the subject is all about.
Just a little helpful hint till next time ;-)
Keep on ST'ing!

## 1913. ST-Guide hypertext to ascii

Newsgroup: comp.sys.atari.st
Date: 1997-01-28 00:00:00 UTC
From: please@no.spam.mail.here
Message-ID: <27702_please@no.spam.mail.here>
Source record: 129101

*Hi Alyre*, on 27 Jan 97 you wrote: ...respect, brethren

c>
c> Is there a program that ST-Guide hypertext into ascii or RTF.

Use HCP.TTP which ought to come with the package.

Call HCP.TTP and in the command line, type:

-v -oOUTPUT.TXT STGUIDE.HYP

and you'll convert STGUIDE.HYP into a straight ASCII file called OUTPUT.TXT

If you want to retain all the commands and options in the output file,
replace -v with -r .

Message-ID: <5ck7r3$98u@alexander.INS.CWRU.Edu>
Source record: 129106

At the moment, it is not quite done, but should be shortly.
This version will be a plain vanilla version running under TOS,
NOT with a GEM window. Thus, it will NOT run with a Falcon, or with a graphics
card, but should run on most from a TT on down. (I am running with a TT 4+4
so I am looking for "lower" versions and smaller memories.) It is an
ALMOST full VT100, i.e. it obeys most of the standard and a few of
the non-standard Esc sequences. It does NOT have a blinking text mode,
nor does it have the IBM graphics set. But it does have scrolling,
and partial screen scrolling, too. And reverse, bold, underline, and italics.
It can do 30 lines on a TT, and 25 on a monochrome ST (I think?).
I don't know about a color ST. (Maybe 29 and 24)
I only need betas who will understand what's wrong if it doesn't
work right. I would also like to hear (academically) from those just
interested, to get an idea of the number of people who give a damn,
and would use it if it exists.
My E-mail receiver is down at the moment, so if you reply and
get no answer, try, try again.
Thanx.
P.S. Be patient, this is my first real project.

p> The Falcon version locks up on my Bird. I hear there was a fix for
p> this. If someone knows a fix, then e-mail or reply please. Thanks

You need the RDD3INST.PRG installation utility to get the choice between the
68000 version and the 030 (TT and Falcon) version. The program was supplied
to me with only this file and gives options for both versions and to install
as the default viewer for certain document types (compatible with NEWDESK.INF

n> places as the last ones... more details in AC #3 apparently...

What, you mean these ones?

~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
1997 UK Atari Shows Atari Computing Press Release
---------------------------------------------------------------------------
Mike Goodman, the organiser of the successful Atari Shows last September, has
confirmed two Spring Atari Shows will be taking place in April at the same
venues as last time:

- Saturday 26th April: National Motorcycle Museum, Birmingham - probably in
the Compton Suite.

- Sunday 27th April: Osterley Four Pillars Hotel, London.

- May? Possible Glasgow show although details still have to be confirmed.

Both shows will be open from 10am to 5pm, and most of the exhibitors from the
last shows plan to attend. Mike confidently expects some new exhibitors, of
which more news to follow.

Atari Computing have a stand at both shows, so make a note in your diary to
show support for the Atari scene and tell us face to face what you'd like to
see in the magazine. Even better bring along some articles or software we can
use in the magazine!

Full details will be included in Atari Computing issue 4 but if you'd like to
exhibit or require more details contact:

Tel: +44 (0)1782 335650
Fax: +44 (0)1782 316132
Goodmans, 16 Conrad Close, Meir Hay Estate, Longton, Stoke-on-Trent, ST3 1SW
(enclose SAE for reply).
---------------------------------------------------------------------------
Please spread this Press Release far and wide:

* BBS SysOps please post this to your local areas...
* If you have Atari Web pages please post this there...
* User Groups, publicise the shows at your meetings and organise car
shares...

I've already switched from Douglas Communications to getting it directly from
Richard from v6.9. My copy came over to me as soon as it was available - no
worries.

v6.9 works with Magic 5 just fine and v7 recognises Magic on the System
Status screen now AIUI.

Contact Paul Glover at stclub@cix.compulink.co.uk and ask about XChange - it certainly converts from WMF to CVG, but I don't know whether it retains the colour element.

Recently I saw that it was available for 9.95ukp + carriage.

The quick answer to your question from me is 'no', but I do rememberthat it
was marketed in the UK by Titan Designs. Perhaps you could contact David
Encil at 100345.2350@compuserve.com and see if he knows anything about it or
a contact address for you.

Then I was mistaken in believing it to be...all I knew was it was on
a CD-ROM with loads of shareware stuff, I had no idea it was NOT an
real PD release. Question is what should I do with it 'now'?

> My memory may be failing but I believe they threatened libraries about
> Neochome Master too. We certainly felt a strong compunction to
> withdraw it from our lists.

Again, I never even known that it was illegal according to Atari. It
was from a PD library that is now defunct and they don't carry any
cracked programs. I guess the PD scene was much more noticible in
the UK.

From: SUTTON GARY E <gesutton@olympic.ctc.edu>
Message-ID: <32EFB051.3BDE@olympic.ctc.edu>
Source record: 128883

Hihi! I'm new to the Atari ST world, having just recently picked up a nice 1040ST at a thrift store ($10.00 for the console and mouse, $4.50 for the monitor. :) )

Anyway, I now need to find software for her to make her useful, term programs, programming packages, games, etc. Can anyone perhaps direct me to some prime ftp sites that carry lots of ST stuff? I know it's probably in the FAQ, but I haven't seen that yet.

Any help would be greatly appreciated.

Otter

Your knowledge is certainly deeper than mine; all I know is that IDCHECK.PRG
shows the TT030 as a device.

OTOH the latest TOS clones are at least equal to , and arguably superior to,
the newest consumer machines from PC clone makes and Apple. As always (on
ANY platform), the latest hardware sells for premium prices.

>But it still fulfills all of my requirements and I can't see what motivates
>people like yourself to give me a hard time. The only reason I can suggest

>little monitor, you pick on me. Cut it out! Go home loser!

Actually, it's a form of penis envy - the guy is desperately afraid that he
might NOT have picked the "biggest one" and, since misery loves company, he
has an emotional need to convince YOU to come over and suffer in the same
way he does.

Fortunately, most Atari users are smarter than that.

Funny you should mention Bill Gates and then talk about "take the money and
run" management.

Do you know how much it costs to report a bug (yes, I said "report") to
MicroSoft? Minimum, $35 - YOU have to pay THEM to tell them they have a bug
in their OS.

"Now go away, or I shall taunt you a second time."

Actually, you ARE specifying the header lines there - that's what "Subject:"
and so on are. But I agree that the method used by NOS is good. When I was
using NOS as my itnerface, I was able to reduce online time substantially by
building a good killfile to eliminate known spammers from the newsgroups
that I downloaded. At one point, as much as 85 percent of certain groups
was spam!

My point exactly - all I did was answer the original question about who owned the intellectual copyright. I know fine well truckloads of people use TOS images for all sorts of things, that wasn't my point ;)

I got sick of waiting for one reason - lack of communication. Ad.Lib was supposedly the UK RATSoft support site, and Steve Hughey *still* didn't answer any emails from myself or Andy for almost a year. As I said elsewhere, we thought long and hard about a switch to Octopus - Koos is fast at responding to queries - but decided to give up the ghost after all.

Each SCSI device has a unique id, correctly identified by IDCHECK.PRG (an ICD program) as in my original post. I used to think the problem was my partitions, but someone tried my Version 4.51, after I'd given it up, on a new Quantum Fireball 1.2 gb drive, where, I belive, it was the only hard drive on his system and it still wouldn't recognize it. I belive his probolem was the new Fireballs are SCSI-3, but the one I have is plain ol' SCSI-2 and works great with ICD Pro. I've had it 1 1/2 years and have had absolutely no conflicts with it and any other device on my SCSI chain, and I have lots -- another hard drive, tape drive, Syquest, CD Rom drive and flatbed scanner.

Who's wasting bandwidth? The newsgroup is here to talk about Atari and their machines, which is what most people in here do! Your posting was the waste of bandwidth - if you don't use or like Atari computers, then feel free to slide off to another newsgroup.

And as for Atari not giving a shit about users - you think Bill Gates produced Win95 just because he loves you all so much? I'm sure he sits there in Seattle worrying about each an every one of you.

Couldn't agree more - I like Octopus a lot. We were seriously
considering switching to Octopus from RATsoft a while back thanks to
lack of apparent support for RAT, and only the huuuge amount of work
involved in switching systems at such a late stage in the game stopped
me ;)

If the text doesn't fit onscreen, it sounds like you need to use a smaller typeface.

>: >Of course GEM is so slow that you can actually see the flicker which
>: >occurs when the bit-planes are out of sync.

People seem to get confused about GEM being slow. GEM does not blit the window contents. The window does not blit slowly because of GEM. I use CoNnect and I don't have this problem. Maybe you have a slow computer, or a slow VDI? I find CoNnect to be quite fast even on an 8MHz ST.

>: It's not any slower than any other GEM program regarding the display.
>
>That's sort of the point.It's a GEM programme and inherently slow.

No. The GEM from an old TOS is rather slow. If you keep using a 1985 version of GEM, it will be a bit slow. But this doesn't have much to do with the scrolling.

>I keep seeing "NVDI" mentioned.What the hell is it?!?
>(can't people usde English anymore;what's with the codewords!)

NVDI stands for New VDI (VDI stands for Virtual Device Interface). NVDI replaces the VDI of the ST with a much faster version. It will make all your software appear to run incredibly fast compared to the normal VDI. It't not just a small difference, but a _huge_ difference. NVDI also supplies a SpeedoGDOS compatible outline font manager supporting Speedo, Truetype and (at extra cost) Postscript fonts.

>I have something called TurboColor that seems to speed up the GEM
>filemanager and ST BASIC.I wasn't using it at the time,but the 14-line
>limit makes the point moot.

There is no 14 line limit. If the typeface is too big to fit onscreen, use a smaller typeface. Or maybe you have big status bars or something turned on.

> What's the deal?

Since the first Atari you can connect to them a cartridge, you know.
There are *THREE* cartrigde types:

Autoboot: They are executed at the TOS init code (reset), just after
hardware has been setup but before any software bootup, like boot
sectors load, AES init, and so on.

File Systems: The unit "C" (capital letter) you said. You can have 128Kb
of files here.

Custom: They are not recognized by the system, but used in custom
applications: digitalizing devides, DAT recording, antihack locks, and
so on.

Hi Frank,

I have a copy of Issue 44 of ST World dated Oct 1989. On the
cover is a generated image of the TT's unvailing. Within the
article are a couple of nice pics from a Dusseldorf show.

While digging I also found a pic of PGA 030 Falcon in
Atari Advantage, Oct 1992 and a cover shot of Atari
Explorer with the Portfolio in the "Terminator 2" theam.

I'll have to scan them tomorrow. Look for them Friday at
ftp.ridgecrest.ca.us/pub/users/m/mgrove in the pics dir.

>current session.

Yup, thats what I found also, I think it says somewhere in the manual
that the ST version in any case will only remember the colour
settings for the current session, and that seems to be true at least
for the on screen colours, and aint it annoying when you drop out of
Pagesteam to find your windows are blacked out? Well mine are until I
go into window settings and change them manually. It's still a good
program though, I like it better than Timeworks and I've never had the
hardware to use any of the biggies.

That might not be a good idea, as the EZ-135 has been discontinued and it
will become hard to find discs. Better get a ZIP or JAZ drive.

Correct, the ladder-diagram is for the Omron series of PLCs. At our school
we also had April PLC's which we programmed in GrafCet, and I believe that
the Grafcet software was able to program more kinds of PLCs.

And I did just that! Haven't enclosed any "how to" yet though- but the
previous posting should help.
Anyway, here's where you find the programs needed:

ftp://ftp.sn.no/user/hallvart/atari/

mpack15.zip (36 Kbytes)
pacsh301.zip (115 Kbytes)

and in case you want to UUencode/decode with the shell as well;

uuende24.zip (31 Kbytes)

Hello, where have you been? Atari Corp has officially left us, abandoned the platform, etc. etc.

As for the nightmare of windoze programming, perhaps you need a few more courses :-). The nightmares don't seem to have stemmed the tide of great Win 95 software, like gemulator 96 for instance.

As for everything else you said, I pretty much agree. Being a user of both platforms, I use Win 95 for the great apps available, superior sound, speed and graphics.

But I don't love it the way I loved my falcon and my megaste. Those were great home computers.

OTOH, I also agree with Shellac that the management and marketing of Atari has been a source of frustration for users for years.

The Quantum Fireball drives require a driver that supports initiator idenfication, e. g. HuSHI, CBHD, HDDRIVER (demo version on acp5.chemie.uni-kl.de/pub/atari/.) Which the appropriate driver the drives work like any other drive type except that TOS can't boot from them. But Fireball drives are fine as non-boot drives, e. g. as external drives.

And if it is turned on the TT or Falcon must not get an ID that is
already present. Each SCSI ID has to be unique. If the computer has the
same ID a peripheral device has, strange things happen.

People like yourself always think they know everything about everything. But
in reality, it's nothing about everything, or everything about nothing (take
your pick). Why don't you stop ruining my time and spend your time in your
little IBM/Mac worshipers newsgroup?

You're right about lack of tech support, but then with Mac and IBM developers
you have to pay-by-the-minute, calling 900 numbers. By the time you are
finished
spending the big bucks, talking to some know-nothing on the phone, I will have
figured out my problem on my own, for free!

Issue #2: there may not be as much software as is available on the Mac and
IBM, but there is software available for the Atari to accomplsh most any task
that can be accomplished on the MAC/IBM. And the software that is available
for
the Atari platform is of extremely high quality. Some software on the newer
Atari clones can even accomplish a variety of tasks better and faster than a
Mac/IBM (see Current Notes, volume 16, issue 5, p.10)

The buggy TOS operating system doesn't seem to be much of a problem for me.
My Atari TT030 rarely crashes and is actually very reliable. I have a friend
with a pentium 200mhz. Windows is always misplacing and losing files, or
sometimes deleting them altogether - without his knowing. I know many others
who suffer from many of the same problems. What a mess!!
--Oh, I forgot - you'll need a special program to uninstall your programs for
you on an IBM because windows nests folders beyond where any user has the
patience to attempt to reach them -- and sometimes even this doesn't work.

Wanting to do what Macs and IBMs can do w/out achieving it? Maybe you, but I have no problems doing the same tasks - and having used all sorts of computers, many of them are much simpler on my Atari.

I currently use 800x600 true-color on my Atari to display what I think is a much better looking and easier to use environment (GEM) than windows. I regularly do full color desktop publishing, cd-rom applications, a full range of internet functions, and take care of all of my business needs.

And the best part of the whole thing is that with the internet being non-computer specific, my Atari still has room to grow. Check out Atari-Interactive. This is a great source for software and in my opinion, the "try-it-before-you-buy-it" method is one of the best ways to buy software. There are more of these unique options becoming available for the Atari platform everyday. I have found more support now that in the past serveral years.

My point here is not that Atari is better, it's obvious that the hardware is somewhat inferior to the newer machines. But it still fulfills all of my requirements and I can't see what motivates people like yourself to give me a hard time. The only reason I can suggest is that people pick on you all day long so now, hiding safely behind your little monitor, you pick on me. Cut it out! Go home loser!

Matt

KEEP IT!

I got a pentium last year; it's not as much fun as an Atari.

Luckily, I still have my ST's.

You can have both.

>
> Thoughts anyone?

Personally, I'd keep it. Have a PC as well; the ST has some really
good software for doing certain things (e.g. LZHShell, Gemview,
etc...), and is really easy to write programs on.

If you're a programmer, then you should definitely keep it, since
you can use it as a debugging machine (even if for nothing else);
attach it to your PC's serial port, then send debugging messages
there rather than have them plaster your PC's screen as you're
trying to debug your program.

I'm afraid that I'm on the same grassy verge, and this is what
I intend to do with my ST.

This brings up the following question:-

AIUI, TOS may be '(c) Atari', but the GEM portion is '(c) Digital Research'.

GEM may become PD if the present '(c) ' holder (Caldera) releases it.

There will most likely be conditions about not re-releasing modified versions,
but the possibility exists that people may be allowed to do whatever they like
with GEM, as long as it's for their own use.

What happens to Atari's '(c) ' then? Does their original copyright become
invalid ? Don't forget, the original product consisted of GEM & TOS, &
that Atari computers need GEM to work. So, if Atari (or their agents)
continue to seek payment for TOS ROMS, they may infringe the new GEM
distribution agreements.

I'm not advocating TOS piracy, just asking relevant questions.

> im wanting to run games off the hardrive. to the other machines...

Hmmm... there is software available, but most of it isn't very good;
the other thing is that they'd be better off running off floppy disks,
since MIDI in most cases is configured for 38,400 bps. (Much slower
than a floppy). The ST's MIDI interface can be configured to run
at 500,000 bps, which would be quite good, except that when running
at that rate, the CPU gets flooded with data and the machine hangs.
(Also, this reduces the cable run).

If I were you, I'd either stick with floppies, or try to get hold
of some old ethernet gear.

> that TOS was some big model of perfection...Far from it.

No... but it's nicer than Windoze any day of the week. What you don't
seem to understand is that all the extra functionality that you see in
Windows is written into each an every application. For example, OLE.
This is not some complex OS feature, but a standard communications
interface implemented in many major programs.

Also, Windows is a *PIG* to program, mostly due to the fact that,
unlike TOS (which seems to be unique in this respect), there's no
systematic function naming (e.g. in GEMDOS, all file functions start
with an "F", and all memory functions with an "M"). Under Windows,
it's pot luck whether you even find the damn function you were looking
for.

```

> together, which is one big cop-out.

You're right, the Jaguar was hastily produced, and some of the games were rather... well, SNES-like... However, it *was* a 64-bit machine. The Jaguar has one MC68000 (16/32-bit), four 64-bit RISC processors, three of which are more or less completely dedicated to graphics, but could probably be used for processing as well, and one 32-bit RISC DSP chip to handle the sound subsystem.

The 68000, contrary to popular belief (proliferated by the rather anti-Atari console press) is only actually used to process I/O, such as the joypad, and for "housekeeping tasks" - I assume this includes little things such as clocks.

> for humanity's sake, the Tramiel's going into business again... I'd
> certainly hate to see market share for another company jump from
> thriving to downright pathetic. Monkey's could have managed Atari
> better. BILL GATES could have managed Atari better...

No - this is unfair. Bill Gates could probably have managed Atari better, but Atari was failing anyway; the major problem that they had was that the press were largely against them, resulting in the entirely juvenile behaviour of a large portion of their potential market (the "Oh - it's an Atari - well, it must be cr*p then" syndrome). Monkies, however, could not have managed it better. The Tramiels have actually done quite a good job; although you probably don't realise it, the Atari 2600 games system was the most popular console ever.

# 1997. FS/T: Atari ST software [01/29/97]

Newsgroup: comp.sys.atari.st
Date: 1997-01-29 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <5cn4pf$9sq@dfw-ixnews5.ix.netcom.com>
Source record: 128937

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 01/23/97
---
I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply, along with a list of the item(s) that you are interested in. This information is for internal VGA use ONLY, and will NOT be sold! Also, you will only be added to the VGA mailing list at your request!

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

Nope. BLiTTER stands for "bit block transfer processor"; the BLiT
part comes from the B of bit, the L of block and the T of transfer.
Since BLT would be unpronouncable, an "i" was added. Something that
BLiTs must, then, be a BLiTTER :-).

Hang on a mo... there's no point using the shell with the v3.12 .TTP,
since the shell doesn't actually use an external .TTP program anyway;
if you get the source from somewhere, you'll see that as of about
v3.00, there are loads of hooks for people to write user interfaces.

## 2001. GEMulator FAQ in the making

Newsgroup: comp.sys.atari.st
Date: 1997-01-29 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.012997.111703.11@wxs4-8.worldaccess.nl>
Source record: 128941

Hi there, and sorry for the cross-posting...

GEMulator is an Atari ST emulator for PCs. The creation of a newsgroup is in the making, although limited to a planning stage at the moment. I am currently setting up a FAQ file, and I would like to request everyone who has fixed any of the problems he ran into to write them down (including their solutions) and mail me at my private email address. It looks like the first version of the FAQ will primarily be questions (so you're welcome to ask questions that you don't know the answers to, too), but I'm sure we'll get there in the end.
If you want to be put on the GEMulator FAQ mailing list, please email me with a subject of "sub GEMulator FAQ list".

If you want to have a look at some of the problems *I* am having with the GEMulator...

1) "ST Zip" won't work. It cannot write (deflate) anything; it gets write errors on the hard disk. Can this be fixed?

2) Can "FastCopy Pro" be made to work? I tried to copy a disk (this had readable directories and folders) and, although FCopy appeared to work fine (albeit slow when writing) the target disk had 0 bytes used, and no folders either.

3) "Revenge Doc Displayer" refuses to be installed properly. How come?

4) "Freedom" seems not to work; the file selector seems unable to let you save a document that already exists, although it does update the time stamp.

5) "Xboot" sees folders double and can't find its own "c:\XBOOT\" path. Suggestions?

6) "Ledpanel" doesn't work.

7) I tried installing Geneva and Neodesk 4 on the GEMulator. Neo4 seems to work just fine. Installing Geneva goes fairly OK, but it can't use Neo4 at the same time. I think the problem is the following: To autoboot Neo4 from Geneva (as a shell), Geneva has to read the specs from GEM.CNF. And the GEM.CNF is always 0 bytes after installing it on GEMulator...

8) The GfA Basic compiler "MENU.PRG" screws up compiling. I fixed this problem...a solution will be in the FAQ.

9) A failsafe way to check the write-protect status (on any Atari, any TOS version) won't work on GEMulator. How can one check this now?

That's it...I hope there'll be lots of response.

You both got it wrong.

The Jag has a MC68000 and two identical 32-bit RISC processors (one of
which was intended to handle sound processing). It also has a couple
coprocessors to accelerate things like blitting, sprites, etc. The 64-bit
element in the whole affair was the memory bus connecting the various
processing elements and the 2MB DRAM memory together.

Does it really matter that none of the processors in the machine cannot
handle 64-bit instructions? No. The only reason the N64 to has a 64-bit
CPU is that SGI designed the thing, and they're partial to the 64-bit MIPS
architecture. Not surprising, given that SGI owns MIPS.

There were clear benefits for game consoles to move from 8 to 16 to 32 bit
CPUs. These jumps allowed larger address spaces and quicker computation
(because 16 and 32 bit calculations are very useful). But 32-bit address
spaces are overkill for games in the immediate future, and 32-bit numbers
have a large enough range that you don't really need more except in very
rare cases.

The last version I saw didn't, which was a shame as I had a truckload of
colour WMF files which would have been nice to play with in Oline 3 :(

# 2005. New ST Game

Newsgroup: comp.sys.atari.st
Date: 1997-01-29 00:00:00 UTC
From: Andy Robertson <andrew.robertson@scomagg.co.uk>
Message-ID: <32EF50C7.5A6F@scomagg.co.uk>
Source record: 128945

Hi,

I'm starting work on a new ST/Falcon game called Universal Command. It's a space strategy game along the lines of Supermecy with elements of Civilization and I need ideas for it.

If you have ever played Supremecy then I'll ask you, "What would make it better". I have already a fair number of ideas for the game but any help would be welcomed. :)

I have a rough spec for the game if anyone is interested in having a look and commenting on it.

Also, I'm thinking about making it STE/Falcon only, but I may keep it compatible with all ST's.

I really need as many ideas and suggestions as possible. Of course, everyone will be credited in the game etc.. :))

Best Regards.

Andy Robertson

I've been using QED since it was only available in German and I have to say that it is the best text editor I have used on the Atari. It's definitely worth trying out. Guido your translation is perfect - just get Christian to fix that word-wrap bug (you know the one where you start a new file and save it as a file type that has wrapping turned on and QED crashes).

Michael

Back to the Hong Kong business card machines- I live in Hong Kong and have seen them still in use in the MTR train stations. They have an enquiry phone number on them so I might give them a call.

Also about 18 months ago I found a shop in Wan Chai selling new boxed STFM's for HK$100 each, which is about the same as eight UK pounds! I bought three and was told they had about 50 in stock. I should have got more but I had nowhere to put them! I don't know who bought the rest but there all got now. I also was given a broken TT which I have now managed to fix and use with STIK and CAB on the Net.

The only thing I can't find here is software, so if anyone has anything they want to sell (like Calumus,CAD software, etc.) then please Email me.

Mark Banfield

## 2013. UDO Release 6 available

Newsgroup: comp.sys.atari.st
Date: 1997-01-29 00:00:00 UTC
From: Dirk Hagedorn <e80097@pbhrzs0.uni-paderborn.de>
Message-ID: <32EF64A7.2666@pbhrzs0.uni-paderborn.de>
Source record: 128953

Hi folks,

UDO Release 6 is available now. You can download it from here:
- http://members.aol.com/UDOENG/index.htm (official site)
- http://pbhrzs0.uni-paderborn.de/~e80097 (mirror site)
- http://www.oche.de/~msy/udo/mirror.htm (mirror site)

Information about UDO can be found on my homepage, that is
http://members.aol.com/DirkHage/www/eng/udo.htm

UDO is a shareware that converts its own text format into
- ASCII
- ST-Guide
- RTF
- HTML
- Pure C Help
- Windows Help
- Linuxdoc-SGML
- Texinfo
- Manpages
- NROFF
- Turbo Vision Help
- and some more

English support is done by Denesh Bhabuta (the CyberSTrider).

If you have questions converning UDO please write to DirkHage@aol.com

Ciao, Dirk

# 2014. Re: Differences: STacy & Portfolio

Newsgroup: comp.sys.atari.st
Date: 1997-01-29 00:00:00 UTC
From: Rob.Schafrick@taf.to.org
Message-ID: <4ca_9701290900@to.org>
Source record: 128954

Well, the STacy had problems with the battery pack, which was
supposedly corrected in the newer versions. I wouldn't recommend
using the STacy for fast-paced stuff, since the screen redraws of
the LCD are not the best. They're ok, but its easy to lose sight
of the mouse...hence the program Bubble, which lets you find it again.
Of course, this problem is gone when using a reg Atari monitor.

Be sure to get a STacy with 4 megs and a large hd.

From the sounds of it, it looks like you are after portability...
the STacy is comparatively bulky compared to its PC laptop cousins.

As for the Portfolio, I don't know if the got their software together
for tranfer to and from an ST/TT/Falcon...

If you're just after portable WP, a modern alternative capable of
transferring to and from an ST would probably be in order.

Just my opinion though...

LOGNAME should be the full path to a log file, e.g.:

LOGNAME=E:\LOGS\PCKSHELL.LOG

HOSTNAME is the name of your computer.

HOSTNAME=WEASEL

Nothing special to it. I'd recommend limiting your hostname to 8 characters
for the sake of the 8.3 file system.

Troy Cheek may have that info - see if you can find a Fidonet BBS in your
area and look for him in the Atari_ST echo - he's the moderator.

>network st machine through midi,

Several different ones, actually.

>and was wondering A) is this accurate, b)what software is needed,

a) yes, and b) depends on your needs. I use MIDIcom (aka MIDInet), but
LittleNEt does roughly the same thing. A&D software also has a
commercial MIDI-networkable package which can be upgraded to a cartidge LAN
adapter.

>c)how long of a midi cable can you run without needing a repeater(if one
>exists)?

I would expect at least 50 feet, and I seem to recall reports of more than
150 feet.

>d) can all neccesary files to acces the network be loaded on a single drive

MIDIcom will run from a single-sided floppy with enough room left for some
other stuff.

>im wanting to run games off the hardrive. to the other machines...

That may be unrewarding; the MIDI ports are limited to about 31k bps, just a
little less than twice the serial port speed. MIDInetworking is good for
data sharing, but pretty poor for real-time interaction with large files.
On the other hand, it's free (except for the cost of the cables).

In additional to an actual temp folder, you need an environment variable pointing to it. The easiest way to do this is bye inserting the following lines in your MINt.CNF

```
ln D:\PATHTOTMPFOLDER /tmp
setenv TMP /tmp
```

where D:\PATHTOFOLDER is the complete path to your temp folder. The first line createas a symbolic link in the U: drive, and the second line sets an appropriate environment variable.

: Now, I believe that I am getting a PPP connection. Here's my recent
: MESSAGES:

To check that you are, take a look in the /proc directory. If there's a "file" in there called pppd, there probably is a connection.

```
: Failed to create pid file /var/run/ppp0.pid: file not found
: <29>Jan 23 14:09:50 pppd[7]: Connect: ppp0 <--> /dev/modem1
: Jan 23 14:09:52 homer pppd[7]: local IP address 100.0.0.1
: <29>Jan 23 14:09:52 pppd[7]: remote IP address 204.96.82.86
: Jan 23 14:10:26 homer pppd[7]:CCP: timeout sending Config-Requests
: Jan 23 14:16:38 homer syslogd:
: exiting on signal 15
```

: I am intrigued by the "CCP: timeout sending Config-Requests." This, on
: the surface does not seem to be a "good" message. Is this a clue to where
: my problem lays?

Your local IP address sounds suspect. It sounds like your pppd is set up for static IP rather than dynamic. If you're using dynamic IP, you should get an IP address looking much like your provider's. Check your pppd options; nice things will not happen if you don't have a valid IP address. The request message may be a result of having a wrong address.

Oh, is it? So you're telling me that the dialog which shows up from the 'Desk' menu doesn't claim that TOS is (c) Atari Corp.?

> TOS is what makes the ST GO.If you restrict distribution you force
> programmers to programme for TOS 1.0! Rather than that,they'll probably
> just make it so it won't work with old STs or they'll violate the OS
> like everybody does on the PC.

So by your argument, MSDOS isn't copyrighted to Microsoft, since it's what makes the PC 'go'? What the hell makes you think programmers would program for TOS 1.0? TOS upgrades were always freely available from Atari dealers, in chip form. That's not 'restricting distribution', is it?

> Look at the Atari,DOS usually came on a game disk (depends on the
> game),and always with a new disk drive. And while the OS was in ROM,it
> was a cartridge that could easily be swapped out.

What the hell has that to do with the issue of copyright? Absolutely nothing.

> I assume that TOS is re-locatable,so I assume you can load other TOSes
> even on a machine with TOS built-in.(but it's kinda huge) Isn't there a

Ah... the keyword - assume. Do you have any experience of the ST series, or are you basing your 'this of course is utter rubbish' comments on experience of the 8-bit machines?

None of this has anything to do with my reply - which was that TOS is (c) Atari. It is. Period. People copy it, create images, run emulators and lots of things - but it's still copyrighted.

ATB, Frank.

Just pull down the Desk menu and look at the credits. If it says 3.10 it is the newest.

Also, if the copyright date is 1993, and the newest files are from around November of that year, then you have the newest.

There was also a small addendum for 3.1 included with the manual for 3.0.

Probe House DMA Player can be found at my web page

http://www.geocities.com/SiliconValley/6880/phsw.html

This DMA sample player auto detects the following:

1/ AU - Next/Sun Audio files ( 8bits u-law, 8/16bits linear).
2/ AVR - Audio Visual Research ( 8/16bits linear).
3/ WAV - Microsoft Wave ( 8bits u-law, 8bits a-law, 8/16bits linear).
4/ SND - Sound file (8/16bits linear).
5/ AIF - SGI/Apple IIF uncompressed (8/16bits).

Any unknown will be played as RAW format - 8 bits, unsigned at 12KHz.

Other features:
1/ Multitask aware.
2/ Drag sample onto icon to play.
3/ Don't display any output to screen.

Have fun!

# 2039. Re: MintNet & CAB help

Newsgroup: comp.sys.atari.st
Date: 1997-01-29 00:00:00 UTC
From: caesar@nwlink.com
Message-ID: <5cmfhm$48a$1@texas.nwlink.com>
Source record: 129013

Hi there. Me again.

First of all, thanks for all your help so far.

So, here's the deal: I've got 10 days of free PPP to try and get Mintnet to work with CAB. I think I'm pretty close and, probably, missing something pretty obvious.

I, following the advice given previously, created a new folder, "TMP," on my MintNet partitition (quasi-partition). I still get the "Path not Found; error #-34," though, when trying to access a URL with CAB.

Now, I believe that I am getting a PPP connection. Here's my recent MESSAGES:

```
Failed to create pid file /var/run/ppp0.pid: file not found
<29>Jan 23 14:09:50 pppd[7]: Connect: ppp0 <--> /dev/modem1
Jan 23 14:09:52 homer pppd[7]: local IP address 100.0.0.1
<29>Jan 23 14:09:52 pppd[7]: remote IP address 204.96.82.86
Jan 23 14:10:26 homer pppd[7]:CCP: timeout sending Config-Requests
Jan 23 14:16:38 homer syslogd:
exiting on signal 15
```

I am intrigued by the "CCP: timeout sending Config-Requests." This, on the surface does not seem to be a "good" message. Is this a clue to where my problem lays?

Only 9.85 days left! Help!

Joel.

# 2040. MIME/BASE 64 encoding decoding problem solved!

Newsgroup: comp.sys.atari.st
Date: 1997-01-29 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <32eecc50108b360@sn.no>
Source record: 129014

Thanks to Jos Den Bekker I've been able to get a working MIME/BASE 64
encoder/decoder working on my STe!

This is how I did it:

-got hold of "Packshell 3.01" (user friendly shell for .TTP programs)
-got hold of "Mpack 15" (MIME/unMIME .ttp programs)

Starting up "Packshell" I selected the drive/partition where the
"munpack.ttp" (MIME-unpacker) and "mpack.ttp" (MIME-packer) programs were
located, then simply dragged them over to Packshell's desktop where they
even got their own "first aid kit" icons! ;-)

For some reason the filenames of the icons in "Packshell" are truncated to
5 characters (perhaps it's a limitation before the program is registered?),
anyway you now have two additional icons on the Packshell desktop, one
named "mpack", the other one named "munpa".

Double click the "mpack" icon and you'll be presented with a command line.
Enter the following: -o c:\tmp\mime $f
(or use the path where your "temporary" directory is if it's different from
C:\tmp. The MIME-encoded files will be given the name "mime")
There's also a button which is marked "ARGV", but I have no idea what it's
for- it seemed to work equally well with both settings....
Press return.

Now double click the "munpa" icon and enter the following in the
command-line area: $f

That's it!!
Now save the setup ofcourse, and you're ready to go.

To use it just select the folder/file you want to encode/decode and drag it
over to the "munpa" icon for decoding a MIME message, or to the "mpack"
icon if you want to make a MIME encoded message.

Now, Packshell also works with a whole lot of .TTP programs, and I
installed UUencode/decode in it as well.
Using Jos' "uud.ttp" (UUdecode) and "uud.ttp" (UUencode) files I repeated
the above procedure, but entered the following command line
parameters: $f
I used the same parameter for both files, and it worked, but for some
reason it didn't rename a file if the same one was decoded twice (like MIME
above did).... perhaps I should use some other parameters as well?

Regarding the MIME programs Jos said the following in a previous posting:

>For both programs the following environment variables must be set:
>TMP, for your temporary directory, LOGNAME, and HOSTNAME.

Perhaps this applies mainly for multi-part files?
I only have the "tmp" variable set on my machine (using "environ.prg" in my auto folder), but I've never heard of the other two.
Can you or anyone else explain how they should be set?
My "environ.dat" file looks like this:

```
TMP=C:\tmp
TMPDIR=C:\tmp
CLIPBRD=C:\clipbrd
SHELL=D:\utility\unix\gemini\gemini.app
```

Well, that's it- I hope someone can benefit from this "how to" posting which is based on what Jos den Bekker told me (thanks Jos!).
Any comments are welcome ofcourse.

Hmmm.... perhaps I'll upload all these programs to my site and include a small "how to" text file with it as well..

PS. Does anyone know if there are any English docs around for "Packshell"? The .HYP (ST-guide) file that came with it was in German although the program itself was in English.

Hallvard

I suppose you could go play in comp.sys.ibm or comp.sys.mac for a while
couldn't you?

And before you tell me to go get a *real* machine I happen to own a
P-120mHz and I do
use Win95. I was also a programmer on both the AtariST and the Atari-8bit
and let me
tell you what a *NIGHTMARE* it is programming for Win95. GEM was baby-talk
compared to
the stupid API calls Win95 has and all the patches you need and the stupid
format of the
calls (half the system calls are derived from Pascal, the original language
Windows was
programmed in).

I thought the post was quite interesting since I did not know that Atari
Corp had
'officially' left us. But the important thing is that there are still
people who
enjoy using the machines and if it's good enough for them then why should
they go out
and spend 1000's of $$$ on an IBM or Mac?

Like I said before: if you've gotten tired of Atari's then please take
yourself off to
another one of the 10,000+ newsgroups!

Frank is 100% right. TOS is copyright by Atari Corp (or JTS now).

However, I happen to have images of TOS v1.0, v1.4, v1.6, v1.62 and v2.06 (and am looking for v3.06) which I use in emulators. I got most of these images off various users on the Internet but I could just have easily gotten them off the Translator disk I have buried somewhere in a box of ST stuff somewhere.

My point is that since Atari Corp no longer really exists anymore and I don't see JTS really saying much about Atari at all (heck, they are probably wondering what to do with 'Atari' as you read this), I don't see a problem using copies of TOS to make the emulators work. Yes, it probably is illegal, but then so is copying that video from the rental store, or that favorite tape or CD!

Anyways, that's my $0.02... replys welcome.

This message from Mr.Maddog@mail.ptd.net to All came in on a wing and a prayer...

>> From Alyre Chiasson <[1]chiassa@umoncton.ca>
>>
>> Is there a program that ST-Guide hypertext into ascii or RTF.
MM>
MM> You can just load the HYP files in any text editor and take out the
MM> weird codes. So far, no conversion program.
The full archive of ST-Guide has a TTP that will take the HYP file and convert it back to ASCI, the method you describe won't work as the HYP is compressed.

Speak to 'ya later!

Message-ID: <01bc0507$384b4c20$3a9e099a@default>
Source record: 128772

Hello,

Does anybody know of a program that let's me write Mac 800k disks on an Atari ST, and I don't mean the Spectre Emulator, I alson know of the GOTO_MAC.TOS prog that formats 800k disks on an Atari, but it doesn't read them.

Please mail to my adres:

Thankx,

Paul ;-)

d> And "translator" OSes are available from PD/shareware sources,as well.

You are a little bit out of date, unfortunately. You are talking about the
Atari Classic 8-bit machines, with their disk-loadable DOS 3, DOS 2.5 and the
replacements of SpartaDOS etc. This is not for the Atari ST, which is a

16-bit, Motorola 68000-based machine, with TOS in ROM for 991f its life

If we were talking about the 8-bit, the majority of what you said might be true, but these same restrictions didn't apply. As it stands, your comments aren't relevant to the 16-bit and 32-bit machines we're discussing.

You don't need any extra hardware. Go to the aixit home page (there's a link at my page, see below) and get the TOS2WIN demo - after you've tried it, you'll want to buy it. In the registered version, each application can have up to 14 megs of RAM, 256 colors in whatever resolution your video card supports, and full support of the AUTO folder and desk accessories (configurable for EACH application). And you can multitask TOS Apps (registered version) as well. It actually makes a Pentium useful. <G>

We have the following Pentium Computer for sale.

Manufactuer: Canon

Specification:

Pentium 133 CPU
1.6 Gig Hard Drive
1.44 Floppy Drive
8X CD-Rom
28.8 Bps Modem
16MB of EDO Ram 72 Pin
Mid Tower with open 3 open 5.25 bays and 1 3.5 open bay
Case also has RF Connector
Intel Chipset Motherboard
16 bit Sound Card
1 MB PCI VGA Exp. to 2 MB
256k Pipeline Cache
PS/2 Keyboad and PS/2 Mouse
Windows 95

All computers are brand new from Manufactuer.

Price: $ 1,099 USD

Optional:

2 X 4 CD Recorder (Internal)
w/SCSI Card, EZ CD Pro Software
Price: 399.95 USD

Expand to 2MB of VGA Graphics
Price: $ 49 USD

Monitors Avilable Upon Request

If you have any questions feel free to call,

try going to http://www.emulators.com and find Gemulator 3.60 Classic.
It's free. On my DX4100 it runs about five times the speed of an ST.
You'll need a diskbased tos on rom, or to buy the card offered by
gemulator. They also have a great win 95 version for $69 U.S.

## 2062. Ultima VI Problem...

Newsgroup: comp.sys.atari.st
Date: 1997-01-30 00:00:00 UTC
From: alkio@hkkk.fi
Message-ID: <854661466.14192@dejanews.com>
Source record: 128786

I went to a strange PC shop today. Since they seemed to have
old C64 games lying around I thought I'd ask if they have any
Atari ST software. Well, they found two: Ultima VI and Deadline.
Since I had never played Ultima VI and I could get both games for
$10 or so I bought them. When I got home I eagerly started unwrapping
the Ultima. But my disappointment was great since in the box were
3 disks and 2 of them were the same disk! So there was Install Disk
(Disk1) and TWO COPIES of Data Disk1 (Disk2). It appears that the
Data Disk2 (Disk3) is missing! And I was so eager to get a new game
for my Falcon! (It should work on Falcon according to list I found
on the net....)
So, what I am asking for is a little favour. If somebody has Ultima VI
(The False Prophet) for Atari ST I would be very thankful if you
could send me a copy of the DataDisk2 (Disk3). I don't need the other
two disk since I already have them (and it would be piracy to get the
whole game). The easiest way to do this would be by email attachment
- you could zip the disk and send it to me to my address alkio@hkkk.fi
I hope somebody answers since somebody probably does have the game...
Greetings, Jouni Alkio, Helsinki, Finland

I would recommend keeping your TT, at least for about a year. TT's don't sell for much and it sounds like you've invested a lot in yours.

I like Windows95, it is a great OS with many cool features and it works well. But if you keep your TT, you can go back to the applications that you've used for years (Don't even think about GEMULATOR as a replacement for a real TT, or even ST for that matter - when I bought a PC I sold my Falcon and bought GEMULATOR - life hasn't been the same since).

No such server, Sid. Removing "ourworld" lets me get to compuserv, but I
get a 404 error on any combination with either "homepages" or "TITANWEB" in.

You don't need a program to download fonts to a printer, you need SpeedoGDOS
or NVDI-GDOS, plus the appropriate TrueType, Adobe, or Speedo Cryllic font/s.
try some of these links:
http://www.compdirect.com/products/publishing/publish.html
http://wsspinfo.cern.ch/faq/fonts-faq/part14
http://homepages.allcon.com/~cookie/gdos/sections/2.html

Try "Macsee2" of DMC ... it reads and write both DD & HD mac
formatted. But it doesn't format them !

Menu Options, Entry Local: Double-Click on the popup "for files".

BTW, why have I submitted a translation? ;-)
Just kidding. I know that you easily overread things in hypertexts. You
will find the above explanation however, if you follow the links

Menu functions->Options->Local

in the hypertext. Or easier: Press the CTRL-key while selecting a menu
item. Instead of performing the function qed will call the associated node
in the online help.

Ciao

I'll plead ignorance on that one, but the English term is "login name"

>>HOSTNAME is the name of your computer.
>>
>>HOSTNAME=WEASEL
>
>Wrong again! It should be the name of your host, your internet
>provider.

This one, however, is contrary to all usage I've ever seen on any network -
the hostname in MIDInet, Novell NetWare, MicroSlop Network, and general
Internet usage is always the name of the /local/ host; the name of the
remote system is either the "remote hostname," "server name," or sometimes
the domain name (if it's a single-server domain).

## 2074. Two Questions

Newsgroup: comp.sys.atari.st
Date: 1997-01-30 00:00:00 UTC
From: see@address.below
Message-ID: <162_see@address.below>
Source record: 128798

1) SCSI Bus Arbitration:

Using an ST, Falcon and HDDriver 6.x is it possible to link the Hard drives between these machines? Or do I need 2 Falcons?

i.e Is this possible?

```
----- ----- ----- --------
| ST |_____| HD0 |____| HD1 |_____| Falcon |
| | | | | | | ID2 |
----- ----- ----- --------
```

I can't get this clear in my mind.

2) MS Word

Is there anything which can read MS Word docs on the ST/Falcon ... I have to swap files with a PC owning friend who cannot grasp saving the files in RTF format so I can use them with Papyrus and it's a real pain.

Hope someone can help with one or both questions!

Here's another SCSI question: I have a syquest 135 connected to a Mega2 via an ICD2. I also have an *old* supra 10MB floppy drive that has both a SCSI and DMA port. I can find the syquest drive or the supra, but I can't chain them together and get the ST to recognize both drives (on some combinations, it can't find either one!) I'd really like to dump some files off the supra onto the syquest, and using floppies is kind of a bitch. So, how do I fix this problem?

If it's a Link II it will have a little red LED that dots the L"i"nk.
I think that's the only difference externally, the LED tells you if the
link is getting power or not (from the drive it is attached to).

Source record: 128804

> Where exactly do I set the environment variables? Within a particular
> file? Thanks for the tip!
The safest is in /usr/multitos/mint.cnf.

You must remember one thing:

Each process inherits its environment from its parent process. (If you run the ps command you see a list of all running processes with their own pid PID and the PID of the process that started that particular process, named PPID). Like this you can see what processes have started CAB: It should be MiNT itself (always PID 0), MiNT must have started some GEM driver and this GEM driver starts CAB and CAB starts cab.ovl. You must ensure that your envariables get set somewhere on the way.

Ciao

: It's the best music dtp style program for the atari I've
: seen, but the gdos printer routines doesn't work that well...
: I have had to get a IMG.SYS and make an outprint to disk
: in a .img format and then print it. I've tried with lots
: of different laser printer drivers (I got an HP laserjerII)
: but it bombs out just when it supposed to sent the stuff
: to the printer (it loads the printer fonts allright).

You could try asking the developers (Take Control) who are in Birmingham, UK.
I don't know the phone number/address off-hand but could find out. They
were also fairly closely linked with Titan Design (producers of Apex and such)
again of Birmingham so you could try contacting them instead. Also I believe
they are up to version about 4 and have possibly changed the name.
Dave

You might check with an Amiga dealer (has to be some around:).
CD-Solutions makes a nice flat 15" multisync that will work fine
with the Falcon at 15.5Khz. Look for a Video Toaster User
mag for a dealer near you or if there are any Amiga mags
left brouse thru those. I have a Commodore 1084S that supports
the Falcon (with a special cable) and SVHS as well. It's
rather old technology, but Commodore did make some higher
spec models that will work as well.

Mike

# 2086. Any interest in old mags?

Newsgroup: comp.sys.atari.st

If I remember correctly, there should be a couple dozen old STart mags (and maybe a few Antics) in my closet at my mom's house. Anyone interested in these mags, circa 1987?

I saw a posting for some mags and remembered my old ones. Since they aren't doing me any good, I thought I see if someone else was interested. E-mail me if you are.

And this is software coming from the #1 software company....

WinNT 4.0, which I am using, needs a patch. Of course the memo from MS says you may experience some data corruption without the patch. This was within weeks of the release.

And now, MS came out with another patch. Without this new patch, you may again experience data corruption.

Wonder if this time they really fix it!

So... WinNT, the flagship of MS, is not that great after all. With this type of patches, what they mean is "don't come after me if you lost all your data, we already provided you with patches, didn't you use them?".

And did you know that if you compare Win95 today with that of 1995 version, there are marked differences. They don't tell you, it's still Win95, no version#, just a tiny built#. Most ppl being non-develper will not know what a built# is.

Don't flame me... just my 2.5 cents worth.
Check out the stories for yourself at their web site.

Regards
William

I uploaded STarCall 2.1A(ENG) to the following ftp-sites:
1) ftp.teleport.com/users/atari
2) sunsite.cnam.fr/pub/Atari

It will be available to download from in some days I believe.

I meant 'official' in the business sense. Not in the customer support
areas, etc.
I did not know that Atari, Corp. had officially ceased to be.

> Hello, where have you been? Atari Corp has officially left us, abandoned
> the platform, etc. etc.

My last Atari STe died about a year ago.

Tell me about it! =) I never said I was a genius Win95 programmer, far from
it
actually, but I am learning. GEM only took me appx a month or two to master
easily.
Win95 it taking considerably longer than that to even feel confortable
with. (sigh).

> As for everything else you said, I pretty much agree. Being a user of

For the ST I assume? They came out with a PC version you know. With the
original
Bubble Bobble/Rainbow Islands and an *ENHANCED* version of Rainbow Islands.

Anyways... I don't have the original ST version but thought you may want to
know
about the PC one.

If in the USA, I'd say the ICD Link II, but I think perhaps you may
still have to modify the drive cable to use the ZIP drive on a Mega
ST, the ZIP does not supply power to pin 28 which is what provides
power to the Link host adaptor.

Anyone else out there confirm this or correct me please if I'm passing
out bum info..

Yes, a full working environment easy to install and in ENglish.
Based on the excellent kit KGMD from Knarf..
Everything explained, step by step, Just follow he doc like you would
with a recipe.
Please have a look at my page for now. Ftp later..
And Mint is really great, nothing to compare with the old simple setup
that atari corp released...
It is fast, very reliable, multiusers, full internet support, etc etc
.
Up to 9 virtual consoles and 1 console.
Bye. :)

> STacy?

I would try to get hold of a ST-Book if possible. Much nicer, smaller
and actually looks very nice. I'm not sure how easy they are to get hold
of though. I would even like to have one. The STacy is _much_ bigger than
the ST-Book.

I think both the STacy and ST-Book comes with hard drive and they should
have the usual ports to connect whatever you want.

## 2105. Keyboard problems

Newsgroup: comp.sys.atari.st
Date: 1997-01-30 00:00:00 UTC
From: Karl.Brokstad@gades.uib.no
Message-ID: <5cpu8j$u8$1@toralf.uib.no>
Source record: 128840

I need good advice !

The (9) and the (*) buttons in the numeric key pad do not longer work on my Atari TT keyboard.

I would like to open the keyboard to check and clean the contacts.

Can anyone give me some good advice how to do it. I had simmilar problems on my previous Atari ST, and taking the keyboard apart on the ST seem to be simpler than the TT keyboard.

Thanks

Karl

From: Richard Krejstrup <di94rkr@student.hk-r.se>
Message-ID: <32F07FD9.6D17@student.hk-r.se>
Source record: 128841

Actually I _can_ print it to a IMG file and print it from
any .img printing program. But it's a not so nice solution
and it's my girlfriend using music dtp... (need I say more:)
I can't use laserjet.sys that came with the music dtp with
NVDI (3.10), it'll bomb out really bad. So I use the sys-
driver from speedogdos.
There's a postscript sys driver too but I can't make it
work either :(

P.S. I'll try to contact David Encil. Thanks Harry!

> console ever.

I'm not impressed by the Tramiels' handling of Atari. And the
success of the 2600 was there before the Tramiels' came along.
The persistence of the 2600 is more due to its uniqueness, it
being one of the very first game consoles, and not to the
Tramiels per se.
Also the success of the Atari 2600 in the begininng, when it
was just plain ol' Atari VCS was the very reason why the Atari
Home Computers suffered from the image of a "games machine".
It didn't help when Atari didn't know how to market their
new technology, either, or treat their employees well. They
lost good programmers that way.

This has nothing to do with the problem, but does 'Future Wars -
Time Travellers' or the other game from the same team, work on
the Falcon, or even better on the Afterburner040? I remember that I
liked Future Wars very much.

Is it also HD installable?

http://ourworld.compuserve.com/homepages/TITANWEB/

>and i hear the nemesis baord is 640*480 true colour
>is that 16 bit or 24 bit....
>basicaly is it just a resolution doubler or do i get 16 million colours

Neither. It is an accellerator. The reason the Falcon cannot do high-rez
16-bit mode is because the bus is too slow, therefore an accellerator
not only makes your machine faster, but also allows it to reach higher
screen resolutions (with appropriate software).

If you want high-rez 24-bit mode, you want a (super?)NOVA, I believe...

I was finally able to get the system to recognize the scanner attached to
the external SCSI port thanks to Rich Tietjens. I was using SCSI ID 6 for
the scanner which the ICD Link II uses which I have attached to the ACSI
port. Once I changed the SCSI ID on the scanner to 5 the system recognized
it fine.

# 2114. Re: Notator on a TT or Falcon?

Newsgroup: comp.sys.atari.st
Date: 1997-01-30 00:00:00 UTC
From: Oliver Skelton <skelton@gatwick.geoquest.slb.com>
Message-ID: <32EFEC46.6303@gatwick.geoquest.slb.com>
Source record: 128849

Hi,

You definitely can't run Notator on a Falcon (I have Notator & Logic).
I think it may run on a standard TT - but I don't have one and it may
well not.
When I upgraded my MSTE with a PAK accelerator I was told it wouldn't
run unless I had a GAL switch to switch back to 8MHz (and I think the
old 68000 chip). My MSTE/PAK couldn't be got to work with the GAL switch
so I guess it won't work on my MSTE - I haven't tried it on that.

I initially had Notator Alpha - a very good upgrade offer came through
to upgrade to Logic at the same price as upgrading from Notator SL to
Logic... _and_ a full latest version of Notator SL came with the
upgrade.

However, the real music maker in my family is my younger brother in
Spain and he has stuck with Notator (on a STFM). I just play around, but
my impression is that Logic is now very powerful (though it is annoying
that the Mac/PC versions move ahead whilst the Atari one doesn't).

If you do go for Logic sometime there are some web sites you might be
able to browse which provide some helpful material on using the complex
environment page etc:
http://www.mcc.ac.uk/~emagic/emagic_page.html
http://www.swiftkick.com/
http://www1.medbank.or.jp/~rikos/KOLD/
(I ordered the $35 environment guide from the swiftkick site and it
arrived very rapidly and looks very impressive. The accompanying disk
with .lso environments was a mac format disk which I had to read at work
- perhaps I could have specified a PC format disk instead. The .lso
files were only partially compatible with the latest version of logic
for the Atari)

In my opinion, Notator SL is the only practical one of the Emagic
sequencers on the standard ST series (due to speed and screen acreage),
but if you have a TT or Falcon and expanded screen resolution then Logic
probably is the best. It also means you are better prepared for the day
you have to switch to a Mac or PC.

Hope this helps.

Regards,
Oliver oskelton@cix.compulink.co.uk

With the SuperNova you can also get up to 32-bit colour. Not to bad. :-)
I think you can get 24-bit with a regular Nova as well, but I'm not
sure.

Can't complain about that!

>Anyway, I now need to find software for her to make her useful, term
>programs, programming packages, games, etc. Can anyone perhaps direct
>me to some prime ftp sites that carry lots of ST stuff? I know it's
>probably in the FAQ, but I haven't seen that yet.

First of all, the FAQs, which can be downloaded from:

ftp://ftp.sn.no/user/hallvart/atari/info/

47K faq1_st.txt Atari ST Frequently Asked Questions part 1
30K faq2_st.txt Atari ST Frequently Asked Questions part 2
28K faq3_st.txt Atari ST Frequently Asked Questions part 3
23K n_faq1.txt New Atari ST Frequently Asked Questions part 1
29K n_faq2.txt New Atari ST Frequently Asked Questions part 2
41K n_faq3.txt New Atari ST Frequently Asked Questions part 3

As you see there are two different FAQs (each of them in 3 parts).
They both contain more or less the same information though the "new"
(n_faq*.txt) FAQ contains more up to date information on Atari ST emulators
for Mac, PC etc. The old one is just that- old, though it contains
information on the more advanced UNIX like stuff on the ST as well.

I suggest you grab the "new" FAQ.

As for software... I've made up a small, but useful collection of all sorts
of utilities which really brings out the power of your machine and makes it
a lot more effective and fun to use. I'm sure you'll find things there
which you'll need.
To get them you can either go to the same site as above, but starting in the
main directory instead: ftp://ftp.sn.no/user/hallvart/atari/

Or.... you can download the same software from my web page which also
contains file-descriptions. I've made links to most of the software in my
site from that page, though not all. But it's nice to start with.

http://home.sn.no/~hallvart/pages/atari_sn.html

For other programs you should try out the various FTP sites around the
globe. I've made a list over FTP sites for the Atari ST series which I post
to this group (and the "tech" group) once a month, so it's as up to date as

possible. You can grab the latest one from my web page/FTP site (same directory as the FAQs), or wait one more day and you'll get it in this newsgroup.

You might also want to visit my main Atari ST page as I've got a big collection of links there, as well as the sub-page with software that I mentioned and a WWW version of the FTP site list, where you can enter the sites directly!
It's all at:

http://home.sn.no/~hallvart/pages/atari.html

Hope this helps.

Hallvard

I see, but to add a name of a logfile as an environment variable? That's a
bit odd? Or perhaps I'm mistaken- does "logname" have anything to do with
Packshell's files, and not "environ.dat"/"environ.prg" at all?

>HOSTNAME is the name of your computer.
>
>HOSTNAME=WEASEL
>
>Nothing special to it. I'd recommend limiting your hostname to 8 characters

OK. I've never come across any of these variables before- when are they
ever used? Is it something special just for use with Packshell?

>Just joking. :-))

On this server, we can joke, but if you just went on the
fr.comp.sys.atari your blood should become frozen ...

They are always fighting about such subjects ... it is in fact
incredible. There are two parties:
> one which believes in the futures projects like Phenix (I have talked
to Rodolphe Czuba, the master of the project and believe me it's a serious
matter ... wait and see ... soon there will be a web site with
description of all the CENTEK products ... I will put an article on
the server when this happens)
The "CenTurbo 2" is a real jet for a Falcon ... the only problem until
now (soon to be solved) is the use of TT ram adjunction ... but available
video modes are stunning ... a friend of mine who owns a F030 is going
to buy it ...
> the second one is going to not believe anything ... each time a
project is put on the table (even if the project is already begun)
they destroy it as fast as it appears on the server ... obviously
negative.

Really I prefer to read the comp.sys.atari.st !

Thanks for the reply.

I think the exited by signal 15 message is a result of me
resetting the computer (my disconnect script doesn't want to cooperate
sometimes).

I can't really tell how stable my PPP connection is because, of
course, I can't really do anything with it to test it yet.

What's KEMD?

Oh well, only 8 days left to figure this out!

If that's one of the SLM-series printers, it does NOT work with the Falcon -
the SLM laser printers use the ACSI DMA interface, and that port was left
off the Falcon.

Good price, though. Could I interest you in a swap for a 2-gig hard drive?

It might be named LZHShell but it doesn't use the TTP - it's all
self-contained.

Delete (or move) the TTP file to see that this is the case.

u> One of the members of my computer club wants to know if there is
u> a driver for a HP colour printer available for Degas Elite. If not,
Recommend Imagecopy, it gives the highest quality printouts IMHO. Can be run as an accessory or program, it's a commercial product published by the FaST Club here in the UK.

u> is there any other art program which has a HP colour driver? The
There are other progs, PiXArt comes to mind, but if your clubmate is happy with Degas then Imagecopy would be a better choice, eg you can printout thumbnail catalogues etc.

w> Organization: Cool People
w>
w>
w> Can someone help me on the lascan program. Someone told me it is for
w> a Falcon only but I am not really clear on what it does. I think it
w> is for the auto-switch overscan but I don't even know what that is.
LaceScan is for the ST only, the hardware will not work on the STE or Falcon.
You have to cut the Display Enable line and feed it to the hardware, which
modifies that signal to tell the video shifter to display a larger picture by
expanding the screen into the borders. The latest version is 3.3, which has
ST-Guide hypertext docs on how to find the place to cut the signal and where
to connect the other wires that are required.

w> I also downloaded an ET4000 upgrade thing. I know you can buy the

Good luck on this, someone in the UK is/was working on the translation IIRC,
but the PCBs required are double-sided so might be tricky to reproduce.

>once was, [Snip big over-melodramatic Sap Letter]

Get a grip guys... I was once an Atari User and all I had to look
forward to was a lack of software, non-existant tech support, buggy
operating systems (TOS Ring a bell?) and always wanting to do what the
Mac and IBM (Not to mention AMIGA) could do..never really achieving
it. The real Evil was the Tramiels who couldn't get off their fat
white asses and market the machines they produced properly, or for
that matter at least care about their customers... I think when I had
to send away money for a floppy cable from Britain is when I woke up
and grabbed a clue... A big blue clue... So Windoze (and still isn't)
as bug free as they said it is. Well, you're dead wrong if you think
that TOS was some big model of perfection...Far from it.

In my opinion, the Jaguar was a hastily produced, crappy fragile
machine that was once again marketed half-assed with games that looked
like 2nd generation Genesis and SNES titles... Pretty sad for a
so-called 64-bit machine.. And here's a correction... The Jaguar was
one 32-bit and 2 16-bit Symettric multi-processors. There is nothing
64-bit about the jaguar at all. Except if you add the processors's
together, which is one big cop-out.

The only hope for Atari is that they don't lose even more money, or
for humanity's sake, the Tramiel's going into business again... I'd
certainly hate to see market share for another company jump from
thriving to downright pathetic. Monkey's could have managed Atari
better. BILL GATES could have managed Atari better...

So in the meantime let's GET OVER IT. And use the machines of today
and quit wasting time and bandwidth and being hopeless romantic's
towards people who didn't really give a shit about you or me, or
anyone..except how to make a buck a run like a petty mugger off the
street...

Reply's EXTREMELY welcome...

Shellac...

If you realy want to be able to use that lovely monitor of yours in highres
mode you shuld realy consider getting a SuperNova. Okey it's expensive, but
it's currently the only solution to give you realy nice graphics modes in
24 and 32 bit colour mode (16 and 256 and 65000 colours as well ofcourse).

I'm not sure if CAF likes the Nova though, but it should. Maybe someone
in here knows, or even better, ask the maker of the Nova him self at.

Gerhard_Huber@la.maus.de or CiEBV@aol.com

The SuperNova cost ~ 860 DM if you get it from them directly.
There are cheaper models if you don't care about the highres 24-bit or
32-bit modes and you doesn't use them very often anyway, atleast not
if you run CAF. 16-bit colour is enough for most graphics programs as
well.

If I have understod it correctly, this problem were due to a bad
harddisk driver and went away when they changed it.

> Also, I understand the fast RAM cannot be utilized for sample
> playback, but may be utilized by CAF itself.

Yup and that hasn't got anything to do with the AB040, it's how
all Atari computers work with Fast-RAM. You can't use it to play
samples.

> Corrections, please? I will be upgrading my Falcon at some point, but
> I need absolute CAF compatibility.. and I really want to speed up

# 2141. New ST/Falcon Game

Newsgroup: comp.sys.atari.st
Date: 1997-01-31 00:00:00 UTC
From: Andy Robertson <andrew.robertson@scomagg.co.uk>
Message-ID: <32F1B74D.3B1F@scomagg.co.uk>
Source record: 128674

Hi,

I'm starting work on a new ST/Falcon game called Universal Command. It's a space strategy game along the lines of Supermecy with elements of Civilization and I need ideas for it.

I have a rough spec for the game that I can send to anyone if they are interested in having a look and commenting on it.

I really need as many ideas and suggestions as possible. Of course, everyone will be credited in the game etc.. :))

I don't want to scrap this game but I as I have said before I need ideas for it.

It will be ported to the Jaguar if their is people wanting to play such a game.

Andy Robertson

PS. Tony, I started it last night so my period of threatening everyone is over! :) hehe...

From: irata@mindspring.com
Message-ID: <5csjmt$hg8@camel2.mindspring.com>
Source record: 128676

I used to run a BBS when I was living in Alaska and had a great time with it. The name of the BBS software is ( Triplink ) I'm not sure what version they are up to now. It is written in GFA 3.5e last I remember. I'm not sure where you might be able to find except at Genie or Compuserve in the Atari files areas. I was a help in getting CD-ROM support for the BBS and other minor enhancements. The BBS will run on an ST and above.

Yes.

>But I still don't understand what on earth Packshell needs my email address
>for, and it worked fine even without these two environment variables.

As I said before - why don't you read what I write, Hallvard? -
mpack.ttp needs the two env vars. You can see why if you generate a
MIME message; mpack constructs a header with your full email address.

>In fact, I don't even understand why the "tmp" (temporary directory) has to
>be set, because like you told me to, I added the full path to it in the
>"MIME" command line: -o c:\tmp\mime $f

Sigh. You added the full path to the output file (option `-o'). The
fact that the file will be put in your temp directory is pure
coincidence. It could have been any directory. But munpack needs to
know the path to your temp directory in case it has to unpack a
multiple message. In that case the program saves all the different
parts first in a directory $TMP\parts, and when they are complete,
reconstructs the original file (binary).

>I'm a bit confused...

As usual... :)

I'm not going to dispute this. But you should aim your critical arrows
at the authors of mpack/munpack, who are native speakers of (American)
English and well versed computer nerds.

-----BEGIN PGP SIGNED MESSAGE-----

I'm reposting this here on behalf of Colin Fisher-McAllum, SysOp
of 42 BBS, as he hasn't quite mastered his usenet stuff yet.

Point of note: before anyone asks - yes, Daron does know that
this is being posted. In fact, he specifically requested that
Colin post something to let everyone know what was going on, and
why the NeST BBS network would be down.

Please don't email either Colin or I about this: everything
either of us knows is contained within this message.

I also urge all of you to think before posting any replies.
Remember that judicial laws state that someone is innocent until
proven guilty - Daron is a well-respected member of the Atari
community, and idle speculation would only harm his reputation.

Original from Colin Fisher-McAllum follows:

==========
====
I am sorry to say that until other arrangements can be made,
NeST is
closed.

Daron Brewood was raided this morning and all his equipment
impounded
subject to an investigation into computer pornography.

Regards

Colin

> matter ... wait and see ... soon there will be a web site with
> description of all the CENTEK products ... I will put an article on
> the server when this happens)

Well this all sounds very interresting. I guess we just have to sit
back and wait... wait until something show up. I whish them good luck.

> The "CenTurbo 2" is a real jet for a Falcon ... the only problem until
> now (soon to be solved) is the use of TT ram adjunction ... but available
> video modes are stunning ... a friend of mine who owns a F030 is going
> to buy it ...

I guess it gives you about the same as the Nemesis + Fast-RAM and a
higher clocked 030 right? Something like a 24MHz bus and 48MHz CPU
and Fast-RAM. Is this true Fast-RAM or the 'crap' FX RAM?

Sounds alot better than the FX card if they can manage to get it working.
I heard (probably from the other partie) that the Centurbo 1 didn't work
very well at all.

> > the second one is going to not believe anything ... each time a
> project is put on the table (even if the project is already begun)

> negative.

But so far we havn't seen much of either the Phenix or Evolution.
Great ideas both of them though.

> Really I prefer to read the comp.sys.atari.st !

Yup.

>
>Why not use the Help-key?

Because AES doesn't return from pull down menu before a mouse
click. Therefore Kivi has no way to tell if Help key has been
hit in the menu. However the Help-key does work during the program.
For example pressing help key in some of the dialogs will display
help page about it.

## 2151. SCSI Hard Drives Forsale

Newsgroup: comp.sys.atari.st
Date: 1997-01-31 00:00:00 UTC
From: gholmes@ns.sympatico.ca
Message-ID: <32f31147.20247151@news1.ns.sympatico.ca>
Source record: 128684
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I have the following SCSI hard drives for sale:

Quantum DSP3053L SCSI-2
Formatted 535 Mb
Cache Buffer 512k
Average Seek 9.5 ms
Rotational Speed 5400 RPM $325.00

Maxtor LXT-340SY SCSI-2
Formatted 340 Mb
Cache Buffer ?
Average Seek 12 ms
Rotational Speed 3600 RPM $225.00

Reason for selling, moving up to a 4.2 gig Baracuda

If interested, you can call me at 860-0302
(Waverley/Fall River/Wellington)

Thanks..

>thing is on the outside of the unit it says (Link) - NOT LINK 2!... If
>this is a Link2 should not it say Link2? Anyone jnow the difference?

I also bought a "Link II" labelled "The Link", but it's definitely a Link
II- you can tell by a red LED (light) on one side of the unit. Only the
Link II has it, and not the Link (I).

ICD told me that they had a lot of "Link" labels left over, so they used
them up before printing new "Link II" labels.

## 2154. Help with Oasis!

Newsgroup: comp.sys.atari.st
Date: 1997-01-31 00:00:00 UTC
From: thechyld@eastky.com
Message-ID: <854710958_OASIS_@eastky.com>
Source record: 128687

I've switched ISP's and Oasis is driving me mad! <crazy grin!> Well, not quite but almost... I've gotten everything to work except being able to read newsgroups! It logs on to my news server, says its connected, then says "closing news session" without every downloading anything. I set the trace level to 3 to see what was going on, but it only says:

230 New news follows

then it gives a blank line and a line telling that 2 char. and 0 bytes were downloaded... I even set the date/time in nntp.dat back 5 days so I could be sure that there were messages but it still does the same thing. I talked to my ISP and read the config. to him and he said everything looked fine, and the news server was working okay, so...Can anyone help me with this problem at all? If so then E-Mail, please because I won't be able to see any messages posted here! :(

On the ICD Link 2, you must absolutely read "ICD The Link 2"
you can also see a little red LED replacing the point of the "i" of
Link.

Insufficient data. What SCSI ID# is the Syquest set to? (I have a nickel
that says the Supra is ID#0, so that one's easy).

My best guess based on the meager data you provide is that you have a SCSI
ID conflict; let's start from there.

(posted and mailed)

Take a look at your NNTP.DAT file (I think that's the right one; haven't
used NOS in a while). there should be some numbers there for each newsgroup
- those indicate the last article number fetched. Change 'em all to zero -
chances are the new ISP is NOT using the same numbering scheme as the old
ISP.

Then if that fails, we can look for other causes.

I would also reccomend CoNnect as the best, but in your glowing
report Mario, you missed the very important point that there is a
shareware time limit built into ConNect that runs out after x amount
of hours, then you have to register and it costs very expensive, over
30ukp IIRC?

Again I do think its worth it as its the best one for the ATARI IMHO
but when the guy is looking for PD/Shareware I doubt he was looking
for commercialy priced shareware?.....even if it is worth it:)

Cheers.............!ynoT

## 2183. GDOS Fonts...

Newsgroup: comp.sys.atari.st
Date: 1997-01-31 00:00:00 UTC
From: Richard Wegner <richardw@dmapub.dma.org>
Message-ID: <Pine.SV4.3.91.970131143313.21736A-100000@dmapub.dma.org>
Source record: 128716

I finally got Timeworks Publisher ST to print to my SLM804 Lazer Printer. I am wondering, is there a way to add more fonts than what came with it? Do I have to re-install it and instead of saying BASIC Fonts, I choose the other one? Also, where can I get a bunch of them? Is there a specific site (ftp or web) where I can get them? I would be very much appreciated in this. Also, was there a higher version of GDOS than 1.1 and is it any better?

# 2184. Atari ST BBS programs

Newsgroup: comp.sys.atari.st
Date: 1997-01-31 00:00:00 UTC
From: James Anderson <0James@msmlab.byu.edu>
Message-ID: <0James-3101971309110001@128.187.141.103>
Source record: 128717

I ran The Great Underground Empire BBS about 10 years ago on an 800xl with a 20 meg hard drive--(let me tell you, back then as I'm sure most remember, we were big!)

I would like to set a BBS up again. I still have my 800xl and an Atari 1040ST. I am trying to decide which system to use to run the BBS. Does anyone have any suggestions?

I was using a program called CArina II for the 800xl--it was partly written in machine language, and the other part basic. It is a very easy program to work with and change.

I'm not too familiar with atari ST BBS programs--what choices do I have and what features set them apart?

Any help would win a free lifetime membership to the BBS. (Actually, the membership will be free for everyone, but I thought I would throw the idea into this message to generate some replies.)

Please HELP>

James.Anderson@Juno.com

> Will there be a new release ?

Yes Bad Mood is plodding along but the main programmer at the moment,
Doug Little is concentrating on a few other programs.
But a few of the old programmers are now back with the project.
Basically everyone involved leads busy lives !

There is ver 2.15 which has some changes to the video modes the game can
run in ... this is on my Web Page somewhere ...

There is also another Doom clone called Running which looks like it is
near to completion (or so there Press Release said ...)
There is also a link to the Running HomePage from my Links aswell (I'm
too lazy to cut'n'paste for you !)

Regards,

Simon

> Good Grief!

Of course it's silly to suggest that NeST may have been used for porn transmissions - this is categorically not the case, and I apologize if my original posting may have caused anyone to think this. Simply, NeST is down (in the UK, at least) as all of Daron's equipment has been seized. No other reason - NeST itself has nothing to do with it.

> Well, while the bobbies are busy trying to pull their heads out - NeST USA

(posted and mailed)

Take a look at
ftp://wuarchive.wustl.edu/systems/atari/umich.edu/Utilities/gfont114.zip for
a GDOS font manager. There are hundreds of fonts available from various ftp
sites - just a few located in
ftp://wuarchive.wustl.edu/systems/atari/umich.edu/Utilities/gdosfont.arc and
many others all over the place.

Later versions of GDOS are AMCGDOS, FONTGDOS, SpeedoGDOS, and (providing
GDOS funtions in addition to screen accelleration) NVDI. AMC and FontGDOS
are available from various ftp sites. Speedo and NVDI are commercial
software.

>I would like to set a BBS up again. I still have my 800xl and an Atari
>1040ST. I am trying to decide which system to use to run the BBS. Does
>anyone have any suggestions?

I'm personally sold on Octopus. Take a look at
http://www.worldaccess.nl/~kooskuil/octopus.htm for many of the reasons I
use it.

>I was using a program called CArina II for the 800xl--it was partly written
>in machine language, and the other part basic. It is a very easy program
>to work with and change.

I believe Shadow Software here in Portland, OR is maintaining Carina now
(though I could be mistaken). However, unless you plan to limit your system
to local message bases only, or QWK packet networking, I think you'd be well
advisedto use the ST as the BBS computer.

>I'm not too familiar with atari ST BBS programs--what choices do I have and
>what features set them apart?

Octopus (heavily supported and a VERY active developer), RATsoft (dormant
developer, requires extra modules for Fido-style networking and I dunno what
all else), ST-Keep, Fnordadl, STadel and a number of similar room-based
systems (mostly free or very inexpensive), Transcendence (freeware now, I
think), Foresight (supported), QBBS-ST (supported but somewhat up-in-the-air
and behind the power curve in many areas)... There are others. I have the
complete source code for RBBS-PC (in BASIC, mostly) if you want to do it
yourself - that's PD.

>Any help would win a free lifetime membership to the BBS. (Actually, the
>membership will be free for everyone, but I thought I would throw the idea
>into this message to generate some replies.)

Unless I can access it via Telnet or locally, that won't help me much. <G>
However, I would like to invite you to join AtariNet and NeST (which is
alive and well, even though temporarily headless) once you do get up and
running.

Last E-mail I received from Rod said he was trying sell the mag. to someone in Missouri. Last issue I received was last March and I have a 2 year disk subscription!

Future Wars did work off my HD. I just copied all the files into the
same folder, and maybe had to move the "AUTO" folder prog there as
well.

I've no idea if it likes the Falcon or not but I do know that it won't
run under MagiC - unlike Civilization and Populous!

You are talking bullshit. The Jaguar _does_ handle 64-bit
instructions. Would you accept Marc Rosocha as a reference?

# 2203. **Big Atari Magazine Sale** (Over 177 available)

Newsgroup: comp.sys.atari.st
Date: 1997-01-31 00:00:00 UTC
From: tj@oro.net
Message-ID: <tj-3001971659050001@i508.oro.net>
Source record: 128811

**Big Atari Magazine Sale**

For you Atari magazine collectors, new Atari users, or veteran users
wishing to re-kindle some Atari spirit, I have organized all my Atari
magazines collected over the years and have put them up for sale.

$1 each for all but Atari World.
$5 each for Atari World.
Volume discounts available. Make me an offer.
---
Atari ST Informer (One of the longest active Atari magazines)
Issues #19 - 23, 25-32, 34 - 41, 43 - 68, 70, 72 - 76, 79 - 83, & #96.
Total of 59 issues.

Current Notes (Another long time Atari magazine)
Volume 8 series #8 & #9
Volume 9 series #3, #6, & #7
Volume 10 series #7
Volume 11 series #5, #7, & #9
Volume 15 series #1 & #3
Total 11 issues.

ST World (Like ST Informer)
#37,39,43,45,49,50, & 57
Total 7 issues

Atari ST Journal (I thought one of the best USA magazines)
Summer 1990, Oct/Nov 1990, Dec/Jan 1991
Total 3 issues.

Atari User (Replaced Atari ST Journal)
May 91 thru Dec 91
Jan 92 thru July 92
Sept 92, Nov 92, & Oct 93
Total 18 issues.

STart (Nice glossy Atari magazine)
Special issues #1 & #2
Volume 1, #3 & #4
Volume 2, #1, #2, #3, & #5
Volume 4, #12
Volume 5, #1, #2, #3, & #6
Total 13 issues

Atari Advantage (Short lived but nice)
Volume 1, #1 & #5
Total 2 issues

Processor Direct (Nice glossy Tabloid, only one issue made it)
Premiere Issue (The one any only)

ST Log (Sprang from Analog magazine)
#12, 14, 15, 20 - 27, 29, 31, 33 - 36
Total 17 issues.

Atari ST Explorer (Atari's own magazine)
Spring 1997, Mar/Apr 88, July/Aug 88, Sept/Oct 88, Nov/Dec 88, Jan/Feb 89,
Mar/Apr 89, May/June 89, Nov/Dec 89, & Mar/Apr 91.
Total 10 issues

ST X-Press (Nice, I think from Canada???)
Volume 1, #8, #9, #10
Volume 2, #1, #3, #7, #8
March 89 thru May 89
June/July 89, Aug/Sept 89, Oct/Nov 90
Total 13 issues

Compute!'s Atari ST
April 88
Total 1 issues

Atari World (Started in 1995, from England. VERY VERY Nice!!!)
#2, 4, 6, 7, 8, 10, 11
Total 7 issues... I read them over and over......

Jaguars Edge (Small Jaguar game magazine)
#1, and the last one.

Atari Pro (From the makers of Atari World)
#2

ST Source (From the makers of Atari World)
#2

ST Format (Another awesome England magazine)
#9, 22, 25, 80, 81
Total 5 issues

ST Action (England Atari gamers magazine for ST's)
#25

ST World (England magazine)
one issue, who knows when....

Atari ST User (Another hot England magazine)
Volume 4, #9
Volume 5, #3
#56 and #69
Total 4 issues

ST Applications
June 1987

Therefore, I have a total of 177 Atari magazines from the 80's and 90's. Served me well.....

If you want the whole lot, make me a offer that I can't refuse. I will UPS them to you.... We can discuss payment methods. If you need only certain ones, we can discuss volume prices.

Thomas

```
Here's this year's first update to the FTP site list!
A few changes this time:

ftp.uni-duisburg.de * /pub/atari/ (NEW!!!!!!) Small site
ftp.uni-stuttgart.de /pub/systems/atari/ (DELETED)
ftp.hrz.uni-kassel.de * /pub3/atari/ (small site/new dir path)
ftp.on-luebeck.de * /pub/systems/atari/ (small site)
ftp.informatik.rwth-aachen.de /pub/comp/Atari/ (small site)
ftp.uni-giessen.de * /pub/atari/ (small site)

(* = small/specialized site site)

Enjoy!

PS. The WWW version of the FTP list has/and always is updated along with
this text version as well! URL in signature below.

MIRROR SITES
---
FTP mirrors are alternative sites to certain popular ones which are
usually under a high load most of the time (many people accessing them
at the same time).
Mirror sites contain the exact same directories and files, but have
different entry points. Try to use the one closest to you geographically
and not during business hours (in that geographic area).

MAIL SERVERS
---
Mail servers can be used to get hold of the same software as through FTP,
but instead of using a lot of download time online, files can be 'ordered'
via email.
In order to get information about how to do this, send an email to the
various addresses below with the word: help
in the mail itself. If possible, do not include any 'signature' in the mail,
as the automated system which replies to these mails tries to interpret any
message (and with a certain amount of errors no response to your requests

will be given at all).

HOW TO GET FILES VIA FTP
---
Below follows a step-by-step guide on how to get hold of files via FTP.
Your specific version of the FTP program might differ slightly (it might
have extra functions and be more user friendly etc.) But the main procedure
is likely to be more or less the same.

The examples below are taken from a Unix environment using the usual
'ftp' program. The more user friendly 'ncftp' is recommended though,
as it's easier and more efficient to use.

[1] Starting FTP/logging into FTP site
==========

What to type What it does
---
ftp [ENTER FTP MODE]
open FTPsite-address (i.e: open ftp.funet.fi) [OPEN THE FTP SITE]
anonymous (when asked for username) [INSERT USERNAME]
USERNAME@SITE (your email address- i.e. hallvart@sn.no) [INSERT PASSWORD]

Example:
---
oslonett.no% ftp [ENTER FTP MODE]
ftp> open ftp.cs.tu-berlin.de [OPEN THE FTP SITE]
Connected to caramba.cs.tu-berlin.de.
220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.
Name (ftp.cs.tu-berlin.de:celine): anonymous [INSERT USERNAME]
331 Guest login ok, send your complete e-mail address as password.
Password: celine@geonet.com [INSERT PASSWORD- (NOT SHOWN)]
230-You have reached Berlin, Germany. Access is allowed all day.
---

** You can also enter a site and start ftp at the same time:

ftp FTPsite-address (i.e: ftp ftp.cs.tu-berlin.de) [START FTP/OPEN SITE]

Example:
---
oslonett.no% ftp ftp.cs.tu-berlin.de [START FTP/OPEN SITE]
Connected to caramba.cs.tu-berlin.de.
---

** It's also possible to use the IP number instead of the usual FTP
site address:

ftp IP.number (i.e: ftp 130.149.144.4) [START FTP/OPEN SITE WITH IP NO.]

Example:
---
oslonett.no% ftp 130.149.144.4 [START FTP/OPEN SITE WITH IP NO.]
Connected to 130.149.144.4.
220 caramba FTP server (wu-2.4/fb13[34] 18-Feb-1995) ready.
---

_____

[2] Preparing for file downloads
==========

cd /directory/ (i.e: cd/pub/atari/) [MOVE TO DESIRED DIRECTORY]
bin [SET TRANSFER MODE TO BINARY]
ls -l (or: dir) [SHOWS A DIRECTORY LISTING WITH FILE-LENGTHS]

** Some FTP sites don't accept 'ls -l' for some reason. In those rare cases
use 'ls' instead (or use 'dir').

Example:
---
ftp> cd Music/ [MOVE TO DESIRED DIRECTORY]
ftp> bin [SET TRANSFER MODE TO BINARY]
200 Type set to I.
ftp> ls -l [SHOWS A DIRECTORY LISTING WITH FILE-LENGTHS]
150 Opening BINARY mode data connection for /bin/ls.
total 4624
-rw-rw-r-- 1 ftpadm atarimod 3409 Feb 19 12:48 00INDEX
-rw-rw-r-- 1 ftpadm atarimod 37419 Mar 18 1993 50play12.lzh

---

** If you want to go back one directory:

cd .. [GO BACK ONE DIRECTORY]
cd /. [GO DIRECTLY BACK TO ROOT DIRECTORY]

_____

[3] Downloading files
==========
get filename (i.e: get letemfly.zip) [GET FILE]

```
Example:
---------------------------------------
ftp> get setseek.zip [GET FILE]
200 PORT command successful.
150 Opening BINARY mode data connection for setseek.zip (3825 bytes).
########
226 Transfer complete.
ftp>
---------------------------------------

Several files at once:
----------------------
mget filenames (i.e: mget ao.lha xyz.zip ps.txt) [GET SEVERAL FILES]

Example:
---------------------------------------
ftp> mget silkmous.zip snip.zip [GET 'SILKMOUS.ZIP' AND 'SNIP.ZIP']
mget silkmous.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for silkmous.zip (22086 bytes).
##########################################################
226 Transfer complete.
mget snip.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for snip.zip (17852 bytes).
#########################################
226 Transfer complete.
ftp>
---------------------------------------

** You can also use 'wildcards' to ease the whole procedure of typing file-
names correctly:

Example:
---------------------------------------
ftp> mget ma* [GET ALL FILES STARTING WITH 'ma' IN CURRENT DIRECTORY]
mget maccell33.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maccel33.zip (9012 bytes).
##################
226 Transfer complete.
mget mauswind.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for mauswind.zip (49373 bytes).
##############################################################################
##############################
226 Transfer complete.
mget maxidisk.zip.zip? y [DO YOU WANT THIS FILE (y/n)?]
150 Opening BINARY mode data connection for maxidisk.zip (20970 bytes).
########################################
226 Transfer complete.
ftp>
---------------------------------------

** you can also use a 'wildcard' to get hold of single files or a specified
selection. Just be sure the wildcard is unique.
```

i.e. if you want to download 'stzip26.lha' and there are no other files which start with the letters 'stz', you can type: mget stz*.

You can also download all files within a directory with a single command: mget *

PS. you have to use 'mget' with wildcards- 'get' won't work!

Hint: if you're using 'mget' a lot and don't want to be asked if you want this file or not, you can use the command 'prompt'. FTP will then proceed to get all the files that match your wildcard without asking if you want them.

Example:
---
ftp> prompt [TURN OF 'GET THIS FILE (y/n)?']
Interactive mode off.
ftp>
---

_____

[4] Ending your FTP session
---
close [EXIT CURRENT FTP SITE, READY FOR A NEW FTP CONNECTION]

Example:
---
ftp> close [EXIT CURRENT FTP SITE, READY FOR A NEW FTP CONNECTION]
221 Goodbye.
ftp> [FTP IS READY FOR A NEW CONNECTION- 'OPEN...']
---

quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]

Example:
---
ftp> quit [EXIT CURRENT FTP SITE/FTP MODE, RETURN TO UNIX]
oslonett.no% [BACK IN UNIX]
---

** When doing a 'close' and re-entering a new FTP site you won't have to set up features like 'bin', 'prompt' and 'hash' again.
You will however have to set it up again if you choose to 'quit', then restart FTP.

>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>>

A SHORT SUMMARY OF FTP COMMANDS/PROCEDURE
==========
ftp
open {FTP site address} [OPEN FTP SITE]
Username: anonymous
Password: {your email address}

```
cd {directory/directory etc.} [GO TO DIRECTORY]
bin [SET TO BINARY TRANSFER MODE]
hash [DISPLAY '#####' CHARACTERS FOR VISUAL CONFIRMATION OF DOWNLOAD]
ls -l (or dir) [FILE/DIRECTORY LISTING WITH LENGTHS]
get {filename} [GET A SINGLE FILE]
mget {filename filename filename filename} [GET SEVERAL FILES]
quit [EXIT FTP SITE/EXIT FTP MODE]

Other useful commands to know
=============================
stat (or status) [DISPLAYS USEFUL INFORMATION ABOUT SETUP]
prompt [TURNS ON/OFF 'GET THIS FILE (y/n)?']
get {filename} - (i.e: get 00index -) [DISPLAYS TEXT FILE ONLINE]
!host {FTP site} (i.e: !host ftp.sn.no) [SHOWS IP ADDRESS OF SITE]
help [DISPLAYS A LIST OVER FTP COMMANDS]
help {command} (i.e: help bin) [EXPLAINS COMMAND]

FTP commands
------------
! escape to the shell
$ execute macro
account send account command to remote server
append append to a file
ascii set ascii transfer type
bell beep when command completed
binary set binary transfer type
bye terminate ftp session and exit
case toggle mget upper/lower case id mapping
cd change remote working directory
cdup change remote working directory to parent directory
chmod change file permissions of remote file
close terminate ftp session
cr toggle carriage return stripping on ascii gets
delete delete remote file
debug toggle/set debugging mode
dir list contents of remote directory
disconnect terminate ftp session
form set file transfer format
get receive file
glob toggle metacharacter expansion of local file names
hash toggle printing '#' for each buffer transferred
help print local help information
idle get (set) idle timer on remote side
image set binary transfer type
lcd change local working directory
ls list contents of remote directory
macdef define a macro
mdelete delete multiple files
mdir list contents of multiple remote directories
mget get multiple files
mkdir make directory on the remote machine
mls list contents of multiple remote directories
```

```
mode set file transfer mode
modtime show last modification time of remote file
mput send multiple files
newer get file if remote file is newer than local file
nmap set templates for default file name mapping
nlist nlist contents of remote directory
ntrans set translation table for default file name mapping
open connect to remote tftp
prompt force interactive prompting on multiple commands
proxy issue command on alternate connection
sendport toggle use of PORT cmd for each data connection
put send one file
pwd print working directory on remote machine
quit terminate ftp session and exit
quote send arbitrary ftp command
recv receive file
reget get file restarting at end of local file
rstatus show status of remote machine
rhelp get help from remote server
rename rename file
reset clear queued command replies
restart restart file transfer at bytecount
rmdir remove directory on the remote machine
runique toggle store unique for local files
send send one file
site send site specific command to remote server
Try "rhelp site" or "site help" for more information
size show size of remote file
status show current status
struct set file transfer structure
system show remote system type
sunique toggle store unique on remote machine
tenex set tenex file transfer type
trace toggle packet tracing
type set file transfer type
user send new user information
umask get (set) umask on remote side
verbose toggle verbose mode
? print local help information

** Most of these commands work as 'on/off switches'. Each time you enter the
command it switches over to the opposite position (from on to off or
vice versa). If you're not sure about it's position, type: stat
(or: status) which will show your setup.

Be sure to check if transfer mode is set to 'bin'!!!! (if you try to
download binary files in ASCII mode all your downloads will be useless!-
You can download text files as binary as well, though you sometimes might
have to convert the end-of-line characters afterwards-
(get hold of 'unix2st.ttp' or similar program for this).
```

you might be using the same SCSI ID, that's how the drives figure out
who the computer's talking to. Check both (one at a time since you
can't get them working together with something like IDCHECK..PRG
from ICD. Then change the drive ID of the Syquest, it's the button on
the back, switchable from ID 0-6, but 6 is normally your host adaptor
on a ST.

# 2207. Re: Monitors - NEC 5D

Newsgroup: comp.sys.atari.st

J> 60Khz and Horisontal refresh rate of 50Hz to 90Hz so I think the
J> answer your looking for is 50 to 90 Hz, That will run fine on a
J> Atari. --
Thanks for that. I actually think its the horizontal refresh that is
important as I would need 15.5Khz for the RGB modes on the Falcon which it
would appear the 5D cannot do :-(

RT> any government
RT> project is likely to be).
I know its an aside but I believe when they repaired the Hubble
telescope they fitted a maths coprocessor to it to "speed up its image
tracking". The one they fitted I think was an 8087, making the
tracking cpu an 8086! :-)

So in my case, with my email address "hallvart@sn.no), I should add these
two lines to my "environ.dat" file:

LOGNAME=hallvart
HOSTNAME=sn.no

But I still don't understand what on earth Packshell needs my email address
for, and it worked fine even without these two environment variables.
In fact, I don't even understand why the "tmp" (temporary directory) has to
be set, because like you told me to, I added the full path to it in the
"MIME" command line: -o c:\tmp\mime $f

I'm a bit confused...

## 2211. **Big Atari Magazine Sale**

Newsgroup: comp.sys.atari.st
Date: 1997-01-31 00:00:00 UTC
From: ercorp@aol.com
Message-ID: <19970131011500.UAA12909@ladder01.news.aol.com>
Source record: 128819

**Big Atari Magazine Sale**

For you Atari magazine collectors, new Atari users, or veteran users
wishing to re-kindle some Atari spirit, I have organized all my Atari
magazines collected over the years and have put them up for sale.

$1 each for all but Atari World.
$5 each for Atari World.
Volume discounts available. Make me an offer.
---
Atari ST Informer (One of the longest active Atari magazines)
Issues #19 - 23, 25-32, 34 - 41, 43 - 68, 70, 72 - 76, 79 - 83, & #96.
Total of 59 issues.

Current Notes (Another long time Atari magazine)
Volume 8 series #8 & #9
Volume 9 series #3, #6, & #7
Volume 10 series #7
Volume 11 series #5, #7, & #9
Volume 15 series #1 & #3
Total 11 issues.

ST World (Like ST Informer)
#37,39,43,45,49,50, & 57
Total 7 issues

Atari ST Journal (I thought one of the best USA magazines)
Summer 1990, Oct/Nov 1990, Dec/Jan 1991
Total 3 issues.

Atari User (Replaced Atari ST Journal)
May 91 thru Dec 91
Jan 92 thru July 92
Sept 92, Nov 92, & Oct 93
Total 18 issues.

STart (Nice glossy Atari magazine)
Special issues #1 & #2
Volume 1, #3 & #4
Volume 2, #1, #2, #3, & #5
Volume 4, #12
Volume 5, #1, #2, #3, & #6
Total 13 issues

Atari Advantage (Short lived but nice)
Volume 1, #1 & #5
Total 2 issues

Processor Direct (Nice glossy Tabloid, only one issue made it)
Premiere Issue (The one any only)

ST Log (Sprang from Analog magazine)
#12, 14, 15, 20 - 27, 29, 31, 33 - 36
Total 17 issues.

Atari ST Explorer (Atari's own magazine)
Spring 1997, Mar/Apr 88, July/Aug 88, Sept/Oct 88, Nov/Dec 88, Jan/Feb 89,
Mar/Apr 89, May/June 89, Nov/Dec 89, & Mar/Apr 91.
Total 10 issues

ST X-Press (Nice, I think from Canada???)
Volume 1, #8, #9, #10
Volume 2, #1, #3, #7, #8
March 89 thru May 89
June/July 89, Aug/Sept 89, Oct/Nov 90
Total 13 issues

Compute!'s Atari ST
April 88
Total 1 issues

Atari World (Started in 1995, from England. VERY VERY Nice!!!)
#2, 4, 6, 7, 8, 10, 11
Total 7 issues... I read them over and over......

Jaguars Edge (Small Jaguar game magazine)
#1, and the last one.

Atari Pro (From the makers of Atari World)
#2

ST Source (From the makers of Atari World)
#2

ST Format (Another awesome England magazine)
#9, 22, 25, 80, 81
Total 5 issues

ST Action (England Atari gamers magazine for ST's)
#25

ST World (England magazine)
one issue, who knows when....

Atari ST User (Another hot England magazine)
Volume 4, #9
Volume 5, #3
#56 and #69
Total 4 issues

ST Applications
June 1987

Therefore, I have a total of 177 Atari magazines from the 80's and 90's. Served me well.....

If you want the whole lot, make me a offer that I can't refuse. I will UPS them to you.... We can discuss payment methods. If you need only certain ones, we can discuss volume prices.

Actually RTF was created by MicroSoft to be a portable text/document file format. So you're correct to use it for file transfer. Let your friend know that that it's THE MS way of transferring text/document files. I am sure after he knows that he will support you the MS way.

No it's an accelerator which let you use 640x480 TC. To get 24-bit or
32-bit colour modes you need a Nova card.

Probably like a lottery winner, they're laying low, to avoid the instant friends syndrome. I replied the next day, for a friend (because I picked up a MSTe last Nov. for about twice that price). The owner said the Mega was claimed within an hour of posting! Good to know the seller is not jumping TOS, but is moving on to a TT!

I run a FoReM ST BBS here in Las VEgas (Ground Zero BBS 702-435-7919
(FNET Node 189) 300/19200 (8N1). I don't know if any of the ST BBS Programs
are still being supported. FoReM isn't too hard to set up, and we can always
use more nodes in the FNET. Carina II always looked good to me from a callers
viewpoint.

>of hours, then you have to register and it costs very expensive, over
>30ukp IIRC?

Yes, you're right. There's a 30 hour limit in the program before you
register it and get the "key" to unlock it (which also gives you a couple
of additional features like automatic logins etc.).

I've got Connect as well, and needless to say I'm happy with it- I've
registered it. Can't remember how much it was, but 30 quid sounds like more
or less correct. But this also entitles you to a (paper) manual.
All in all I don't think it's too much to ask for such a good program.
And for 30 hours you really get to try if it's worth registering or not.
(I think it's 30 hours of online time and not just the general use of the
program).

> Again I do think its worth it as its the best one for the ATARI IMHO
>but when the guy is looking for PD/Shareware I doubt he was looking
>for commercialy priced shareware?.....even if it is worth it:)

Perhaps, perhaps not... he will at least have a chance to "try before you
buy"... But he might well be just as happy with a simpler (and cheaper)
terminal emulator.

There's no need to get mean and nasty about it!!!
Just because I (and others) don't hold the same expertise in the same
subjects as you do doesn't give you the right to patronize me!
The only way to gain more knowledge is to ask if you don't understand
something -only fools think they know everything.

If you have a problem with me asking about things I don't understand I
strongly advise you to refrain from replying/commenting on these
postings at all.
It's not like anyone's forcing you to read/reply to this group!

Rich.....dunno where you get the "extra modules" type of thing...unless
you mean a mailer and a tosser.....i didnt know Octopus came with it's
own inbuilt mailer and tosser!

Ratsoft 2.x already has it's own fido/qbbs style message modules included.

But you are correct about the "dormant" developer...we Rat Sysops are
still waiting with baited breath for Vers 3.....should be due any
year now!

m> I think that's the only difference externally, the LED tells you if
m> the link is getting power or not (from the drive it is attached to).
And electronically, the Link II supports SCSI 2, the Link (no suffix) does not, AIUI. This can be vital for such as CDROM.

# 2230. Re: What is 'Blitter'?

Newsgroup: comp.sys.atari.st
Date: 1997-02-01 00:00:00 UTC
From: Ari Feldman <ari@walrus.com>
Message-ID: <32F37C59.9BF@walrus.com>
Source record: 128752

Yo directly answer your question, its a graphics co-processor. Its a hardware version of a system routine used to copy pieces of data to and from screen memory. Because its in hardware its substantially faster than software doing the same thing.

It has a minor impact on text and line drawing operations (that's why you don't notice much difference). However, it really comes into its own when dealing with large graphics (such as copying screen chunks in a paint program) or in a game (when lots of sprites are being animated).

Problem is, the Blitter came rather late to the ST scene and most of the installed base of machines did not have them so relatively few programs were written to take advantage of it.

Source record: 128758

I have the following Atari computers for sale

1040 STE 4 meg of ram with built in DDS drive
1040 STFM 1 meg of ram runs excellent but needs a disk drive
520 STFM 2.5 meg of ram with built in DDS drive
Toad Stealth Hard drive 130 meg ram with ICD link adapter
Toadster Hard drive 170 meg of ram with ICD link adapter
Atri SM124 high res monochrome monitor
Atari SM124 high res monochrome monitor (needs repair)
Atari SM147 high res monochrome monitor
Atari SM1224 med and low res colour monitor
Supra 28.8 fax modem
Texas Intrument Micromarc Ink jet printer with extra ink cartridge

Some software available with the purchase of the computers. Inlcudes
joystick (2) all cables FMC clock.

Except for the equipment that needs repair all of the above items are
in excellent physical and working condition.

I would like to sell all of this equipment as a package. Any
reasonable offer will be considered. I'm in the Ottawa Ontario area.
Thank you.

> If you want, you can UUencode and email me a copy.

Adam,

This means that the file that you want i.e. gem360.zip is not found.
This could be it is in CAPS i.e. GEM360.ZIP or that it has had an
upgrade and the filename is gem361.zip now and no-one told you ...

Best thing to do is strip off the filename and look at the Web Page
normally
e.g.

http://www.emulators.com/

Regards,

Simon

Not really, I think what he's doing is sensible for one reason - if
you'd ever posted a big list of stuff for sale over the net, you'd know
- people *always* email saying "Er, have you sold such and such, I
didn't see it in the list?" unless you say SOLD in bloody great
letters... :-)

>>MS-DOS.(yuck!)

Nonono, check your history books! MS-DOS is originally copied from CP/M, and
TOS *IS* CP/M. So it's more or less the other way around, MS-DOS tries to be
like TOS (or CP/M at least). :-)

# 2246. ET4000 upgrade HELP!

Newsgroup: comp.sys.atari.st
Date: 1997-02-02 00:00:00 UTC
From: wolf39@juno.com
Message-ID: <5d107u$i61$1@news.ptd.net>
Source record: 128573

I plan to put in an et4000 card to my Mega ST. It seems somewhat straight forward and requires the card and a lot of wires :) It uses the Mega BUS but I don't know all that much about the upgrade because it is in German instructions and has Platine files (what is platine?). Can someone give me a better idea of what this upgrade is and how hard it is and what work is i involved?? Thanks.

FC> That didn't stop it getting more callers than most BBSs though...

9600 wasn't common then, so the lack of 9600 support wasn't a hindrance.

Thank Gawd for progress...

Don't panic, Frank. I belive he thinks that we are talking about 8-bit
Atari's with their disk-loadable operating systems. He's just more out of
date than Sinclap...

Ok. It sounds like it'll still be worth getting the v2.63e archive made
available, if only to get the English docs though...

f>
f> When I boot, I can see that MEMORY.SYS is loaded. I run NVDI. My
f> ASSIGN.SYS includes the device #61
f>
f> PATH = C:\DRIVERS
f> [cut]
f> 61 MEMORY.SYS
f>
f> What's wrong with it? Could you check yours please? Atari Works doesn't
f> have any problem printing, and it uses all the fonts that Papyrus uses.
f> I have MEMORY.SYS and the same ASSIGN.SYS in 3 places
f> C:\
f> C:\DRIVERS;
f> C:\GDOS.
f> Nothing happens :(

If things gets picked up by Atari Works I don't know why it's not working,
but I use a trailing backslash in the path to the drivers directory -maybe
that'll help (for some inexplicable reason...)

# 2257. Re: Gemulator Classic

Newsgroup: comp.sys.atari.st
Date: 1997-02-02 00:00:00 UTC
From: rsg0910@iglou.com
Message-ID: <E4ynv1.JEo@iglou.com>
Source record: 128584

Theodore Georgopoulos (stud0772@di.uoa.gr) wrote:

: You had gemulator classic running??!!Using a ROM card or with a TOS
: image?If with an image , how?

Quite easily. Create a directory and place everything related to the Classic in there, including GEMUL8R.EXE, GEMUL8R.INI, and MAGIC_PC.OS, as well as the .VHD files and the STHDBOOT.SEC file.

The .VHD and .SEC files can be found in the Gemulator 96 demo. Some of us don't have Win95, so you'll have to find other ways of getting them. However, I'm considering posting in the Atari binaries group what this other fellow sent me awhile ago.

A working .ini file is below...

```
rams 8
mono
quick
com1
disk c: cdrive.vhd
disk d: ddrive.vhd
disk e: edrive.vhd
disk f: fdrive.vhd
magic magic_pc.os
```

They're merely commands that you would normally enter into the program each time you would run it. If the instructions said that you put the TOS ROM file in the root, they're wrong. The last line of the .ini file tells you where it can be found. Since there's no drive letter or directory name, it looks for that file in the same directory. The com1 line is where the modem can be found, that is, what COM port. Just change that number. I've yet to see if it'll go over 8 megs of memory.

If you run Gemulator Classic without the .ini file, you'll just get the basic setup, and it'll look for the magic_pc.os file. The final line of the .ini file can be changed to have it look for your TOS 2.06 ROM image if you still have it as TOS.IMG. Just make it read 'magic tos.img' and it'll find it right there.

Once you're in the program, and find everything to your satisfaction, just tap G, and you're running.

There's a little talk in the comp.emulators.misc (is that the right name?) newsgroup, so follow it as well.

Ye gods... Maybe I should be the one to make the FAQ on how to set this little sucker up properly.

Message-Id: <5cn2qn$pqp$1@mhafc.production.compuserve.com>

And Michael said to all:

>I now have a new problem. When trying to connect to some websites
>CAB will just exit on its own and I think two bombs show on the screen

Hi Michael,

If you are having trouble with some specific Web sites, try posting them with the thread ( Re: Problem Websites for CAB ) on c.s.a.st. Others can then check them out :)

BTW, I recently was having unexplained modem disconnects which I wrote off as Server problems as we have had some very inclement weather here in the Northwest. When I finally checked the phone lines I found some very corroded connections both inside and outside the house ;) A little sandpaper and solder cured the problem. So if you notice any static, you might check...

I'm selling my mega 2 ste /4megs of ram. a color and a B&w monitor, 80meg
HD. and alot of software (no documents). It has the mitech scanner and
Spectre GCR with docs. and a few games. I'd like $250 for it all and
there is alot of stuff.

# 2271. Re: MintNet & CAB help

Newsgroup: comp.sys.atari.st
Date: 1997-02-02 00:00:00 UTC
From: caesar@nwlink.com
Message-ID: <5d2j5i$ii5$1@texas.nwlink.com>
Source record: 128598

Woo Hoo! Yippee! I got it! I got it!

So, here's the deal. I, and my SigOth decide to spend an evening in one of those new, trendy cafes with internet terminals. We browsed with Netscape and ate some really bad food. Afterward, she was really hyped by this whole Internet thing and started to get on my case about getting the Mega4 graphically online. Let me just say that her comments were a nice change from the more typical, "Get off the damned computer," or, "Get in here and pick this up," or, "whose dog is this?"

Anyway, light bulbs were beginning to illuminate the deeper recesses of my less than adequate technical lobe--cutting through the recently settled Windows95 fog. My thoughts drifted to symbolic links.

AND THERE---I FOUND MY ANSWER.

My problem was that I had not set a proper directory to CAB in my MINT.CNF file. I did not realize that CAB needed to be linked to this phantom "U:\" drive that magically appears on my computer when I run MiNT. So, when I changed this line:

sln d:\cab u:\cab

to this line:

sln d:\www130\cab u:\cab

everything was hunky-dory and I got to experience the thrill of waiting 5 minutes for a page to load! Ahhhh, the internet.

So, the long and the short of it is, I spent a year-and-a-half wracking my brain to configure my computer to my ISP, rearranging hard-drives, doing laundry for my friends, trying to explain VJ flags to underinformed tech-staff, and smiling in the face of the abject horror that was my configuration process so that my girlfriend can stare adoringly at the lovely picture of "ER" star, Noah Wylie, that frequently graces my screen these days.

Thanks for your help along the way...

(tear, sob, tear, tear, etc...)

Joel!

: >
: >: Excuse me? If an Atari ST computer isn't "real" then what, pray tell,
: >is?
: >
: >It's REAL,just not the REAL Atari.I think Commodore made the Atari,but then
: >again Commodore BECAME Atari and...

: Uhhhh... No.

: >Well,sufice it to say that it's all rather confusing.

: Apparently.

: >The whole design of the ST was always bizarre to me.The absence of a
: >textual display being the biggest one.Next to that is trying to be like
: >MS-DOS.(yuck!)

: Well, let's try this:

: Atari and Commodore have never had any business relationship whatsoever.

: Jack Tramiel was once CEO at Commodore, and after being ousted by the Board
: of Directors, purchased Atari from Warner.

: The Atari ST was more-or-less his brainchild (although, obviously, he didn't
: design it himself).

Hmn,it makes sense.A useless BASIC.And et cetera...

: The lack of a "textual display" means that it wasn't necessary to come up
: with some wierd kludge to convert a text-based word processor into a
: grpahics engine (like IBM eventually did, and now, some 12 years after
: introducing the IBM PC, the average Intel-based system has roughly similar
: capabilities that an ST had in 1984/85).

Call me crazy,but text mode would probably be ideal for a TEXT editor.

: I have no idea what you're attempting to say by "trying to be like MS-DOS."
: You may be referring to the file system - which was based on CP/M, the only

Not really.CP/M kept the FAT for a file in it's directory entry.Since
there was only room to list 16 blocks(1k),further directory entries would
be need to store the location of more blocks.
(and the filename,size and so forth of these aditional direntries would be
identical.Kind of a waste of room.Kind of like the new Windows 4 file system)
Thus if you filled up the directory(no sub-directories in CP/M) with
little one block files,leaving only one entry,a new file could only be 16k
long.Where as MS-DOS would allow the last file to fill up the disk.

: real "standard" there was when both IBM and Atari were selecting an
: operating system.

Are you talking about OSes or DOSes?!?
MS-DOS has nothing to do with CP/M.(besides having similar system
calls,they're totaly incompatible.CP/M runs on a 8080,MS-DOS on a 8086)

: Probably more by luck than any other way, TOS and MS-DOS

Since MS-DOS is the only OS of it's kind,TOS obviously ripped it's DOS and
system call interfacing style off of MS-DOS.
TOS's system calls are obviously set-up to look like MS-DOS ones just as
MS-DOS's original system calls were made to be analogues of CP/M-80's.
(CP/M-86 came out long after MS-DOS was first created)
And the DOS ("file system") could only have been stolen from MS-DOS.
No other computer (PC) would use such a useless DOS.

: for many Atari users. IF you don't happen to like it, that's fine -
: everyone is entitled to an opinion.

But not to falsehoods!

: But this is appraently an advocacy issue, so I have set followups.

I wish you'd stop doing that.

: >lines.

: If the text doesn't fit onscreen, it sounds like you need to use a smaller
: typeface.

I selected the smallest one that the programme provided.

: >: >Of course GEM is so slow that you can actually see the flicker which
: >: >occurs when the bit-planes are out of sync.

: People seem to get confused about GEM being slow. GEM does not blit the
: window contents. The window does not blit slowly because of GEM. I use
: CoNnect and I don't have this problem. Maybe you have a slow computer, or a
: slow VDI? I find CoNnect to be quite fast even on an 8MHz ST.

I just know that programmes that use GEMDOS/BIOS don't give you the colour
flicker.

: >: It's not any slower than any other GEM program regarding the display.
: >
: >That's sort of the point.It's a GEM programme and inherently slow.

: No. The GEM from an old TOS is rather slow. If you keep using a 1985
: version of GEM, it will be a bit slow. But this doesn't have much to do
: with the scrolling.

Since you need TOS 1 to run games.I doubt that I7ll upgrade the ROMs.
I'd more likely get a later TOS on disk than ROM,but that's supossed to be
impossible.

: >I keep seeing "NVDI" mentioned.What the hell is it?!?
: >(can't people usde English anymore;what's with the codewords!)

: NVDI stands for New VDI (VDI stands for Virtual Device Interface). NVDI
: replaces the VDI of the ST with a much faster version. It will make all
: your software appear to run incredibly fast compared to the normal VDI.
: It't not just a small difference, but a _huge_ difference. NVDI also
: supplies a SpeedoGDOS compatible outline font manager supporting Speedo,
: Truetype and (at extra cost) Postscript fonts.

I'd probably want to have more RAM before I start using RAM-based TOSes.

: >I have something called TurboColor that seems to speed up the GEM
: >filemanager and ST BASIC.I wasn't using it at the time,but the 14-line
: >limit makes the point moot.

: There is no 14 line limit. If the typeface is too big to fit onscreen, use
: a smaller typeface. Or maybe you have big status bars or something turned
: on.

You could never have it full screen since the desktop menu bar takes up a
line.You'd think that it could do like a amiga,where the contents of a
window can overwrite the buttons and gadgets and menu bar and such.
(you can get a 80x25 CLI window on the Amiga with a simple ANSI sequence)

: > textual display being the biggest one.Next to that is trying to be like
: > MS-DOS.(yuck!)
: > The Doctor

: I think you are _really_ confused.
: Tramiel did Commodore, Nolan did Atari.
: Tramiel left Commodore, bought Atari, voila la ST!
: Commodore still existed after Tramiel left (for a while anyway :^)

You can see the influence of him on the ST.

: ha ha
: abscence of textual display??!
: oh dear

It's hard to argue when you don't actually present a point!
Since the ST doesn't have a text mode,8 times as much data has to be moved
than on a regular computer.
And that assumes some text editor or other text programme.
A term programme that has colour will have to move 32(!) times as much
data as opossed to a regular computer.
(this assumes that the ST uses planar graphics)

: NeXT to that is trying to be like MS DOS???

"NeXT"?That's Apple!

: are we talking about the same computer system??

Well,the same DOS,and system call interface.I'd say so.
And the ST has a "BIOS" as well.

# 2279. Porn, The Net and the Law...??

Newsgroup: comp.sys.atari.st
Date: 1997-02-02 00:00:00 UTC
From: jaubrey@jaubrey.demon.co.uk
Message-ID: <854906708_OASIS_@jaubrey.demon.co.uk>
Source record: 128606
Cross-posted to: demon.ip.support.atari,comp.sys.atari.st,comp.sys.atari.advocacy

With the recent unfortunate news about Daron Brewood being linked with
a porno racket on the Net, I have a few questions to ask concerning
how the law stands. Is it illegal to download porn, keep it on your
system, or upload it(from an external source) to say, your web page?
I've only a few times come across pics I'd rather wouldn't have, and
have deleted them from my system straight away. IMHO they weren't any
worst than pics you would find in a mag, on the top shelf. Are there
any other points to be aware of regarding this matter...? It was also
said that Demon had been monitoring him for 2 years, are ISPs allowed
to do this?

Thanks,

James

So I assume that Oasis 2.x is in the meantime a dead project? It's been quite a
time and I remember a menu item stating that www support is about to come.
It's a shame that it's still not even stable.

Thanks you for your input and help though <g>.

# 2281. FS: Atari Magazines 50 cents each!!

Newsgroup: comp.sys.atari.st
Date: 1997-02-02 00:00:00 UTC
From: ercorp@aol.com
Message-ID: <19970202200401.PAA11623@ladder01.news.aol.com>
Source record: 128608

**Big Atari Magazine Sale**

For you Atari magazine collectors, new Atari users, or veteran users
wishing to re-kindle some Atari spirit, I have organized all my Atari
magazines collected over the years and have put them up for sale.

50 cents each for all but Atari World.
$5 each for Atari World.
Volume discounts available. Make me an offer.
---
Atari ST Informer (One of the longest active Atari magazines)
Issues #19 - 23, 25-32, 34 - 41, 43 - 68, 70, 72 - 76, 79 - 83, & #96.
Total of 59 issues.

Current Notes (Another long time Atari magazine)
Volume 8 series #8 & #9
Volume 9 series #3, #6, & #7
Volume 10 series #7
Volume 11 series #5, #7, & #9
Volume 15 series #1 & #3
Total 11 issues.

ST World (Like ST Informer)
#37,39,43,45,49,50, & 57
Total 7 issues

Atari ST Journal (I thought one of the best USA magazines)
Summer 1990, Oct/Nov 1990, Dec/Jan 1991
Total 3 issues.

Atari User (Replaced Atari ST Journal)
May 91 thru Dec 91
Jan 92 thru July 92
Sept 92, Nov 92, & Oct 93
Total 18 issues.

STart (Nice glossy Atari magazine)
Special issues #1 & #2
Volume 1, #3 & #4
Volume 2, #1, #2, #3, & #5
Volume 4, #12
Volume 5, #1, #2, #3, & #6
Total 13 issues

Atari Advantage (Short lived but nice)
Volume 1, #1 & #5
Total 2 issues

Processor Direct (Nice glossy Tabloid, only one issue made it)
Premiere Issue (The one any only)

ST Log (Sprang from Analog magazine)
#12, 14, 15, 20 - 27, 29, 31, 33 - 36
Total 17 issues.

Atari ST Explorer (Atari's own magazine)
Spring 1997, Mar/Apr 88, July/Aug 88, Sept/Oct 88, Nov/Dec 88, Jan/Feb 89,
Mar/Apr 89, May/June 89, Nov/Dec 89, & Mar/Apr 91.
Total 10 issues

ST X-Press (Nice, I think from Canada???)
Volume 1, #8, #9, #10
Volume 2, #1, #3, #7, #8
March 89 thru May 89
June/July 89, Aug/Sept 89, Oct/Nov 90
Total 13 issues

Compute!'s Atari ST
April 88
Total 1 issues

Atari World (Started in 1995, from England. VERY VERY Nice!!!)
#2, 4, 6, 7, 8, 10, 11
Total 7 issues... I read them over and over......

Jaguars Edge (Small Jaguar game magazine)
#1, and the last one.

Atari Pro (From the makers of Atari World)
#2

ST Source (From the makers of Atari World)
#2

ST Format (Another awesome England magazine)
#9, 22, 25, 80, 81
Total 5 issues

ST Action (England Atari gamers magazine for ST's)
#25

ST World (England magazine)
one issue, who knows when....

Atari ST User (Another hot England magazine)
Volume 4, #9
Volume 5, #3
#56 and #69
Total 4 issues

ST Applications
June 1987

Therefore, I have a total of 177 Atari magazines from the 80's and 90's. Served me well.....

If you want the whole lot, make me a offer that I can't refuse. I will UPS them to you.... We can discuss payment methods. If you need only certain ones, we can discuss volume prices.

rgeorge@peganet.com (Robert George) said:-

>I can't get That's Write to print in landscape mode on my HP-520 using The
>Deskjet+/500 driver. Any ideas?
>
>Thanks very much.

I had teh same problem myself, the manual is absolutely no help on
this and nor was Compo really when I asked them! However all you need
to do is select another driver which is called "Deskjet 500 land" or
something similar the "land" being Landscape.

If you don't have the virtual hard drives, you probably should take that
stuff out of the .ini file. The virtual hard drives should be able to be
had from the old Gemulator Windows 95 demo, which can be found here:

http://home1.swipnet.se/~w-11410/js/gem96dem.zip

just take them out of the zip file and stick them in your gemul8r
directory.

I just received an e-mail from Darek Mihocka that he would be posting
complete instructions soon

Disks are still readily available for the 44 Meg Syquest drive
which was discontinued years ago. Also, the EZ135 disks can be used in
the EZFlyer 230 so when the time comes you just upgrade to it.

>Is there software available for the PC which will run ST games.

Sadly, no. Gemulator will run a few games to an extent, mostly GEM games in a window. Most of the problem is reading copy protected disks and timing cycles which games depend on.

I have been thinking about an idea for a emulator that can play ST games much the same way the Amiga emulator does. Though I currently don't have a PC, I have theories on making this possible.

Anyone with any suggestions? :)

> Is there software available for the PC which will run ST games.

Yes, it's an external combination of hardware and software called a 1040 ST that you link to your PC with this very strong cabling called a "grapevine".

Sorry for the weak attempt at humour. There are plenty of emulators available, from free dos ones to win 95 emulators. My personal fav is:

http://www.emulators.com

There you can download a freeware dos emulator or a demo of a great win 95 emulator.

But really, none of the available emulators are said to run copy protected commercial games. You will find a few games run - the majority don't. The only reliable way to run those great old ST games is to hang on to the great old ST that went with them.

Good luck

Tom

There are a number of FoReM and Turbo BBS's around, but neither
program is being actively developed or supported. There are still about
15 active BBS's in the FNET.

Use drivers.PRG and check that the driver is not set for colour use. I had a pig of a time once with exploding drivers. It turned out that the driver was configured for truecolour use.

No it is still being actively developed athough the authours and
testers say they find it to work fine. If you have any specific
information that may help, send it on to them.

Check out the following web pages for more info:

http://www.emulators.com/index.html ('GEMulator')
http://www.aixit.com/tos2win/info.htm ('TOS2Win')

I guess there are more web pages around with information on the subject,
but even better there are lots of people in this group with first hand
experience. You might get a better chance of replies if you write something
in the "Subject" field when you send a posting to a newsgroup ;-)

# 2309. Help! I'm being attacked by an ST1040...

Newsgroup: comp.sys.atari.st
Date: 1997-02-03 00:00:00 UTC
From: Bill <bliss.b@a1.brevard.cc.fl.us>
Message-ID: <01bc1221$2d1b0ee0$b39f1ecf@bill.brevard.cc.fl.us>
Source record: 128423

Ok, well, maybe it's not attacking me...it's just being very mysterious...

Anyway, I'm an Intel PC person who has been given an Atari ST 1040. . .and being the frugal person that I am, I hate throwing anything useful away. So, since I don't have any documentation for it, and either most of the disks are corrupted or the drive is going bad (machine and disks were sitting in a garage, in boxes for about 2 years, but everything seems to be ok with it...except for many of the disks...), I thought I'd ask all you Atari Gurus...

1) Is this thing worth bothering with? (looks so very MAC like that this IBM/Intel guy is made vaguely nervous by it... ;)

2) I notice that it has a port on the back marked "hard drive." What kind of hard drive? Where can one be gotten?

3) As best as I can figure, it has about 1 meg of memory...can that be upgraded? If so, how...etc.?

4) What other types of upgrades (if any) can be done to it?

Anyway, any info would be appreciated...

Bill

## 2310. SIMMS

Newsgroup: comp.sys.atari.st
Date: 1997-02-03 00:00:00 UTC
From: ebaiz@qtm.net
Message-ID: <5d5t4h$aet$1@news2.qtm.net>
Source record: 128424

Isn't it true that SIMMS from different manufacturers are
incompatible? I recently bought some 8meg SIMMS for my Hades 060
clone and could not get them to work with the 2 4meg SIMMS included
in the machine when I bought it. I only get 16meg instead of 24meg.

## 2311. Dr. T's Software

Newsgroup: comp.sys.atari.st
Date: 1997-02-03 00:00:00 UTC
From: ebaiz@qtm.net
Message-ID: <5d5tk2$aet$2@news2.qtm.net>
Source record: 128425

I read in Atari Computing that the man who use to own Dr. T. Software has now gotten permission to put all the old Atari MIDI software on his website to be available for download. I guess all the software is going to be shareware. Anyone else heard of this or run accross the website?

# 2312. Re: Lascan and ET4000 Upgrade!

Newsgroup: comp.sys.atari.st
Date: 1997-02-03 00:00:00 UTC

Source record: 128426

In response to emwoll@emw.ericsson.se's message:

>> I also downloaded an ET4000 upgrade thing.
>
>Does anyone know where I can find this file? An english version wouldn't
>be to bad either. :-)

Hi there!
There was a (mainly German) ET4000 project which was passed to me with
very rough Ruftrade english translation from a Floppyshop pair of disks.
I am at present working on producing a full English version.

Regards
Peter West (xlator@cix.compulink.co.uk)

From: xlator@cix.compulink.co.uk
Message-ID: <E51xA4.6D6@cix.compulink.co.uk>
Source record: 128428

In response to atari@teleport.NO.SPAM.com's message:

>My best guess based on the meager data you provide is that you have a SCSI
>ID conflict; let's start from there.

Hi!
Yes, I agree. I have a setup on my STFM where an old hard disk is driven
via an old ICD Adaptec, and the DMA-out from this is connected via a Link2
to an EZ135. It now works well, *once I switched write caching off*!
The EZ135 is set to SCSI ID1, with the internal drive being 0. I am
running under the ICD driver that came with Link2.
ICDCHECK.PRG should tell you at once which adapters and IDs are
recognised.

Regards
Peter

# 2319. New Product Announcement: Microtek Scanner Driver

Newsgroup: comp.sys.atari.st
Date: 1997-02-03 00:00:00 UTC
From: Nima Montaser <nima@magmacom.com>
Message-ID: <32F6B2FB.444D@magmacom.com>
Source record: 128433

Press Release February 3, 1997
For immediate release,

ScanX:
Microtek E3/E6 Scanner driver

Homa Systems House,
Ottawa, ON CANADA

Homa Systems House, a leading developer in high quality graphics and MultiMedia solutions, once again is pleased to announce the availability of a new graphics related application for the ATARI community. Our latest
product, ScanX is a modular scanning utility that would allow access to multiple brand name flatbed scanners.
Currently, ScanX supports Microtek series of scanners, mainly Microtek E6
and Microtek E3. Support for UMAX VISTA scanners and others will be in near
future.
To make ScanX more affordable to normal users, Homa Systems House is offering two versions of ScanX, aimed for different levels of usage and users:
The BASIC & less expensive version and a more featureful PRO version.
In terms of scanning capabilities, both version are identical. However, the PRO version offers features that would be transparent to the normal user; but highly critical to more professional designers and publishers.
Some of the features of the PRO version are Monitor calibration, Zooming on prescan, multiple picture format saving, sheetfeeder and transparency support, Printing and PhotoCopying.

The street price of ScanX would be about $US 50 while the PRO version would be $US 125.

Basic Version of ScanX is available now, while the PRO vesion should be available by the end of February 1997. Users of BASIC version can upgrade to PRO version at anytime by paying the difference in the price.

ScanX: Microtek E3/E6:

Microtek E3/E6 scanner driver, a part of ScanX, is an easy to use GEM application that provides full access to most Microtek single pass scanners,
mainly the 24bit Microtek E3 & and the 30bit E6 flatbed scanners.
Microtek scanners are high quality and affordable scanners that offer full page photo quality scans in brilliant True Color.

Our GEM based interface offers accessibility to most of the features
that the scanners provide, allowing all ATARI computer users enjoy 24Bit
color scanning via a simple key click.

Microtek scanners can be used on ATARI computers with built in SCSI
port( i.e., TT030, Falcon 030), or ACSI DMA port attached to an ICD
compatible host adaptor (e.g., LINK II, ADSCSI, ...)

Here is a list of supported features by ScanX for Microtek scanners:

- 24Bit (or 30bit) (16.7 M colors), 8Bit (GrayScale), 1Bit
(Monochrome)
HalfTone and LineArt
- Variable resolution settings: 50 - Max. supported by scanner
- Contrast setting
- Brightness setting
- Exposure setting
- upto 8.5"x14" scanning area
- PreScan Window with Clipbox
- Scanning velocity setting
- 12 built-in HalfTone pattern setting
- Fast direct to disk scanning (little memory usage) for
1 & 8 Bit scanning
- Save images as IMG and TGA
- Positive or Negative scanning
- BackTracking
- 3D modern look
- MultiTasking friendly scanning
- and more...

Black & White (LineArt and HalfTone) as well as GrayScale images can
be
scanned at any resolution with minimal RAM requirements. 24Bit color
images
are however limited to amount of available RAM on the system.

Homa Systems House is dedicated to bring all ATARI users quality
hardware and software solutions. We provide a range of applications from
graphics s/w to MultiMedia CDs, as well as TrueColor Graphics cards.

For more information, please contact Homa Systems House or your
nearest dealer. For screen snapshots, product demos, and current
specials,
you may visit our WWW site at:

>in the machine when I bought it. I only get 16meg instead of 24meg.

That may be due the RAM board, though - don't have a HAdes, but I know with
some PCs require identical-size SIMMs in all slots.

Rich, where in the U.S is it that I can not purchase
Playboy? I sure as hell don't want to move there:).
This censorship thing is getting to be a big problem
in the U.S, and i'm not just talking about Playboy
stuff. On the news last night, the lady incharge of
the French language usage in France, implied that
the University of Georgia because of their 80% English
pages would be banned from the French domains. Hey,
it dosen't bother me one way or the other about the
language thing, if it's TOS i'll figure it out:).
How did Clinton get elected again? What the hell
is wrong with the American Public? Was it the
illegal aliens that voted for him after he granted
them amnisty with my tax dollar? You know I can get
pretty wound up when someone says something bad about
a Falcon, but when someone starts sticking up for
the political officals that are running the U.S into
the ground and distroying all the natural resources
I really get pissed. I know this dosen't belong here
but I wasn't the one who started the UK-US healthcare
shit in the NG. I better stop before I go call some
800 government numbers to relive my inner fustrations.

Remember, one if by land, two if by sea. This definetely
looks like it's comming by land.

I don't think the BackPack cartridge ever came with a clock. At
least the one I have didn't. But I did put the ROM's into a Magic Sac
cartridge so I had both BackPack and the clock. I was always disappointed
that the Back Pack software wasn't developed further. It was a nice
package at the time.

There was a similar cartridge with a clock called DeskPac from
QMI. I saw it at a few Atari shows many years ago, but I'm not sure if it
ever actually got to production.

The first Link 2's had the same labels as the original Links. If
it has the LED power indicator dotting the i, it's a Link 2.

# 2326. WTB: Mega ST4 or Mega STE4

Is it really too hard to admit that you know absolutely bugger all
about the ST?

You can talk considering your in-ability to cut your quotes, but yeah
it is a bit big but I think this is due to him using a BBS, which
gives a user .sig and a BBS .sig.

jaubrey@jaubrey.demon.co.uk (James Aubrey) wrote:-

>With the recent unfortunate news about Daron Brewood being linked with
>a porno racket on the Net

First of all, Daron has NOT been linked with any 'porn racket on th
Net'.
Secondly, this kind of speculation/reactionary bull shit is the lasr
thing we need, or Daron deserves.

Thirdly, I personally have know Daron for over four years, he visits
my house once a week and rarely a day goes by without a phone conversation,
and I KNOW Daron is not invovled in any kind of racket. Of course this kind
of close association with Daron will make me a ring member in the 'porn
racket on the Net'.
Be vary careful before you make statements like this, unless someone
changed the law, Daron is innocent until proven guilty. Such comments could
be considered libelous.

>I have a few questions to ask concerning how the law stands. Is it illegal
>to download porn, keep it on your system, or upload it(from an external
>source) to say, your web page? I've only a few times come across pics I'd
>rather wouldn't have, and have deleted them from my system straight away.
>IMHO they weren't any worst than pics you would find in a mag, on the top
>shelf. Are there any other points to be aware of regarding this matter...?

Storing of 'porn' in any electronic or magnetic format is illegal under
various UK laws. Of course you must first define 'porn', this is where the
law becomes vague.

>It was also said that Demon had been monitoring him for 2 years, are ISPs
>allowed to do this?

The are acceptable use policies with all ISPs, Demon included, they are
entitled to monitor anything that passes through their system, remeber the
same laws that govern you also apply to them.

FACTS, that is what you are seeking here, but before you ask other
people to supply facts, get yours RIGHT.

Hayes and other companies are now selling external ISDN 'modems' that
connect to you machine in the same way as a standard modem and then connect
to an ISDN line.
To connect via ISDN you still have to dial a telephone number, so and
comms program that can deal with the system at the other end should work
with ISDN.

RT>
RT> Good Grief!

That's not what the post said. It said DARON (not NeST) is being investigated,
and NeST is down, not because it's being linked to pornography, but because
Daron's system has been confiscated because HE is being linked to pornography.
You seem to have read way too much between the lines.

# 2334. Re: Ant Mail doesn't change to editor's path

Newsgroup: comp.sys.atari.st
Date: 1997-02-03 00:00:00 UTC
From: Michael Clemmetsen <michael.clemmetsen@sunderland.ac.uk.spam-me-not>
Message-ID: <01bc11da$c720f5a0$80dfe49d@m_clemmetsen_pc.ac.uk>
Source record: 128523

I have found that putting a copy of a resource file in the root of your boot drive sometimes solves problems like this. If you use QED as an editor, you can now set a QED environment variable which gets round such problems.

Michael

Alan Forster <a.forster@clear.net.nz> wrote in article <5cgumq$nrq@fep4.clear.net.nz>...
:
: I have recently been trying to set up Ant Mail, and while it works
: fine other respects, it does not seem to change to the path of the
: editor at the right time, meaning that the editor is unable to find
: its resource file.
:
: Is there any way to avoid this problem? Any help would be appreciated.

## 2335. Re: tos image

: >
: >TOS is what makes the ST GO.If you restrict distribution you force
: >programmers to programme for TOS 1.0!

: Please explain what forces me, with TOS 2.06 and 3.06, to program for TOS
: 1.0 - so far, I haven't written anythign that won't run on TOS 1.0, but I
: also included hooks to check which version of TOS I am running under, and
: use the "new" features if they are available.

It's more a matter of older porgrammes not working with newer TOSes.
There are many games which work with TOS 1.0 that break with newer TOSes.

: Only an incompetent is restricted to TOS 1.0 programming; or someone who
: didn't bother to (a) upgrade his TOS or (b) register as an Atari developer.
: In fact, while he would not be able to test the results, it is perfectly
: possible for a programmer using TOS 1.0 (or even 0.98!) to write software
: that takes advantage of later versions. And there's hardly a lack of people
: willing to test such software - look at the traffic in here.

It would be easier if TOs were on disk so that you could switch between
TOS 1 and 3.The point is that since it can only be (legaly) on ROM,it's
time consuming to switch between versions.

: Oh, is it? So you're telling me that the dialog which shows up from the
: 'Desk' menu doesn't claim that TOS is (c) Atari Corp.?

Just because it's copyrighted doesn't mean that Atari couldn't let it be
distributed freely.

: > TOS is what makes the ST GO.If you restrict distribution you force
: > programmers to programme for TOS 1.0! Rather than that,they'll probably
: > just make it so it won't work with old STs or they'll violate the OS
: > like everybody does on the PC.

: So by your argument, MSDOS isn't copyrighted to Microsoft, since it's
: what makes the PC 'go'? What the hell makes you think programmers would
: program for TOS 1.0? TOS upgrades were always freely available from
: Atari dealers, in chip form. That's not 'restricting distribution', is
: it?

Yeah but since it's on disk,you can just boot up a new version.
Plus it's easier to copy!(copyright or not)
In school we used to copy the latest version of ProDOS all the time.
No one gave it a second thought.Or a first thought for that matter.
Since it came with the computer anyway.

: > Look at the Atari,DOS usually came on a game disk (depends on the
: > game),and always with a new disk drive. And while the OS was in ROM,it
: > was a cartridge that could easily be swapped out.

: What the hell has that to do with the issue of copyright? Absolutely
: nothing.

Well,nothing.The point is that it was distributed all over the place.
Of course DOS was copyrighted,but that didn't seem to stop game designers
from including it.(Atari was probably happy that they were suporting DOS
rather than bypassing it)

: > I assume that TOS is re-locatable,so I assume you can load other TOSes
: > even on a machine with TOS built-in.(but it's kinda huge) Isn't there a

: Ah... the keyword - assume. Do you have any experience of the ST series,
: or are you basing your 'this of course is utter rubbish' comments on
: experience of the 8-bit machines?

uh,the Atari OS was not re-locatable.

If TOS isn't relocatable,then how do you boot off of disk.Do you have to
replace your TOS chips with RAM chips?!?

: None of this has anything to do with my reply - which was that TOS is
: (c) Atari. It is. Period. People copy it, create images, run emulators
: and lots of things - but it's still copyrighted.

Of course the OS has always been stored in ROM from the beginning.It's
just that it never changed that much.And most all computers put RAM under
the ROM so that you could use a RAM OS.
On the Apple and Atari,you could load the old OS if you needed to.
(on the Apple,BASIC was part of the OS ROMs)
I dun't know if the Commodore OS ever changed.
(but it had RAM under the "kernal ROM" just in case)

oxo@imaginet.fr (Zork) said:-

>The PPP layer for WebSpace arrives: PPP link.
>You can take a look at the snapshots of the preview
>at the following adress:

Will there be an online demo version of webspace.. ?
I for one would like to have a play with it online before I even think
about spending money on it.. a demo version without the online
capability is like a demo of a hard disk defragment program which
doesn't let you defragment your hard drive imho..

Nick.

: I gathered that from the rest of his posting, which is weird considering
: we're in comp.sys.atari.st rather than .8bit ;)

The point is that Atari shouldn't restrict the OS&DOS.
Obviously the ST just threw away the Atari technology rather than building
on it.(The Amiga almost seems like a sequel to the Atari)

Just look at the similarity of the 2600 to the Atari.

Uhhmmmm... Pinhead has nothing whatsoever to do with how much RAM your ST has - all it does is speed up program loading, by eliminating the "let's test all the RAM when we run so we'll know what's available" function (for the moment, I'm drawing a blank on what that's called "officially").

If your ST starts up with no RAM, you have either far too many AUTO folder programs and desk accessories (and you can't have more than 6 of those active no matter how hard you try under normal TOS), or you have a hardware problem.

: > that TOS was some big model of perfection...Far from it.

Well,if you're going to buy everything new!
I always buy used from thrift shoppes and flea markets.

: No... but it's nicer than Windoze any day of the week. What you don't
: seem to understand is that all the extra functionality that you see in
: Windows is written into each an every application. For example, OLE.
: This is not some complex OS feature, but a standard communications
: interface implemented in many major programs.

Are you sure that it's not built into DLL files rather than the programme
files themselves?

I thought that OLE was a file format,not inter-process comunication.

: Also, Windows is a *PIG* to program, mostly due to the
fact
that, : unlike TOS (which seems to be unique in this respect), there's no
: systematic function naming (e.g. in GEMDOS, all file functions start
: with an "F", and all memory functions with an "M"). Under Windows,

: it's pot luck whether you even find the damn function you were looking
: for.

uh,that's really a matter of what programming language you use.The
functions aren't really named anything.

As for "file functions",Windows doesn't have any.That's what DOS is for.

: > In my opinion, the Jaguar was a hastily produced, crappy fragile
: > machine that was once again marketed half-assed with games that looked
: > like 2nd generation Genesis and SNES titles... Pretty sad for a
: > so-called 64-bit machine.. And here's a correction... The Jaguar was
: > one 32-bit and 2 16-bit Symettric multi-processors. There is nothing
: > 64-bit about the jaguar at all. Except if you add the processors's
: > together, which is one big cop-out.

: You're right, the Jaguar was hastily produced, and some of the games
: were rather... well, SNES-like... However, it *was* a 64-bit machine.
: The Jaguar has one MC68000 (16/32-bit), four 64-bit RISC processors,
: three of which are more or less completely dedicated to graphics, but
: could probably be used for processing as well, and one 32-bit RISC
: DSP chip to handle the sound subsystem.

: The 68000, contrary to popular belief (proliferated by the rather
: anti-Atari console press) is only actually used to process I/O, such
: as the joypad, and for "housekeeping tasks" - I assume this includes
: little things such as clocks.

I never did get a Jaguar!
And I have many,many different game systems and computers.

: > The only hope for Atari is that they don't lose even more money, or
: > for humanity's sake, the Tramiel's going into business again... I'd
: > certainly hate to see market share for another company jump from
: > thriving to downright pathetic. Monkey's could have managed Atari
: > better. BILL GATES could have managed Atari better...

: No - this is unfair. Bill Gates could probably have managed Atari
: better, but Atari was failing anyway; the major problem that they
: had was that the press were largely against them, resulting in the
: entirely juvenile behaviour of a large portion of their potential
: market (the "Oh - it's an Atari - well, it must be cr*p then"
: syndrome). Monkies, however, could not have managed it better. The

Why did the press hate Atari?

: Tramiels have actually done quite a good job; although you probably
: don't realise it, the Atari 2600 games system was the most popular
: console ever.

I concur!

h > assembler. Would anyone recomend a good bood on 68k
h > programming in assember or 68030 in assembler? A book that is
h > still in print specific to the Atari would be nice but not
h > required.

You will need at least 2 books: one on 68K assembler (such as 68030
Assembly Language Reference by Steve Williams, Addison-Wesley. 1989)
and one (or more) on programming the Atari (such as The Atari
Compendium by Scott Sanders, SDS Publishing, 1993). The Abacus
series (especially Tricks & Tips) would be useful for examples.

Message-ID: <32F62C6D.446B9B3D@fir.fbc.com>
Source record: 128544

Actually Rob,

In a sense I am jumping ship on TOS and moving, yes the Mega STe sold super quick, I'm STILL getting mail and I wish I could delete that post. The reason I want a TT030 is that I am in touch with an old Atari programmer who work on the TT030 Unix team, he's sending me a finished copy of Atari Unix System V which is what the TT030 was originally designed to be used for, but I'll have dual HD's, one for Unix, one for TOS :)

Curt

In article <5d2m2n$cqo@login.freenet.columbus.oh.us>,
dklugh@freenet.columbus.oh.us (Daniel Klugh) wrote:
>Since the ST doesn't have a text mode,8 times as much data has to be moved
>than on a regular computer.

Actually, since a character is composed of either an 8x8 or 8x16 pixel matrix (in standard ST resolutions), the amount of data that must be "moved" is 64 times or 128 times one byte per character. However, that's misleading. In a PC with a text-based graphics display, the video adapter still has to generate that pixel matrix - it just does it internally. Keeping the data flow between the CPU and the video card low is very important in an 8086-based system, because you have only an 8 bit, 4.77 MHz bus for moving data between the CPU and the card. In the ST, you have a 16-bit, 8 MHz bus - almost 4 times as fast. Considering other overhead issues, the ST can actually be more than 4 times faster for some operations.

>And that assumes some text editor or other text programme.
>A term programme that has colour will have to move 32(!) times as much
>data as opossed to a regular computer.
>(this assumes that the ST uses planar graphics)

That's another incorrect assumption. The ST uses bit-mapped graphics.

>And the ST has a "BIOS" as well.

Well, gee, you know, any computer that DOESN'T have a BIOS doesn't have in/out capability - which makes it pretty useless for general-purpose computing.

Followups set - again.

Laws regarding depictions of the naked human form vary from place to place,
James. In parts of the US, it's illegal to sell Playboy. In other parts,
it's illegal NOT to sell it (censorship being cited). I suppose the UK has
its own share of wierd laws regarding sex and images of it.

>I've only a few times come across pics I'd rather wouldn't have, and

In the US, they are allowed to do it BUT if they reveal any information so
garnered to a third party (including law enforcement officials) without a
court order, they are violating a great number of laws. Again, the UK has
its own strange rules. I don't know what they are, but odds are good that
they are unique to your island nation.

>
>Call me crazy,but text mode would probably be ideal for a TEXT editor.

OK, you're crazy. <G>

Seriously, the only time a plain-text editor would be useful for most people
is when editing batch files and config files; when writing letters it
usually is preferable to have a graphical display of boldface, italics,
underlines, and so on - which isn't possible using the IBM PC-style text
interface, without adding needless bloat to the application itself. For an
example of how to implement a word processor with the ability to
differentiate all the various text effects in a DOS-type application, see
Word Perfect for DOS - but don't complain to me when you can't remember what
blue text on a red field means.

>: I have no idea what you're attempting to say by "trying to be like
>MS-DOS." You may be referring to the file system - which was based on CP/M,
>the only

>Not really.CP/M kept the FAT for a file in it's directory entry.Since

Really. DR-DOS and MS-DOS both based their file system on CP/M - it wasn't
identical, for the reasons you outlined, but the general overview /is/
similar - which is why the 8.3 naming convention was perpetuated.

>: real "standard" there was when both IBM and Atari were selecting an
>: operating system.
>
>Are you talking about OSes or DOSes?!?

Do you know what "DOS" means?

>MS-DOS has nothing to do with CP/M.(besides having similar system
> calls,they're totaly incompatible.CP/M runs on a 8080,MS-DOS on a 8086)

Well, that's a rather awful mixture of facts and disinformation.

The type of chip that an OS runs on doesn't have much bearing on the OS architecture (although it obviously does affect which compiler you'd want to use).

The file /system/ used by CP/M, CP/M-86, MS-DOS, PC-DOS, DR-DOS, and TOS are all similar - note I did NOT say identical, just similar - for the very simple reason that, at the time all 5 of the latter were being developed, CP/M was the ONLY cross-platform OS (and file system) available - it ran on Kaypro and other brands of computer, whereas most "personal computers" of the time came with an OS that was custom designed for the computer maker, and totally incompatible with all other operating systems and file systems. In order to maintain some sort of continuity AND make it simpler for end-users to move up to the new computers, MS-DOS and its cousins retained much of the command structure and a lot of the file system used in CP/M.

>: Probably more by luck than any other way, TOS and MS-DOS
>
>Since MS-DOS is the only OS of it's kind,TOS obviously ripped it's DOS and

Really? Strange that Digital Research never knew their DR-DOS was completely different to MS-DOS, nor that IBM never realized that PC-DOS was different. Both DR and IBM advertised their OSes as compatible with MS-DOS. And at least one of the Gateway boxes I have in the lab uses PC-DOS at this very moment - and runs standard MS-DOS-compatible software.

>system call interfacing style off of MS-DOS.
>TOS's system calls are obviously set-up to look like MS-DOS ones just as
>MS-DOS's original system calls were made to be analogues of CP/M-80's.

But wait, you already said that MS-DOS is completely different than CP/M.

>(CP/M-86 came out long after MS-DOS was first created)

As it happens, I don't feel like looking this up, but the time frame was definitely contemporaneous. I was there.

>And the DOS ("file system") could only have been stolen from MS-DOS.
>No other computer (PC) would use such a useless DOS.

And you'll, of course, insist that this isn't an advocacy issue...

>: for many Atari users. IF you don't happen to like it, that's fine -
>: everyone is entitled to an opinion.
>
>But not to falsehoods!

Indeed. There's a significant difference between opinions and facts. I suspect you and Peter Sinclair-Day could have a wonderful conversation. I hope you have it in some other newsgroup.

>: But this is appraently an advocacy issue, so I have set followups.
>
>I wish you'd stop doing that.

Then stop moving this advocacy issue to the main discussion group.

Followups set.

>Since you need TOS 1 to run games.I doubt that I7ll upgrade the ROMs.

Buuuzzzzz! Wrong! There are about 3 or 4 games that simply won't run on later version of TOS. And, since you can easily use a switchable TOS stack, and restore TOS 1.0 if you ever need it, there's no good reason other than money to NOT upgrade (although, if the only reason you have an ST is to play games, there's no reason to upgrade at all).

>I'd more likely get a later TOS on disk than ROM,but that's supossed to be

>(you can get a 80x25 CLI window on the Amiga with a simple ANSI sequence)

It's quite easy to get a fullscreen display in GEM as well - if the programmer thought there was a need for it. Since I get 25 lines with 80 columns in a window, with a menu bar and a status bar, and a little bit of desktop showing around the window, I don't see what the problem is, but a few of the program I have written do take over the full screen (it's easier than adding window gadgets and so on, and if I just want a program to do something soon, that's more important than making it pretty).

>displaying posts and I'm a week behind here. Now, anybody know how
>to issue a cancel for Pine messages? Looks like eXclude, but docs
>are pretty thin.

copy the message-ID into the Subject line after the following words:

cmsg cancel

Add a Control: header and put "cancel" on that line followed by the
message-ID

make sure the newsgroups: header contains control and at least one of the
newsgroups where the original message was posted.

You can leave the body blank, or put some comment about why you're
cancelling.

So, your header should now look something like:

From: harry@the.bat.com
Newsgroups: control,alt.binaries.atari.d
Subject: cmsg cancel <Pine.SGI.3.93.970201020505.15363C-100000@freenet.npiec.on.ca>
Control: cancel <Pine.SGI.3.93.970201020505.15363C-100000@freenet.npiec.on.ca>
---------------------------------(body seperator)---------------------------------
Ooops! I didn't mean to say that!

You have to edit your .pinerc file to add a control header, BTW.

You probably forgot this, but you will have removed a small jumper from
the Falcon's internal expansion port when you fitted the FalconSpeed
board. Without the jumper, the Falcon won't boot. Unfortunately I don't
have my Falcon handy so I can't tell you which pins need the jumper -
but I'm sure someone else in here will do such a thing ;)

Anyone fancy popping their Falcon's lid to help Thomas? or for that
matter, anyone who has an Expose digitiser can look it up in the manual.

Not to knock FoReM (Ricky Moose was always one of may favorite people!), but it should be noted that FoReM is long out of support, that fnet is shrinking daily, and that adding Fido capability (or Internet capability, for that matter) is going to be nearly impossible, with the author of FIFO out of the Atari scene.

I'm not sure about that.
It may be a legal requirement for you to _own_ the ROM's, onve owned
could you not then use the TOS image from those ROM's?

They've never answered mine - including quite a few where I asked them to remove an image of mine from their older web pages as they used it without permission :/

A Barracuda or Afterburner? Barracuda has been promised in two weeks for
four years now. About two years ago, Wizztronics announced it was scrapping
the Barracuda in favour of hawk, an 030 card which has been in final beta
for two years now.

If you know somebody with a Barracuda, then perhaps you should ask him
for information on it and share this info with all of us. I am sure
many would be interested in hearing about it.

All the best,
Chris @ Computer Direct

AFAIK, it's illegal under the Obscene Publications Act in the UK to have any pornographic material in your possession, no matter how it's stored. The illegality obviously doesn't include topless or nude photos, and begins with anything depicting the sexual act.

> have deleted them from my system straight away. IMHO they weren't any
> worst than pics you would find in a mag, on the top shelf. Are there

If you're talking about the sort of nudes you see in mags like Playboy or lower-end junk like Razzle, then you should be OK.

> any other points to be aware of regarding this matter...? It was also
> said that Demon had been monitoring him for 2 years, are ISPs allowed

I'd take that with a pinch of salt. Demon have always made a stand against Internet censorship, and I doubt they would do so without a High Court order. I also can't believe that the UK Police would monitor an individual's internet access for such a long period of time, either.

ATB, Frank.

>subsystems?

From what I gather, the SCSI host adapter attached to the ACSI port needs to
have one of the 8 (0-7 ?) allowable SCSI IDs. The Link uses the ID of 6. A
chain of SCSI devices can be attached to the Link and all the I/O to these
devices goes through ID 6 which the system handles. None of the other main
SCSI devices (those attached to the external SCSI port) can use the ID of 6.

Thanks for the mention of the URL. However, people in the
comp.emulators.misc group are asking about it, since Darek's place doesn't
have the file that the swipnet place has. You have to run it, get the .vhd
files, then go from there. At least some of us don't have Win95. I don't.
Not all of us want to download a large file to get to the virtuals.

: I just received an e-mail from Darek Mihocka that he would be posting
: complete instructions soon

Right, but how soon is soon? We've all already figured this out, way
before he even decides to post it. Heck, I could even go so far as to
write a FAQ file telling how to install it and send it to him. Then
depending on his mood of the day, he'll either blast me for doing that or
say thank you.

What the heck... I'll go ahead and write it. I've already started doing
it, anyway. Any takers for me to post it? As we all know, it's going to be
a work in progress.

The civill libertarian in me gets quite annoyed at all the hue & cry.
Here in Canada a fellow was busted for possession of porn (apparently he
was into 13 year old males) when the cops raided his hard drive and
found the images he downloaded. He was using a text-based LYNX/PINE/TIN
server via a freeNet. He would therefore have had to downlosd the files
and view them off-line.

Had he been surfing with a pentium or whatever, presumably he might have
been able to indulge in his kink by just browsing the images online. The
legal complications occur when you download the images and save them.

: >> GDOS than 1.1 and is it any better?
:

I highly suggest you get NVDI rather than GDOS...
NVDI will allow you to use standard True Type, Post Script, Speedo, and
of course GDOS fonts. NVDI also greatly speeds up your Atari's screen
drawing, and will give you a host of more "up-to-date" printer drivers...
Even Color! NVDI also supports font caching (user choice on cache
size)...which means you don't have to wait for your fonts to load over and
over again to get a page printed out.

Speedo is good for a second look...it's a great GDOS supporting all the
same fonts as NVDI. Speedo doesn't speed up your screen however...but
it's a great GDOS that's easy and powerful to use.

Brian

Hi,

The Gemulator is available from http://www.emulators.com
There are two versions available at present. Gemulator 96 for
Windows 95, and Gemulator Classic for DOS Whicj has now been released
as Freeware. Both these programs will allow you to Emulae an Atari
on Your PC. Neither of the Emulators provide an operating system,
so you will need to get hold of an image file of either TOS 2.06,
or MagiC

Yours,

Ben Hills.

skr@dcs.ed.ac.uk (Steven Rodgers) writes:

> Does anybody know what's going on with Bad Mood at the moment?

At the moment, not much.

> Will there be a new release ?

It will. The problem is that noone (Doug Little especially) hasn't
got any time to do anything on it. The project is not dead, it's
just running on the backburner right now. The "problem" is that
Bad Mood is a freeware project with free sources for anyone to
modify and use and therefor the developing speed isn't as high
as we would want it to.

The only program that is currently developed right now is GEM-DEU, the
great and magnificent WAD editor (currently it's sort of on the back
burner as well though ;-)).

If someone wants to help out the sources are freely available and
help is very much apreciated.

>Minix didn't like it one bit but is there a work around.

Yea, MinixFS uses a different (read better) way of storing the long
filenames. However, Magic supports the VFAT (Win95) filenames, so
you might be able to use this to read the CD... not sure though...

# 2417. Lacescan (Overscan) upgrade.

Newsgroup: comp.sys.atari.st
Date: 1997-02-03 00:00:00 UTC
From: ceebti@cee.hw.ac.uk
Message-ID: <E514Ks.218@cee.hw.ac.uk>
Source record: 128664
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Hi All!.

I'm just about to install an overscan board into my STFM (The Autoswitch lacescan version). The circuit I can make without any problem (its just one quad d-type flip flop IC and one triple 3 input nand gate). However, the connection details that are included in the file 'overscan.zoo' are only for revision 7. motherboard STs.

I have not opened my machine up yet, but it would be helpfull if anyone can give details of the glue chip (I.E. serial number/pinout etc, so that I can find the DisplayEnable signal for the overscan board.)

Thanks in advance,

Brian.

# 2419. HELP! Falcon speed problem

Newsgroup: comp.sys.atari.st
Date: 1997-02-03 00:00:00 UTC
From: "Thomas R. Mccartney" <tmccartn@freenet.calgary.ab.ca>
Message-ID: <Pine.A32.3.93.970203083457.2118A-100000@srv1.freenet.calgary.ab.ca>
Source record: 128666

I have a falcon speed board which right now is safetly nestled inside my Falcon. The problem is that I have sold the board and I I must remove it from my machine. When I do the Falcon stops working. The symptoms are simple when the board is in the Falcon boots normaly, when the board is out the poer comes on the fan and internal drive spin up , but the atari logo does not appear and no memory test is performed; in short, the falcon is dead as a doornail. have repeated this test several times.

I wonder if something in the NVRAM is at fault - looking for the falcon speed and not fondong it it locks the system or perhaps there is a fault in on of the precessor direct pins? The Falcon worked fine BEFORE the bopard was originally installed (but that was almost four years ago).

Model: ATARI Falcon 030 TOS 4.04, with an internal 85 MB HD.

Any suggestions or comments would be gratefully accepted.

Tom McCartney

Oppsss.. I should never have said that. :-)

It looks like Doug has released a new version, 2.16. It now supports Nova
graphics cards and some bugfixes. I guess it's the first game on the
falcon to make use of the Nova cards. :-)

It looks like the sources are there as well.

If someone is interrested in getting the latest version and sources
point your browser at:

http://ourworld.compuserve.com/homepages/dmlittle/

You will also find some stuff on Apex 3 and the latest versions of POV 3.

# 2422. MiNT Multiuser Setup.

Newsgroup: comp.sys.atari.st
Date: 1997-02-03 00:00:00 UTC
From: Ben Hills <ben@imperial.co.uk>
Message-ID: <32F65899.17A9@imperial.co.uk>
Source record: 128669

Hi All,

I have recently installed MiNT 1.12h, MiNTOS 1.4.1 and MiNTNet on
my Atari Falcon030. I have an Atari 1040STE running Connect and
hanging off the MIDI Ports, and a rather old P.C. Running a VT100
Terminal emulator, which is hanging off the Serial Port. This runs
great. The problem I am having is with TCP/IP. I have MiNTNet running
on the Falcon, and STE but I do not seem to be able to establish a
TCP/IP Link between the Falcon and STE, on neither the MiDI, or Serial
Ports. I iwsh to be able to Telnet, Rlogin etc, from my STE to
my Falcon. I think I have all the correct files in /etc, but every
time I try to telnet, I receive an error message:

100.0.0.1 homer
Network is unreachable.

Can anyone help?

Thanks,

Ben Hills.
ben@imperial.co.uk

Believe it or not, Windows was originally written in Pascal. And up until Windows 3.11 for Workgroups PASCAL was still in the source code. In Win95 tho there is no more PASCAL language. Just support for it's data structures for older programs.

Will

Source record: 128454

The Hard drive port on the back is Atari's proprietary DMA 19-pin port.
You can plug in a SCSI drive if you have a good 3rd party translation
device. ICD's "THE LINK 2" is the best, while there are other ICD
adapters, plus one or 2 competing products from SUPRA.

If there is only 1 meg in it you are just about SOL. Most of the good
stuff for the Atari ST requires 2 megs & a high resolution (640 x 400)
monitor like Atari's SM 124. The computer itself will take 30-pin 1meg
SIMMS but only if it is a model 1040STe. The 1040 STf/STfm and earlier
vanilla 1040's all need a hard-to-find hardware add-on to upgrade the RAM.

I meg machines will run a nifty data base as an accessory: CardFile 1.1.
It is shareware. Downlod it from the umich archive or wherever.

If there is a users group, contact them.

From: bjr@edison.ebicom.net
Message-ID: <5d6obs$mm0@einstein.ebicom.net>
Source record: 128456

Aloha,
Looking to get a thread started about audio players for TOS machines. Here are some thoughts/questions to discuss.

For starters...is there a good sample player that can handle all of the popular formats? WAV, AU, MP3, AIF, SND, AVR, etc...
Hopefuly one that can support Falcon DSP and plug on sample clocks (for 44.1khz without coverting), and plug into CAB?
If no single program...can we run down a list of players that would complement one another well?

How about Real Audio?
I've heard that source is not avilable for a Real Audio Player...but that kits are avilable describing the sound file formats and how they work. Might someone be working on a Real Audio player for TOS?

Lets hear what you know here please...

Brian

hi there.
Edit your file /etc/ttytab
in the line ttye change the off to on.
Connect the ataris with the midi cables.
Run mint+mintos+ mintnet on the falcon and run connect from the ste
, Press a key and the login prompt shoudl be available from connect.
DO not forget to set the port to midi in connect :)
bye

: CP/M, and
: TOS *IS* CP/M. So it's more or less the other way around, MS-DOS tries
: to be
: like TOS (or CP/M at least). :-)

Actually, GEMDOS *is* a MS-DOS clone! Atleast according to Tim Oren, and he should know as he's one of the original GEM-developers. The reason for this is that GEM was originally developed for DOS, and to make the port to the ST easy, GEMDOS is a DOS-clone.

The reason why so many thinks that GEMDOS/TOS is CP/M/based (They have probably never even seen CP/M...) is that the 68k-implementation of AES/VDI was first done on Apple Lisas running CP/M. As soon as the working prototypes of the ST was ready, GEMDOS was implemented and the AES/VDI/development was continued on that platform.

>what features set them apart?

We use Octopus on our local user group BBS, and, IMHO, it is one of the
best.

Virtually every aspect of Octopus can be changed to suit you - almost the
whole BBS is run from a script, so basically you just write the BBS how you
like it. Of course Octopus supports Z-Modem, multiple lines, multitasking,
external "door" programs, ANSI, VT52 etc. One excellent feature is
automatic support for CD-ROMs - each time you start up Octopus it
automatically detects what CD is in each CD-ROM drive and sets itself up
for it! Best of all, Octopus is still supported and being developed. There
is a WWW page for Octopus, but I don't remember the URL.

Other current BBS software: Ratsoft, QBBS. I cannot comment on these,
although they are supposed to be very good too.

Just plug them all in, and make sure you never write to the same partition
with both computers. If you do, you'll severely mess it up.

You probably also want to make the two computers boot off different drives.

I've regularly used the above setup with both HDDriver and AHDI.

You'll just have to use RTF format. It should work without any problems,
and it's easily done.

>I can only view this with animated gifs turned off! Otherwise the dreaded
>2 bombs appear and back to the desktop! Annoying thing is, it's a friends

Ditto, It seems the two mug shots on the home page are outside their boxes;
Using cab.ovl v1.18 with animation on, the wizard loads OK, but the other
animation jif's don't ;) No bombs, though.
Using cab.ovl v1.21, it did bomb(3).

On 3 Feb 1997, MICHAEL ROBILLARD wrote:

>Here are a couple of sites I'm having trouble with
>1. http://customhouse.com
>2. http://www.telegames.com
>CAB will exit and two bombs will de displayed when I try to visits these
>sites.Any ideas what's wrong.

Site 1) Using cab.ovl v1.18 all I get is a blank page. If it is a viable
site, it could be using Netscape cookies which CAB doesn't support.

Site 2) Using cab.ovl v1.18 the home page and links displayed OK. However,
ovl v1.21 would not resolve the links. Homepage OK. No bombs...

I'm using 14meg Falcon with CAB1.5_030/STiK1.12 various ovl's.
It might be interesting if people using CAB/MiNTNet get different results.

# 2446. Nemesis/Blitter/RamDisk

Newsgroup: comp.sys.atari.st
Date: 1997-02-04 00:00:00 UTC
From: csilver@kendaco.telebyte.com.no.bulk.mail.us
Message-ID: <5d78h5$v8r@news.telebyte.net>
Source record: 128468

Hi All,

I'm seriously considering the Nemesis board for my Falcon once it is available here in the USA. However, I'm curious as to how it would affect my usage of a RamDisk because of a post by Thomas Binder.

>> P.S. HOWFAST says my RamDisk reads at 2200 kb/sec, what does this say about the
>> the DMA limit?

Thomas replied:

>Nothing. A Ramdisk does not use DMA, it uses the CPU to access the RAM
>(unless it uses the BLiTTER) and no DMA chip.

As the upgrade disables the Blitter chip, yet speeds up the CPU, does anyone with the Nemesis or other accelerator board installed use a RamDisk and HOWFAST is it? I currently use MDisk at the above read rate.

Charles

P.S. If anyone would develop a cart for the Falcon as a battery backup RamDisk with say 32+meg of plugin simm's, I'd buy :) Even a schematic for a home built would be great. I know, cart ports are read only, but...

With Ratsoft you just use xtendos and the cdroms just become another
partition so to speak...all you do is just tell ratsoft where to find
such and such a file or group of files. It automatically searches for
any file_id.diz files and places them in the file descriptions...
easy as you please!

Sorry to hack your post, but I have the same question between a Falcon and a PC (Sorry). My falcon is a standard one, the PC side scsi card is an adaptec 1522 ISA ... I would Like to do something like :

```
| PC |_| ZIP Iomega (Id5) |_| HD (Id2) |_| HD (Id3) |_| Falcon |
```

The falcon boot on the internal IDE hard drive !

Is this feasible ! What is the falcon side scsi id ! (7 ?) Should I change something on the adaptec card (controller ID set to 6 for example)

If somebody has any experience ! Please tell me ! I don't want to kill my scsi card, my zip and my two 640 MB hard disks, neither my falcon scsi bus !

I will use HDDRIVER to do this on the falcon side ! Because it allows me to access PC formatted partitions (for info;) I wait for it, does Hddriver will allow to do this !

## 2453. CD-Player...

Newsgroup: comp.sys.atari.st
Date: 1997-02-04 00:00:00 UTC
From: thechyld@harold.eastky.com
Message-ID: <855048482_OASIS_@harold.eastky.com>
Source record: 128475

Can anyone list the CD-ROM players (Toshiba, etc,) that will work with Alexander Clauss's (sp?) CD-Player? I'm using a Pioneer 6-pack changer (double-speed) and it will start to record the current selection to disk but then always stops after about 10 or 15 seconds... (and its not hard drive space-I've got an 810 megger) Thanks! :)

# 2454. Mega ST2 memory upgrade

Newsgroup: comp.sys.atari.st
Date: 1997-02-04 00:00:00 UTC
From: "O.R.Williams" <owilliam@astro.estec.esa.nl>
Message-ID: <32F74EAC.38F7@astro.estec.esa.nl>
Source record: 128476

Is it possible to upgrade a Mega ST2 to four megabytes RAM? If so do
I need a kit for this and what is it called. Please don't just point me
in the direction of Toad Computers because it is a little too far from
teh Netherlands.

Thanks

Rees

# 2455. Atari internet software

Newsgroup: comp.sys.atari.st
Date: 1997-02-04 00:00:00 UTC
From: Paul Lantz <plantz@onlink.net>
Message-ID: <01bc1298$d74ce100$e95b65cc@paul.onlink.net>
Source record: 128477

My office is phasing out another Atari computer. I could probably get a MegaSTE with a mono monitor pretty cheaply.
I want a computer for my cottage, mainly for WP and internet access.
1. What kind of internet software is best for an Atari? At the minimum need email. Web browser would be nice also.
2. Any problems with MegaSTE and 14.4 or 28.8 modems?

I sold my last Atari computer, a MegaST that I bought in 87, a few years ago but the MegaSTE looks good, especially if I can get it for a nominal price.

Thanks for your thoughts and comments.

## 2456. Re: cartridge drive?

OK, let's try and get this straight once and for all.

Daniel Klugh wrote:

> Since MS-DOS is the only OS of it's kind,TOS obviously ripped it's DOS and
> system call interfacing style off of MS-DOS.
When IBM went to MS to write an OS for their new PC, MS had no experience of writing an OS and very little time. They bought a CP/M based system called QDOS from Seattle Computers and used that as the basis for MS-DOS. It is not a coincidence that MS-DOS and CP/M are so similar. MS-DOS is not and never was original.

> TOS's system calls are obviously set-up to look like MS-DOS ones just as
> MS-DOS's original system calls were made to be analogues of CP/M-80's.
> (CP/M-86 came out long after MS-DOS was first created)
> And the DOS ("file system") could only have been stolen from MS-DOS.
> No other computer (PC) would use such a useless DOS.

It is a matter of record that GEM was originally created for the PC and therefore would use a compatible file system. Atari used GEM because it already existed and was therefore cheaper and quicker than creating a new OS from scratch. Allegedly the file system in TOS is based on MS-DOS 3. However, since MS-DOS is based on QDOS, which in turn is based on CP/M, created by Digital Research, the originators of GEM, there is a kind of natural justice there. TOS's file system is NOT original (nobody ever claimed it was) but then neither is MS-DOS's (and that they do claim.)

Regards
Martyn

Well...my absolute favorite is lps124.I don't remember where I got
it(umich??) but it's
great!It plays direct from disk with good quality,even on my ST(not
E).I'm sure it supports
WAV,AVR,AU,signed or not etc.I don't know if it works on Falcons,but for
ST's with a hard
drive,it's great!

I'd guess there may be jumpers to tell what size simm boards you are
using and these need to be set - There is usually just one or two
sets of jumpers per board but sometimes they have rules that allow
mixing and matching of pairs of different sized simms - depends on
how flexibly they built it - or as someone else said, maybe every slot
has to be filled with the same size simms. Wayne Booth

No problem - with a SLIP connection, you can use STiK as your dailer, and AntMail, Newsie, Crystal Atari Browser, MG-ftp, AtarIRC and some other little goodies (I especially like FORECAST even though it has a few minor bugs). With PPP, you can use MiNTnet and GlueSTiK for all of the above, or NOS and Oasis (version 1.35 is quite stable and reliable) for mail, news, ftp, and telnet (which permits the use of lynx to browse the Web in text-only mode).

>2. Any problems with MegaSTE and 14.4 or 28.8 modems?

None. You'll want HSmodem7, set for M1EMU, in order to use Modem2 at 57600 or faster.

>I sold my last Atari computer, a MegaST that I bought in 87, a few years
>ago but the MegaSTE looks good, especially if I can get it for a nominal

Do it! The high-rez monitor makes for good Web browsing, too.

I've been using N_Player of late - it runs as either an accessory or an app,
and supports several formats. Others that work well are SWAV an LPS; 525
will convert most formats also. WAVplay2 is excellent for 8-bit mono waves.

>If no single program...can we run down a list of players that would
>complement one another well?

Hmm, I think I just did that.

>How about Real Audio?
>I've heard that source is not avilable for a Real Audio Player...but

Here's a concept: LPS is designed to play "streaming" audio already (it can
play samples that are larger than memory without pausing, as long as you
have a fast (<15ms access) hard drive). How about a translator that expands
RA format to RIFF WAV Format and then passes the data to LPS?

It's not only possible, it's easy. You need 16 DRAM chips, 1 meg x 1, and
(I think) 3 resistors, about 330 ohms. I would recommend 16 AUGAT sockets
for the DRAMs, but that's up to you. Just solder in the sockets (or DRAMs
if you're brave/foolhardy/cheap), follow the traces from RAS0 and RAS1 and
CAS back towards the MMU chip, and when you find a gap in the trace, that's
where the resistors go. You may need some bypass capacitors, also - I
recommend tantalum, 50Vdc rating minimum, and I can't recall the value, but
look at the existing caps (there should be 8 ro 16 of them next to the
installed RAM) to fingure out what value capacitance you need.

check out garfields pages for Internet software
http://zippy.spods.dcs.kcl.ac.uk/~garfield/
no problems with MegaSTe and 14.4 or 28.8 modems. I advise the use of
HSmodem though(now up to version.7)

Not accurate.

Gemulator96 is an ST/STE/TT emulator
Gemulator 3.6 (a.k.a. Gemulator Classic) is an ST emulator. It will
use TOS images from 1.62+ but won't reliably (according to Darek).

U can get a demo of Gem96 but the current demo has the Atari disk
format read option blocked but can run full screen. The older demo
won't run full screen but will allow the Atari format option. I for
one prefer full screen.

I'm in the process of testing some games.....

>Is there a replacement desktop called noDesk? If so, where might I find a
>copy of it or at least some information?

yes, this desktop exist. I think you can find a demoversion of it at
Berlin. I've use it for a while and I must say it has some very nice
features but AFAIK this desktop isn't supported anymore as the makers
of it, noI Software GmbH doesn't support the Atari platform nowadays.
BTW: noI Software are the designers of Wordplus 5 and Arabesquex 2
too.

> Can anyone reccomend a family tree type of program in which, along with
>text, one can include pictures(ie. of your relatives)? Thanks Mark Friedman

Yes! there is a program called just that; "Family tree".
I can't remember where I downloaded it from, but if you use one of the FTP
search engines available on the net you should try to search for "ftree"
(I believe it was called).
One of my pages has such search engines installed, so unless someone else
tells you exactly where you can find it, try:

http://home.sn.no/~hallvart/pages/atari_ftp.html

Good luck!

# 2481. Gemulator Classic - how may it work??

Newsgroup: comp.sys.atari.st
Date: 1997-02-04 00:00:00 UTC
From: Manfred Vogelgesang <mvogel@coli.uni-sb.de>
Message-ID: <Pine.GSO.3.93.970204223950.15109A-100000@coli-gate>
Source record: 128503

Hi,

I followed the thread about Gemulator Classic and the detailed
instructions in order to make it work with a tos image (2.06).
Nevertheless, pressing the key "g" I only get a white screen and nothing
else happens. After some seconds, the emulator crashes.

So my question is:
Once I enter emulation mode and see the white screen, what do I have to do
in order to start an Atari program??

Many thanks;
it seems that an answer would be interesting for a lot of
people here in this group

Source record: 128506

If you REALLY want to support a company that cares about its Atari customers, patronize B&C Computervisions !!!!!

They have been supporting Atari for over 17 years and they are one of the few places that supports EVERY Atari:

2600
5200
7800
Lynx
Jaguar
400/800
XL
XE
ST
Mega
STe
Mega STe
TT030
Falcon030
STacy
Atari ABC PC-1 to PC-5
Atari ABC Laptops

B&C Computervisions also has an very extensive stock of Atari software and cartridges as well as cables, connectors, accessories, and power supplies. They even have a few rare collectables.

Support B&C Computervisions!!! They've been here for us, be there for them, buy your Atari needs from them.

408 - 986 - 9960

Open Tuesday-Saturday 10am-6pm PST/PDT

## 2485. STiK/DIAL.SCR

Newsgroup: comp.sys.atari.st
Date: 1997-02-04 00:00:00 UTC
From: Dennis McGuire <mcguired@moose.erie.net>
Message-ID: <Pine.LNX.3.95.970204205838.18092B-100000@moose.erie.net>
Source record: 128507

Our ISP has recently added terminal servers which require
responding to a different prompt than entering directly through a shell
account. When you call you may get in directly or you may connect to
one of the servers. Will the STiK DIAL.SCR file support conditional
responses so I can connect whether I get the terminal server or not?

# 2486. CAB/STiK/1040 STe Help

Newsgroup: comp.sys.atari.st
Date: 1997-02-04 00:00:00 UTC
From: Dennis McGuire <mcguired@moose.erie.net>
Message-ID: <Pine.LNX.3.95.970204204957.18092A-100000@moose.erie.net>
Source record: 128508

Three members of our user group are having continuing problems trying to run CAB 1.5 with STiK 1.12 on 4 Meg 1040 STe's, all with TOS 2.06. I'd appreciate replies from anyone successfully running this combination without encoountering bombs regularly. I think a half hour without bombing is our record! Generally we get two or three bombs or a lockup at the "resolving host" prompt. We've had bombs with MG-FTP also.

We are running HSMODEM07 (DRVIN, MFP) and STIK_TSR in the AUTO folder in that order. We're running CAB with images off, which I expect anyone with an 8MHz Atari is doing!

Which versions of CAB.OVL and CAB_JPEG.OVL should we be running? How many bytes are they? Should the DEFAULT.CFG file parameters be changed (MTU, etc.)?

Help!

Dennis McGuire
President
Spectrum Atari Group of Erie

## 2487. Manual SLIP connection with STiK?

Newsgroup: comp.sys.atari.st
Date: 1997-02-04 00:00:00 UTC
From: Dennis McGuire <mcguired@moose.erie.net>
Message-ID: <Pine.LNX.3.95.970204212108.26108A-100000@moose.erie.net>
Source record: 128509

Can a SLIP connection be made manually with STiK? Our ISP offers
a SLIP option from the shell account menu. Obviously the dialing commands
in DIAL.SCR aren't needed. What should be left in or out?

Also, when you try to make a manual connection, it lists the SLIP
parameters as MTU=1006 MRU=1006. Are these critical? Should DIAL.SCR
have the same values?

>doing wrong but it still won't recognize the drive.
>What can possibly be wrong?

Who knows. My version of the demo complained about Drive S of all things and wouldn't install. I tried this because when I upgraded to V6 everything fell over. However, the problem was down to the upgrade disk which seemed to been corrupted. The disk was, eventually, replaced and V6 is fine now. (Falcon030, Seagate IDE, Quantum 130, Syquest ezflyer, & Sony CD all properly recognised)

Now stop that Rich. I run TAF ONLINE on Friends Of Ricky Moose. And as
you know, I can send I-Net E-Mail by using Fidodoor. It's receiving the
messages through Fidodoor that has me beat. While the program is no
longer supported by anyone.... the alternatives are not that easy to set
up. I have never liked the script language of Ratsoft and while Octopus
IS supported, it's a bear to set up. Why can't somebody come up with a
real nice BBS program for the 16/32 bit Atari machines that's easy to set
up and allows for "easy" file transfers and "easy" I-Net ability? Must be
because "we" are a dieing breed. Hmnnfff!

b> over and over again to get a page printed out.

While this is all true, it should be appreciated that Timeworks Publisher was produced prior to NVDI becoming established and Twks2 implemented its own very successful font-caching and font-family support to compensate for the abject failure of Atari's FSMGDOS.

Certain versions of Timeworks can be made to work with certain versions of NVDI, but tbh it's far more likely to be successful with GDOS release 1.1 (the last of the original versions) and something like Quick STe v3.03 or Warp 9.

When I finally upgraded to NVDI I found I had a reasonable screen accelerator (slower than I was used to) and a font system that rendered excellent fonts but were incompatible with the applications I wanted to use them with - Timeworks mainly among them.

What I'm saying is, if Timeworks is the application then only use GDOS because that's what it was designed for. If Papyrus is the application, don't waste time with GDOS when it's designed to take advantage of NVDI/S

d> The Atari also kept the OS in ROM.

Of the 8-bit machine? Yes, ISTR that was necessary for those who only had a
cassette (single-sided floppy disks were expensive and rarely owned). The
disk OS (DOS) was software only.

d> It's just that the original OS was out there for everybody with a
d> modem.

Partly because DOS 3 was so crap that they had to reintroduce DOS 2.5 IIRC
-they did it to stop all the complaints AIUI. That partly explains the
attraction for replacement DOS's as well.

d> The ST also stores DOS in ROM (but aren't there alternative DOSes that
d> you can load. There must be if you want to read a CD).

All manner of utilities are available to patch the OS by intercepting (not
relocating the original) OS calls to replace them with better alternatives.
They're implemented using the Auto folder, usually.

DOS (Disk Operating System) is an outdated term with the ST, though. GEMDOS
is only one part of the OS on the Atari ST, along with BIOS, XBIOS, GDOS
(TOS) and the AES and VDI (GEM). GDOS (the Graphical Device Operating
System) has *always* been a software extension and people have been replacing
it almost from the outset (NVDI, G+Plus, AMC etc). There's replacement VDI's
(NVDI), replacement AES's (MagiC, Geneva, N.AES) et al.

The very first ST's (before the STF or STM and certainly before the STFM) had
a disk loadable TOS, but the number of machines we're talking about here is
minimal - certainly before mass-marketing of the ST, when it reverted to TOS

in ROM.

There's little point in a replacement single-tasking OS, but those like MagiC can run single-tasking just as well as co-operatively multitasking or pre-emptively multitasking.

Device dependent drivers required to access hard disks or CDROM's are also readily available (ICD, HDDriver, CBHD, SCSITools, Extendos etc). These add features to the built-in BIOS rather than replace them AIUI.

Does that answer your questions?

Here comes my enormous sig again... <g>

FROM: SSweet@mettav.demon.co.uk
SUBJ: Than's Write using landscape mode w/HP-520 printer

r> I can't get That's Write to print in landscape mode on my HP-520 using
r> The Deskjet+/500 driver. Any ideas?

Bit short on memory perhaps, you could try a print to file, then dump that
from the desktop?.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

** Mega STE + PAK 030 @40Mhz, 68882 FPU, 4 Meg ST, 16 Meg TT RAM **
-= Don't walk through the screen door, you might strain yourself.

## 2499. Lattice C 5.5 or 5.6?

Newsgroup: comp.sys.atari.st
Date: 1997-02-05 00:00:00 UTC
From: michael@fastlane.net
Message-ID: <5d90t0$q0o@news2.nkn.net>
Source record: 128329

Hi all!

I've ordered and received Lattice C from Oregon Research. One problem -
I ordered 5.6, but the box, manuals, and floppy disks are all labeled 5.5.
So, is it 5.5 or 5.6? The floppies are still unopened, so I have no problem
shipping it back.

BTW, I've tried repeated through email, FAX, and phone to get hold of Oregon
Research, but they refuse to return my calls or my email. I've told them
that if I do not receive a response by this Friday, I'm shipping the entire
package back and refusing payment on my credit card. Another fine example
of customer service :(. I guess next time I'll order from a UK software
house.

Thanks,

Mike White (michael@fastlane.net)

Oops! I'll erase that address from my list then.
Sad when Atari dealers/companies close down, isn't it.
But hopefully new ones will emerge.

>ordering direct the best method?

No, we don't have Falcon Speed anymore. The developer stopped
manufacturing
them. I'd be surprised if you could find one anywhere. However, most of
our
other products are still available. There isn't anything the German
office
has that we don't, so we should be able to take care of you. Please ask
if
you have any questions.

Thanks, and take care.

Only you can really answer that one !

It depends on how much time you have or want to invest in a machine that
is really only supported by users. If you are into collecting cool
computers, then yes.

> 2) I notice that it has a port on the back marked "hard drive." What kind
> of hard drive? Where can one be gotten?

You need an a host adapter, to convert the (almost SCSI) "hard drive."
interface into something that can talk to SCSI disks.
>
> 3) As best as I can figure, it has about 1 meg of memory...can that be
> upgraded? If so, how...etc.?

You need a memory expansion board, used to be available from Marpet, may
be harder to get nowadays. You could do your own.
>
> 4) What other types of upgrades (if any) can be done to it?

A short list.

Put it into a bigger case
Expand the memory
Expand the graphics.
Add more serial ports.
Add an accelerated processor + FPU.
Add a high performance graphics card.
Add an IDE controller.

# 2509. PTC1426 still for sale cheap!

Newsgroup: comp.sys.atari.st
Date: 1997-02-05 00:00:00 UTC
From: thechyld@harold.eastky.com
Message-ID: <855132976_OASIS_@harold.eastky.com>
Source record: 128339

Okay, a previous deal fell through... So now I still have this Atari PTC1426 monitor for sale for only $100.00 plus COD/S&H... Excellant shape, its in the original box, although I don't have the manual. Comes with a base, and power supply cord/video cable-plug for a standard VGA or TT030 hookup. Can be used with a PC in VGA mode or with the TT030 (TT mode) or as I've been using it-with my Falcon 030 with the VGA adaptor. Gives 640 x 480 res with upto 256 colors... Very nice condition. Send E-Mail with offers...! Thanks.

PS The only reason I'm selling
it is because I got a NEC-3D
Multisynch for my Falcon...!

<snip>

> As the upgrade disables the Blitter chip, yet speeds up the CPU, does anyone
> with the Nemesis or other accelerator board installed use a RamDisk and
> HOWFAST is it? I currently use MDisk at the above read rate.

I'm afraid I don't have any speed test figures for Nemesis with a
RAMdisk handy, but I do know that it is possible to use Nemesis with the
Blitter half-clocked, rather than completely disabled, as that's how
I tend to run Nemesis by default. It's not as fast as normal of course
( 12.5 MHz max. on my 50Mhz Nemesis 'high' clock ) but it works.

I can't remember whether MDisk uses the blitter, but the acceleration
of the CPU & bus is such that straightforward data transfers are likely
to be faster when the blitter is _not_ used. ( Ask Douglas Little
of BSS for a more complete description of the blitter's failings. )
If MDisk is STFM compatible it will have ordinary CPU data transfer
code which, presumably, will be used in the event that the blitter
is unavailable.

In short, I wouldn't worry too much about the speed of the blitter
under Nemesis. I had a few concerns regarding compatibility initially,
but the half-clocking option means that you can't really lose.

Hello !
(This is a translation of a previous message)

I'd like to buy an Atari STE (or better) with at least :
- A SCSI Hard disk drive
- A SCSI/DMA adaptator (in case of a STE)
- 2 Mb of RAM

To conclude, it would be better if coming from France or any
French-speaking country (mainly for the keybord).
Thanks for reading,
make offers at the following adress.

Yves Gablin.

Source record: 128346

My thanks to everyone ho helped solve this problem. The Falcon speed is now out of my machine and will shortly be on its way to its new home. The location of the jumper is marker clearly on the smaller bank of connectors with a white outline. I couldn't find the original jumper, but one off an old IDE controller card in my junk drawer worked just fine.

It just goes to show when in doubt RTFI. Or ask the freindly folks here at CSAS.

Thanks again.

(now I have to decide if I want the CD-Rom drive or more RAM)

Yep.... you can find it at:

gopher://sunsite.doc.ic.ac.uk:70/1/0-Most-Packages/atari/umich/Utilities/Desktop

You'll need both "NoDsk301.lzh" and "NoSys100.lzh" archives.

It's a really nice looking desktop too - very 3D and modern looking.

Ok, I got all of this.
But what if your sh.ttp crashes with every mint version you tried?
I use mintnet 1.10,hsmod7,freemint1.12.5 did everything with was documented.
But it wont work because sh crashes?
Can anyone post his working mint.cnf file. (or email it to me?)
I have some nice additions in mine mint.cnf file (with xboot and a startup
screen picture (for fun)). If your interested I'll post it.
In the mean time I'll be trying to fix this.

Bye bye!

# 2520. **NEW** Big Atari Sale Remains at final lower prices!!!

Newsgroup: comp.sys.atari.st

***Blow-Out on my remaining Atari product.***

I have sold a good supply of my Atari stuff over this last week and now comes the blow-out sale. I will show the package deals for all of certain categories and single prices.

Volume Buys:
All software and magazines and books on this page = $200.00 plus freight.
(another words, all non hardware)

Hardware
---
Atari TTM195 19" Monochrome High Resolution Monitor = $175 plus freight.
I will not go lower than this unless your buying everything else on this page. $175 is my breaking point and an excellent deal at that.

Master (External 720k) Floppy Drive $20.00
Toadfile 44MB Syquest Drive (Dual Under Monitor Case) = $125.00
(Toadfile Includes: (3) 44MB Syquest Cartrdiges)
Apple External 2X CD ROM (SCSI) in External Case = $75.00
MaxxYoke Flight Yoke = $10.00
SteroTek 3D Glasses = $5.00
ComputerEyes Digitizer = $5.00

*****Non Game Software****** More professional kind
All (12) titles below for $100.00
or individual prices below......
---
WordPerfect = $10.00
PageStream 2.2b = $10.00
PageStream 1.8 = $10.00
Calamus SL = $50.00
Calamus 1.09 = $15.00
TimeWorks Publisher 2 = $15.00
LDW Power = $10.00
Accounts = $10.00
SpeedoGDOS 5.0 = $10.00 (disks only)
TouchUp = $15.00
GFA Basic 3.0 = $10.00
Atari Gemini (CD) = $10.00

*****Non Game Software******
$2.50 each or all (40) titles for $50 plus freight
---
Desktop Publisher
Data Manager

Cyber Paint
Cyber Studio 3D
Cyber Sculpt
Drafix Cad
Phaser 4.01
VIP Professional
SpeedoGDOS 4.2 (disks only)
Copy II ST
ProCopy
Personal Pascal
Easy Draw
Easel/ ST
Certificate Maker
Degas Elite
Aegis Animator
Flash
Easy Tools
MultiDesk
Label Master Elite
PrintMaster Plus
Sublogic Scenery Disk
The Music Studio
CornerMan
G+Plus
Generation Gap
Tune Up
First Word
HabaView
Music Construction Set
Atari Chemistry 1
Atari Planetarium
The Computer Guide To The Solar System
SuperCharger
Quick ST 3.0
NeoDesk 3.0
Generation Gap

*****Games******
All (26) games below for $25 total plus freight
---
The Pawn
Flight Simulator II
Vegas Gambler
Shanghai
Cards
Hacker II
Strip Poker II
Professor Craps
Gunship
Time Bandit

Major Motion
Falcon
Silent Service
The Hunt For Red October
Tracker
LCS Wanderer
BasketBall
Micro League BaseBall
High Roller
Arena
Frozen Legacy
Mean 18 Ultimate Golf
Balance Of Power
Chess Master 2000
Super Cycle
StarGlider

**** Books & Magazines ****
All (6) Books and (175 estimate) magazines for total of $50.00
or Books are $1.00 each
or Magazines are .50 cent each
---
Flight Simulator Adventures
Flying Flight Simulator
Atari ST Internals
The Atari ST Users Guide
OH! Pascal!
Compute!'s ST Artise with Disk

Start Disks (25 to 50 or so) = $.50 cents each
Many Magazines (over 175 issues) .50 cents each

**all items are plus freight**

> who's going to be selling it in the UK? Any ideas?

HiSoft would the the obvious choice, as they sell all other Oregon stuff
in the UK, including the Amiga version of TermiteTCP. Might be worth a
mail to sales@hisoft.co.uk here ;)

## 2523. BTfax and USR Sportster

Newsgroup: comp.sys.atari.st
Date: 1997-02-05 00:00:00 UTC
From: mike@bbsgate.interware.it.STRIP.THIS
Message-ID: <2584_mike@bbsgate.interware.it.STRIP.THIS>
Source record: 128353

In the end I was able to buy a new USR Sportster 33600, so I need to configure my BBS to receive faxes.

I had a ZyXEL U-1496E before and I was using this configuration in Semper:

```
; ----
; Modem settings:
Init |~ATH0M0&D3+FAA=1+FLID="De.Petris"|~
ReInit 5
Reset ATM0H1|
Dial ATX3DT
Answer AT+FDCC=1,3,0,2,0,0,0,0;+FCR=1|~ATA
HangUp v~^|+++ATH|
Busy ATH1|

Port Serial 2
Speed 57600
TxBuffer 8192
RxBuffer 32767

FaxReceiver D:\SEMPER\BTFAX099.TTP
FaxCmd -pD:\ -d10 -q -m
```

But I got an error from the Sportster now.

Have anybody a ready configuration setting ?

Btw, the above is good for a zyxel 8^)

Ciao, ** *Mike* ** www.interware.it/users/mike/ mike@interware.it

Atari Falcon 030 with 4 megs of RAM, DeskTopper case/keyboard, TT-Touch key kit installed, TOS 4.04, 2.5" hard drive kit (but no hard drive), a SCSI II cable, VGA/RGB/Multisynch Gizmo video adaptors, tons of software including CalAppt/AFM/SAM/MultiTos/ExtenDos Pro/ICD Pro Hard Drive Utils/ Ping 2000, etc,... All in like brand new condition.

Best offer approaching $500.00... Shipping via UPS-COD-CASH only.

Replies via E-Mail only, please. Thank you.

# 2530. Re: tos image

Newsgroup: comp.sys.atari.st
Date: 1997-02-05 00:00:00 UTC
From: Michael Grove <mgrove@owens.ridgecrest.ca.us>
Message-ID: <5dafds$772@ash.ridgecrest.ca.us>
Source record: 128360

While going to an unnamed site to download
a new release I discovered two versions
of TOS posted there. 2.06 and 3.06.
Also included were patches to run them
on the PAK030. I wonder if the manufactures
of the PAK had permission to do this
(not that the patches were provided by them)?.
I can see that when you purchase a PAK, normally
you would buy the ROMS, but I guess you could
cheat and boot off the 2.06 ROMS and load 3.06
into RAM without really owning 3.06.

What i'm wondering is, if Wizztronics statement
is true, why was it ok for the PAK manufactures
to modify TOS and sell the product and why did
Wizztronics feel so insecure about using a patched
version of TOS in their product (s)?.

This isn't suppose to startup a Wizztronics is
full of it thread, just the differences between
patent respects between countries.

Mike

Please don't ask where the site was.

>: Atari's with their disk-loadable operating systems. He's just more out of
>: date than Sinclap...
>
>From what people have told me,the ST could also load the OS from disk.
>Perhaps I mis-spoke...

Now children... :)

The only TOS on a disk is the old 1.0 and a few betas, but yes TOS
'does' come on ROM chips and to use them on any emulator you must
have a image file of the ROM on a disk(short of using the Gemulator
card).

Magic and Mint are loaded from the disk, but that's beside the
point...

Now back to the issue at hand, the only thing that worries me is
sending and receiving the TOS image like it's a PD program. I don't
think it is. There might be some dealers who can sell the TOS ROMs.

I knew as soon as emulation first came out, people will eventually
have to copy ROM programs and put them on a PC disk to use them. The
only "ethincial" way I can see of handling this is to copy your own
programs and keep them. Of course, there is no NEED to make any
backups of ROM programs...until emulation.

If you choose to use TOS images, it don't matter to me. Just try to
use your own TOS instead of something like putting it on a web site
for the whole world.

Usually.

>Our ISP offers a SLIP option from the shell account menu. Obviously
>the dialing commands in DIAL.SCR aren't needed. What should be left
>in or out?

Just leave it as it is. All you need do once you have the ISP end in
"SLIP mode" is enable stik and it should start working.

> Also, when you try to make a manual connection, it lists the SLIP
>parameters as MTU=1006 MRU=1006. Are these critical? Should DIAL.SCR
>have the same values?

Tricky one, there is no definitive answer. The general answer is "no,
the values don't matter" but this is only true if both ends implement
the protocol correctly so it is best to have them matching just in
case - it can also be more efficient.

In any case, something is wrong with one of the above values - there
should be a difference between them. MTU is always greater than MRU
(almost certainly by 40) so if you know one you know the other.

The staff at many ISP's don't know what they are talking about. If you
suspect this then (assuming one of the values is right) one of the
following should work ...

MTU=1006
MRU=966

MTU=1046
MRU=1006

If memory serves I think STiK now ignores MRU for the above reason but
it does no harm to set it in case I'm wrong.

You might also want to ask your ISP what their timeout period is and
if it can be manually set. For instance, the default demon timeout is
1 minute which I've now increased to 4 minutes. Firstly this gives me
time to perform a complete reboot without dropping the line (I just
enable stik after the boot). Secondly and more importantly, demon no
longer drops the line when Cab is formatting a complex page.

No way! The atari was the first version of Xenon and at the time it was one
of the best games around. They *almost* converted it into an arcade. The
video clip at the beginning of each level was cool, but the 3rd level was so
hard it was near impossible. I don't know where you can get it though, try a
independant computer dealer to see if they have any old games.

: You are talking bullshit. The Jaguar _does_ handle 64-bit
: instructions. Would you accept Marc Rosocha as a reference?

I think the point is if it has 64-bit registers (and data bus) it can move
64-bits at a time.I don't really see the point of 64-bit instructions.

> Can a SLIP connection be made manually with STiK? Our ISP offers
>a SLIP option from the shell account menu. Obviously the dialing commands
>in DIAL.SCR aren't needed. What should be left in or out?

Set CDVALID to DIRECT I think (that's from memory, perhaps someone with some
docs on them will correct me). This makes it skip all the dialing, the dial
script, the carrier check and everything else.

Then all you have to do is select the connect button in the STiK
dialogue box, and after a few seconds it will close without doing any
dialing, and STiK should then be active.

Be careful that the terminal software doesn't hang up when you quit it!

> Also, when you try to make a manual connection, it lists the SLIP
>parameters as MTU=1006 MRU=1006. Are these critical? Should DIAL.SCR
>have the same values?

Normally the MTU isn't critical; I've no idea about SLIRP or TIA connections
as I've never used one. It wouldn't do any harm to set them to match in
stik.cfg (I think they're in there and not dial.scr)

# 2542. Re: "Family Tree" type program?

>>text, one can include pictures(ie. of your relatives)? Thanks Mark Friedman
>
>Yes! there is a program called just that; "Family tree".

It doesn't include pictures yet. I still think it's the best genealogy
program for the Atari. Well, I would say that, wouldn't I, since I'm
one of the authors :)

Pictures may be added at some point, but they're not especially useful to
most users, as the ST won't display them very well and not many of our users
have Falcons.

>I can't remember where I downloaded it from, but if you use one of the FTP
>search engines available on the net you should try to search for "ftree"

ftp.cnam.fr in /pub/Atari/Applications

You want family_tree-v2.27-english.lzh (there's also a French version,
translater by Didier Briel), and if you have Papyrus, you might also want to
get family_tree-english-papyrus-format-manual.zip.[1]

Mark.[2]

[1] I like long filenames. It's thanks to me uploading family tree like that
that my ftp client can only fit one column on the screen when it lists that
directory instead of four.

[2] I don't normally "sign" usenet posts, but the footnotes look silly
otherwise.

More RAM. CD-ROM drives are as cheap as they are ever likely to be, but
they may go down again next week if something faster comes out. RAM, OTOH,
can't go down much further; it's almost at production cost now.

# 2544. Re: Than's Write using landscape mode w/HP-520 printer

Newsgroup: comp.sys.atari.st
Date: 1997-02-05 00:00:00 UTC
From: Oliver Skelton <skelton@gatwick.geoquest.slb.com>
Message-ID: <32F8DD01.D00@gatwick.geoquest.slb.com>
Source record: 128374

From memory (and with respect to a DeskJet500)...

That's Write can use dummy fonts which are aliases (screen copies) for
built-in printer fonts (and also possible downloadable fonts).

Some of the DeskJet built-in fonts can print in portrait mode only.

Thus I think one possible cause is trying to print a document using such
built-in fonts in landscape mode. If that is the case then changing to
other fonts might fix it... especially if they are not built-in to the
printer as they then will be downloaded in graphics mode.

Having a device attached to the SCSI bus that is not powered up while the system is in use is, bluntly, a Bad Idea. Especially if that device is a bus master when it /is/ turned on. I would advise leaving the Falcon turned on (you can shut down the monitor if you're not using it).

We bought an st in 1985 and as a kid I found the graphics to be
incredible. Thinking back on it I still think they're pretty
fantastic. And, I love the interface. Our version has the GEM
operating system hardwired in the computer. I remember games like
TestDrive and some bowling game, starglider,dungeon master etc. By the
way we still have it along with the color and black and white monitors
with the two drives. The monitors are what really blow me away. the
resolution is incredible. And, they weren't too terribly expensive at
the time really. I hadn't thought about it for years until I started
looking at mac world and then typed in atari st for a search.
Apparently it still has a huge following.
Question to anyone:
Why do you think it died in the US? And, will it ever return?
I mean who wants to type copy a:example.dat b: when you can just drag
and drop? It was so much better than the stuff then and now that I
don't understand why were not all using sts.
dan

>>
>>You're right, the Jaguar was hastily produced, and some of the games
>>were rather... well, SNES-like... However, it *was* a 64-bit machine.

The bitness of a machine depends on what definition you use.
I'd be inclined to call the Jaguar a 64 bit games system, but I wouldn't
call a normal computer based on the same chips anything but 32 bit.

>>The Jaguar has one MC68000 (16/32-bit), four 64-bit RISC processors,
>>three of which are more or less completely dedicated to graphics, but
>>could probably be used for processing as well, and one 32-bit RISC

>
>You both got it wrong.

And so did you, but you were rather close. ;-)

>The Jag has a MC68000 and two identical 32-bit RISC processors (one of

They're not identical, but very similar.
They both have some instructions that the other doesn't.
Also, the 'DSP' has more local memory and according to some people a
16 bit wide bus (I'm not quite sure about that).

>which was intended to handle sound processing). It also has a couple
>coprocessors to accelerate things like blitting, sprites, etc. The 64-bit
>element in the whole affair was the memory bus connecting the various
>processing elements and the 2MB DRAM memory together.

It's not only the bus that's 64 bit. Both the object processor (a sort of complicated sprite engine) and the blitter can operate on 64 bit values. Those two are in no way RISC processors, though, as some people have claimed. One of the RISCs can read (and write IIRC) 64 bits of data with one instruction as well.

>Does it really matter that none of the processors in the machine cannot >handle 64-bit instructions? No. The only reason the N64 to has a 64-bit >CPU is that SGI designed the thing, and they're partial to the 64-bit MIPS

Quite right. Most of the instructions for the Jaguar RISCs are actually 16 bit, though, even if they do operate on 32 bit values. Naturally, the instruction size has little to do with anything.

>There were clear benefits for game consoles to move from 8 to 16 to 32 bit >CPUs. These jumps allowed larger address spaces and quicker computation >(because 16 and 32 bit calculations are very useful). But 32-bit address >spaces are overkill for games in the immediate future, and 32-bit numbers >have a large enough range that you don't really need more except in very >rare cases.

Quite right again. There _are_ cases when you can profit from 64 bit wide operations, though, but I'd be very surprised if they were very common for game console code.

## 2563. article cancelling (was: test)

Newsgroup: comp.sys.atari.st
Date: 1997-02-05 00:00:00 UTC
From: bkozlowski@nordnet.fr
Message-ID: <855151800_OASIS_@nordnet.fr>
Source record: 128393

In article <5d5irk$akk@ornews.intel.com>
atari@teleport.NO.SPAM.com (Rich Tietjens) said:-

>Add a Control: header and put "cancel" on that line followed by the
>message-ID

If the used newsreader don't allow a "Control:" header, you can (but
test it before in a local test group) perhaps just put the "cmsg cancel
<message-ID>" in the "Subject:", as some newsservers add automatically the
"Control:" line (not all, and this can be changed in it's config).

>make sure the newsgroups: header contains control and at least one of the
>newsgroups where the original message was posted.

No, just the original's message group(s), no crosspost to control,
it's not a real standard group. In fact on some servers it could be named
control.cancel (and control.newgroup, control.rmgroup, etc...), or even
some servers have a completely different way to store cancels.

When it exists, this control group is not shared with other servers
(if the server is well configured), so the only way to have the cancel
message distributed on all servers where the original message is gone, is
to put exactly the same "Newsgroups:" line, with exactly the same group or
list of groups as the original.

Bye! Bruno.

In article <Pine.LNX.3.95.970204212108.26108A-100000@moose.erie.net>
Dennis McGuire <mcguired@moose.erie.net> said:-

> Can a SLIP connection be made manually with STiK? Our ISP offers
>a SLIP option from the shell account menu. Obviously the dialing commands
>in DIAL.SCR aren't needed. What should be left in or out?

You can make a connection using a normal terminal programme, and enable STiK
after you have done so.

> Also, when you try to make a manual connection, it lists the SLIP
>parameters as MTU=1006 MRU=1006. Are these critical? Should DIAL.SCR
>have the same values?

I suppose you mean DEFAULT.CFG. Well, for the best performance, set the MTU
in DEFAULT.CFG to 1006, and the RCV_WND to 2898.

Greetz,

Maurits.

I'm am sorry to Daron and anyone else I might have offended in my
original post, for the record he has not been linked with a porno
racket on the net. It was very bad wording, and I hope I've not
offended anyone. All I wanted was to ask the questions...

> be considered libelous.

That's what I was trying to say all along, Phil. Well said. When Colin Fisher-McAllum rang me last week to tell me the news, he said that Daron had asked him to post to this ng with the news, because of the ramifications re NeST. Colin wasn't sure how to, having just switched ISPs and not explored Usenet at all. Colin and I both worked on a very carefully worded message which informed people while attempting to kill any 'shock horror' threads before they started. Sadly, people didn't read that bit and decided that speculation about Daron was permissable ;/

The intention was to pass the news as Colin told me Daron had requested, and to attempt to stem the flow of rumour and speculation before it started. As the poster of the original, I agree with Phil's above comments 100%.

> Storing of 'porn' in any electronic or magnetic format is illegal under
> various UK laws. Of course you must first define 'porn', this is where the
> law becomes vague.

Not always the case. Anything involving 'explicit depictions of the sexual act' is illegal here in the UK. NO COMMENTS from International users on our 'weird' censorship laws, please, that's not the issue here.

> FACTS, that is what you are seeking here, but before you ask other
> people to supply facts, get yours RIGHT.

I'm sorry you feel annoyed at the previous posting (not mine, and I've forgotten who's it was). As I said, the intention was to *stop* that sort of shit from happening ;/

Phil, please tell Daron that those of us who know him are behind him 110% here. We know him well enough, and we all look forward to seeing him back here and in NeST - something which wouldn't exist without Daron.

ATB, Frank.

***Blow-Out on my remaining Atari product.***

I have sold a good supply of my Atari stuff over this last week and now comes the blow-out sale. I will show the package deals for all of certain categories and single prices.

Volume Buys:
All software and magazines and books on this page = $200.00 plus freight.
(another words, all non hardware)

Hardware
---
Atari TTM195 19" Monochrome High Resolution Monitor = $175 plus freight.
I will not go lower than this unless your buying everything else on this page. $175 is my breaking point and an excellent deal at that.

Master (External 720k) Floppy Drive $20.00
Toadfile 44MB Syquest Drive (Dual Under Monitor Case) = $125.00
(Toadfile Includes: (3) 44MB Syquest Cartrdiges)
Apple External 2X CD ROM (SCSI) in External Case = $75.00
MaxxYoke Flight Yoke = $10.00
SteroTek 3D Glasses = $5.00
ComputerEyes Digitizer = $5.00

*****Non Game Software****** More professional kind
All (12) titles below for $100.00
or individual prices below......
---
WordPerfect = $10.00
PageStream 2.2b = $10.00
PageStream 1.8 = $10.00
Calamus SL = $50.00
Calamus 1.09 = $15.00
TimeWorks Publisher 2 = $15.00
LDW Power = $10.00
Accounts = $10.00
SpeedoGDOS 5.0 = $10.00 (disks only)
TouchUp = $15.00
GFA Basic 3.0 = $10.00
Atari Gemini (CD) = $10.00

*****Non Game Software******
$2.50 each or all (40) titles for $50 plus freight
---
Desktop Publisher
Data Manager

Cyber Paint
Cyber Studio 3D
Cyber Sculpt
Drafix Cad
Phaser 4.01
VIP Professional
SpeedoGDOS 4.2 (disks only)
Copy II ST
ProCopy
Personal Pascal
Easy Draw
Easel/ ST
Certificate Maker
Degas Elite
Aegis Animator
Flash
Easy Tools
MultiDesk
Label Master Elite
PrintMaster Plus
Sublogic Scenery Disk
The Music Studio
CornerMan

Generation Gap
Tune Up
First Word
HabaView
Music Construction Set
Atari Chemistry 1
Atari Planetarium
The Computer Guide To The Solar System
SuperCharger
Quick ST 3.0
NeoDesk 3.0
Generation Gap

*****Games******
All (26) games below for $25 total plus freight
---
The Pawn
Flight Simulator II
Vegas Gambler
Shanghai
Cards
Hacker II
Strip Poker II
Professor Craps
Gunship
Time Bandit

Major Motion
Falcon
Silent Service
The Hunt For Red October
Tracker
LCS Wanderer
BasketBall
Micro League BaseBall
High Roller
Arena
Frozen Legacy
Mean 18 Ultimate Golf
Balance Of Power
Chess Master 2000
Super Cycle
StarGlider

**** Books & Magazines ****
All (6) Books and (175 estimate) magazines for total of $50.00
or Books are $1.00 each
or Magazines are .50 cent each
---
Flight Simulator Adventures
Flying Flight Simulator
Atari ST Internals
The Atari ST Users Guide
OH! Pascal!
Compute!'s ST Artise with Disk

Start Disks (25 to 50 or so) = $.50 cents each
Many Magazines (over 175 issues) .50 cents each

**all items are plus freight**

Yes you ca use two scsi initiators on the same bus with HDDriver but better yet get a SMART active sensing scsi switcher (cost ~$400.00) could be cheaper.

Check this web page: damm sorry can't find it but the company is called Granite _____ they advertise in the back of MAC World, they make all sorts of hardware to solve most scsi problems.

Now I have to find that web page.... (BTW the company is in California )

Rich

>> straight forward and requires the card and a lot of wires :) It uses
>> the Mega BUS but I don't know all that much about the upgrade because
>> it is in German instructions and has Platine files (what is platine?).
>> Can someone give me a better idea of what this upgrade is and how hard
>> it is and what work is i involved?? Thanks.
ja>
ja> My German is probably as bad as yours :( , but I think 'platine' is
ja> PCB and the files are the PCB layout(s)?

Yep, further to this you can get the demo of Platine (the PCB layout prog
responsible for designing the layout) in German or French from ftp.cnam.fr

Also the demo version of Scooter (another PCB layout prog) will print out
these Platine produced files, I don't have an ftp site address for the latter
I'm afraid.

Speak to 'ya later!

# 2573. Magnum ST Erfahrungen

Newsgroup: comp.sys.atari.st
Date: 1997-02-06 00:00:00 UTC
From: aixit@aol.com
Message-ID: <19970206132300.IAA29263@ladder01.news.aol.com>
Source record: 128272

Magnum ST

Die ersten Erfahrungen.

Durch die Ank�ndigung, dass die Magnum ST nun bei aixit lieferbar ist
wurden etliche Karten an Leser der Atari Gruppen verkauft. Einige Karten
wurden in Aachen in diverse Computer eingebaut.

Folgende Erfahrungen sind sicherlich von breiterer Interesse:

Wodurch unterscheidet sich die Magnum ST von der Karte,
die der Software Service Seidel anbietet?
Durch nichts. Es handelt sich um das gleiche Produkt vom gleichen
Entwickler.

Wie wird die Magnum ST eingebaut?
Die Magnum kann auf oder unter den Prozessor gesteckt werden. Dazu ist es
notwendig, das entweder der Prozessor gesockelt wird oder das ein Sockel
auf den Prozessor aufgel�tet wird.

Sind weitere L�tungen im Computer erforderlich?
Es muss noch ein Kabel angel�tet werden. Die Stelle an die das Kabel
angel�tet weden muss ist f�r alle Computertypen in der Anleitung
abgedruckt.

Muss an der MMU/GLUE gel�tet werden?
Nein. Ausser dem Sockel und dem einen Kabel sind definitiv keine weiteren
L�tungen erforderlich.

Welches Betriebssystem wird ben�tigt?
Auf der Magnum ST sind Fassungen f�r TOS2.06 vorbereitet. Es empfiehlt
sich eine eventuell vorhandene TOS-CARD zu entfernen und die EPROMS
einfach auf die Magnum zu stecken. Die TOS-EPROMS geh�ren nicht zum
Lieferumfang dazu. Anwender von MagiC ben�tigen keine TOS2.06 EPROMS.

Wie wird der neue Speicher erkannt?
Im Lieferumfang befindet sich eine Diskette mit einem Progr�mmchen f�r den
AUTO-Ordner. Das Programm erkennt die Magnum, erkennt die Gr�sse des
eingesetzten SIM Moduls und meldet den Speicher nach dem Test beim
Betriebssystem an.

Kompatibilit�t Magnum ST % HBS240
Es gibt keine Probleme. Da der HBS240 nur die unteren 4MB cached wird der
Speicher der Magnum leider nur mit der normalen ST-RAM-Geschwindigkeit
genutzt. Aus Stabilit�tsgr�nden sollte die Magnum auf den HBS gesetzt
werden. (Der HBS240 ist recht gross wg. der konventionellen Bauweise). Der
mitgelieferte Sockel gen�gt. Es werden keine zus�tzlichen Bauteile

ben�tigt.

Kompatibilit�t Magnum ST % HBS640
Es gibt keine Probleme. Da der HBS640 bis zu 12MB cached wird der
Zusatzspeicher bis maximal 8MB gecached. Optimal ist in diesem
Zusammenhang eine Magnum Karte mit 8MB. Die 8MB Magnum ist sowieso die vom
Preis/Leistungsverh�ltnis beste Version. (Maximaler Speicher ohne
Verlust).

Kompatibilit�t Magnum ST % MULTIBOARD
Die Kombination aus Magnum und Multiboard ist nicht sinnvoll.

Kompatibilit�t Magnum ST % TOS-Karten
Die Magnum ist nat�rlich in der Lage mit einem TOS2.06 auf einer TOS-Karte
zu arbeiten aber es ist sinnvoller und sicherer die TOS-ROMS auf die
Magnum zu stecken und die alte TOS-Karte einfach zu entfernen.

Aktuelle Preise f�r die verf�gbaren Atari Speicherkarten:

```
Magnum ST

0MB 229,-
4MB 259,-
8MB 279,-
16MB 379,-

Magnum Falcon

0MB 229,-
4MB 259,-
8MB 289,-

TT030

0MB 179,-
16MB 339,-
32MB 489,-
64MB 799,-
```

(Es sind auch noch andere Ausbaustufen verf�gbar)

Atari died due to bad marketing. They had a rep for being "that video
game company," and were never taken seriously as a computer company.
Yeah, GEM was great for its time (I got my 520 ST [still working] in
1986), and it cost thou$and$ less than an IBM. But, you don't seriously
think anyone who hates typing "copy a:name.ext b:" still does, do you?
Since the early 90s, we've had Windows on the IBM, and you've never had
to do that with Macs.

# 2577. Re: PPPkit config questions

Newsgroup: comp.sys.atari.st
Date: 1997-02-06 00:00:00 UTC
From: caesar@nwlink.com
Message-ID: <5dcohq$hlu$1@texas.nwlink.com>
Source record: 128276

```
: Ok, I got all of this.
: But what if your sh.ttp crashes with every mint version you tried?
: I use mintnet 1.10,hsmod7,freemint1.12.5 did everything with was documented.
: But it wont work because sh crashes?
: Can anyone post his working mint.cnf file. (or email it to me?)
: I have some nice additions in mine mint.cnf file (with xboot and a startup
: screen picture (for fun)). If your interested I'll post it.
: In the mean time I'll be trying to fix this.

: Bye bye!
```

Alrighty then...

Here's my working MINT.CNF file. I hope it helps.

```
cd U:\
CON=u:\dev\console
PRN=u:\dev\centr
#setenv UNIXMODE /cu
setenv TEMP /tmp
setenv TEMPDIR /tmp
setenv PATH .,u:\bin,u:\etc,u:\usr\ucb
#setenv SHELL \bin\sh
setenv TERM vt100
#setenv PCONVERT PATH,SHELL,HOME,CDPATH
setenv HOME /home

sln d:\mintnet u:\ # <- ici
sln d:\mintnet\bin u:\bin # <- ici
sln d:\mintnet\etc u:\etc # <- ici
sln d:\mintnet\usr u:\usr # <- ici
sln d:\mintnet\var u:\var # <- ici
sln d:\mintnet\tmp u:\tmp # <- ici
sln d:\mintnet\home u:\home # <- ici
sln d:\www130\cab u:\cab # <- ici

INIT=C:\MINT\OLDGEM.PRG

exec \bin\ifconfig lo0 addr 127.0.0.1 up
#exec \bin\sh.ttp \etc\rc.net
exec \bin\syslogd
#exec \bin\inetd
echo Now booting MiNT.
```

Any answers yet?

# 2578. Re: How do I split .AIF on Ataris?

: The offline functions in Cubase Audio Falcon offer this ability.
Or you can get the (german) program that comes with the recent recwin 114.
Dunno the name that precise though. ???525g.prg (or something like that)
Should be in any mayour ftp site. (atari.archive.umich.edu or ftp.cnam.fr)

## 2579. Q: Time stretching an audio file ?

Newsgroup: comp.sys.atari.st
Date: 1997-02-06 00:00:00 UTC
From: Mikael Hillborg <Mikael.Hillborg@softlab.se>
Message-ID: <32FA49BE.3A8C@softlab.se>
Source record: 128278

Is there any program on an Atari that lets me *timestretch*
(not pitch shift) a *stereo* audio file in say wav, aiff, avr
or any other format ?

( CAF do it on MONO files only and splitting a stereo file in two
mono, performing the time stretch and then assembling them together
again to a stereo file gets the channels sligthly out of sync )

/Mikael

From: "John Hutchinson"
Message-ID: <5dd61n$gn2@lana.zippo.com>
Source record: 128287

I have a -bunch- of older Atari goodies and related equipment that needs a new home. Would definitely like to dispose of all this to one person to save the buyer freight and me frustration. No set price in mind, but if you are interested in this package, please reply via email at hutchinj@orlando.veda.com. Central Floridians can pick this stuff up.

-Hutch-

Hardware:
========
Atari 520STFM w/1Mb RAM, internal and external DSDD floppy drives, mouse, cables, etc. Will include a grab bag of 100+ floppies (games, utilities, etc) in plastic disk storage boxes, too. Good machine for the kids.

ST Software:
===========
- GFA BASIC 3.5e, interpretor and compiler, with full docs.
- UIS III Universal Item Selector w/docs.
- Populous II, w/docs.
- Falcon by Spectrum Holobyte, w/docs & box.
- Monkey Island by Lucasfilm, w/docs & box.
- Dungeon Master by FTL, w/docs & box.

Atari Books:
===========
- GFA BASIC Training Reboot Camp, 209 pgs, the classic by DA Brumleve.
- GFA BASIC Book, 308 pgs w/disk by Michtron.
- GFA BASIC 2.0 manual, 297 pgs by Michtron.
- GFA BASIC and Assembler, 364 pgs w/disk.
- Inside Atari BASIC (for 8-bits), 183 pgs by Atari.
- ST Assembly Language Workshop, 261 pgs w/disk, by Clayton Walnum.
- C-Manship Complete, 398 pgs w/disk, by Clayton Walnum.
- Atari ST Application Programming, 530 pgs, by Pollack & Weber.
- Atari ST GEM Programmer's Reference, 414 pgs, by Abacus.

Also available separately:
=========================
- Syquest 270Mb removable cart drive, external, w/4 carts & SCSI cable.
- GFA BASIC for DOS, w/full docs in 2 GFA Vinyl Binders.
- GFA BASIC for Windows, w/6 manuals (over 1,000 pgs!).
- Programming GFA BASIC for Windows, tutorial book in binder.

Magnum ST

The first experiences.
```

Through the Ank&#65533;ndigung, that the Magnum ST now with aixit lieferbar is
became quite cards to reader the Atari groups sells\sold. Some cards
became in Aach in various Computer built in.

```
Following experiences are surely of wider interest:

Wodurch distinguishes (self) the Magnum ST of the card,
that the software Service Seidel offers?
Through nothing. It deals with (self) around the same product from the same
developer.
```

How will(_be) the Magnum ST built in?
The Magnum can to or under the processor become put. To it is it
necessary,that either the processor held will(_be) or the a base
to the processor aufgel&#65533;tet will(_be).

Are further L&#65533;tungen in the Computer required?
It must still a cable become angel&#65533;tet. The place to that the cable
angel&#65533;tet weden must is f&#65533;r all Computertyp in the instruction
printed.

Must to the MMU/GLUE become gel&#65533;tet?
No. Ausser the base and the a cable are definitiv no further
L&#65533;tungen required.

What operating system will(_be) ben&#65533;tigt?
On the Magnum ST are version f&#65533;r TOS2.06 prepares. It recommends
(self) a possible(ly) available TOS-CARD to remove and the EPROMS
simple\ly to the Magnum to put. The TOS-EPROMS geh&#65533;ren not to the
supplied range to it. User of MagiC ben&#65533;tigen no TOS2.06 EPROMS.

How will(_be) the new memory recognised?
In the supplied range locates\ed (self) a disk with a Progr�mmchen f�r the AUTO-folder(s). The program recognizes the Magnum, recognizes the Gr�sse of the
put SIM module and reports the memory after the Test by the operating system to.

Kompatibilit�t Magnum ST % HBS240
It gives no problems. There the HBS240 only the lower 4MB cached will(_be) the
memory the Magnum unfortunately only with the normal ST-RAM-speed used. Out of Stabilit�tsgr�nden should the Magnum to the HBS become placed.
(The HBS240 is right big wg. The conventional Bauweise). The supplied with base gen�gt. It become no zus�tzlichen components ben�tigt.

Kompatibilit�t Magnum ST % HBS640
It gives no problems. There the HBS640 until to 12MB cached will(_be) the additional memory until maximum 8MB gecached. Optimal is in this connection a Magnum card with 8MB. The 8MB Magnum is anyway the from the price/Leistungsverh�ltnis best version. (maximum memory without loss).

Kompatibilit�t Magnum ST % MULTIBOARD
The combination from Magnum and Multiboard is not meaningful.

Kompatibilit�t Magnum ST % TOS-cards
The Magnum is nat�rlich in the position with a TOS2.06 to a TOS-card to work but it is more meaningful and safer the TOS-ROMS to the Magnum to put and the old TOS-card simple\ly to remove.

Current prices f�r the verf�gbaren Atari Speicherkart:

```
Magnum ST

0MB 229,4MB
259,8MB
279,16MB
379,
Magnum
Falcon

0MB 229,4MB
259,8MB
289,
TT030
```

0MB 179,16MB
339,32MB
489,64MB
799,
(It

are too still other development stages verf�gbar)

Aach,that 4,2,1997

<Bigga Snippa>

You didn't mention which serial patch you are using, nor what your modem
init string is, nor if you have ensured that you are set for hardware
hadshaking (e.g., CTS/RTS not XON/XOFF).

You should be using HSmodem 7 (or FastSerial if you have a TT - I dunno if
that works on a Falcon or not). The modem init string will depend on your
particular modem. Hadshaking should be set in your serial CPX if you're
using one (and also in the modem init string).

One other thing to look at is possible conflicts with other programs; sicne
you say that some pages worked in the past but don't now, I suspect you have
recently added one or more AUTO folder proggies, desk accessories, or CPXes.
Try booting with as close to a "clean" system as you can (you need the
serial patch, STIK_TSR, and a minimal control panel).

You're not going to like this but the above is one typical STiK
behaviour when it is being confronted with CSLIP _or_ possibly a badly
configured HSMODEM which you can discount if it works ok for something
else.

>9. One setting my ISP has on one of it's tech pages is MRU size = 512.
> This isn't in the DEFAULT.CFG file and when I put it in, nothing
> changes.

MTU should be set to 552 (MRU + 40). MRU was obsoleted a few versions
ago.

>10. Here is my DEFAULT.CFG file:
>
>ALLOCMEM = 500000
>SERIALPORT = Modem 2
>CDVALID = TRUE
>DIALFILE = dial.scr
>CLIENT_IP = 0.0.0.0
>TTL = 64

>IRCNICK = Mikey
>IRCSERVER = irc.primenet.com
>IRCPORT = 6667
>IRCPONGMSG = Why don't I work?

I have DFB_SIZE=1024, RCV_WIND=4096, PKT_SIZE=2048 but I'm not sure
which are now obsolete. I vaguely remember something about having to
be bigger than MTU. It does no harm to try them - obsolete and unused
variables are ignored.

I got the one with v2.07 in the title to work on my Falcon.
It needed to be run in ST-Hi or Low res. It seems to have taken
exception to my Afterburner so I can't run it any more :-)

Rich.

>C: partition until I zeroed it.

Not quite sure what you're doing wrong (if you are doing anything wrong at
all). I've been using Lharc 3.10 for a long time without any problems, but
I've also got an "environment" program installed on my system where the
temporary directory is defined. Perhaps this is what you're missing?
It might be worth a try.
You can download one such program from my FTP site:

ftp://ftp.sn.no/user/hallvart/atari/envir.zip (3 Kbytes)

My "environ.dat" file which contains the information itself looks like
this:

```
TMP=C:\tmp
CLIPBRD=C:\clipbrd
SHELL=D:\utility\unix\gemini\gemini.app
EDITOR=D:\editors\everest.35e\everest.prg
```

You may edit this for your own need, add or delete variables as you wish.
Hope this solves your problem.

I know, that's why I find it fascinating that more people aren't using mac clones. Simply because of the hardwired graphical interface that is so simple to use. I say mac clones because apple's big downfall has been the mac's expense. Now with the clones coming out perhaps people will sway towards the mac os. Personally I have never had, owned or used a mac but have read a bit on them. They seem to be a wonderful idea and have been since 84?, but noone seems to care.
Strange.
Dan

I have no idea who he is.

All the information I ever saw from people who actually programmed the
thing was that the CPU registers of the two RISC main processors were 32
bits wide. I recall one of them saying there was a 64-bit data move
instruction to utilize the full width of the memory bus. The blitter also
did 64-bit bus transactions, for obvious reasons.

You missed the real point of my post: that it just doesn't matter that the
processors in the Jaguar were not 64-bit. 32-bit is plenty for games.
The game ads screaming that 64 is twice as good as 32 are BS. There isn't
even a tremendous need for true 64-bit processors on the desktop, let
alone game machines.

```

```
absolutely.
and it doesn't have 64-bit instructions. well, the GPU can access the bus
64 bits wide if it wants, but this doesn't make a "64-bit instruction".
and if we're talking about the actual size of the instructions, those are
all 16 bits wide. all cpu-registers (gpu/dsp) are 32 bits wide.

>MTU=1006
>MRU=966

You're confused with MSS!!!! MRU is usually the same size as MTU, but as it
is a PPP parameter, STiK doesn't need it!!!
MSS should indeed be MTU-40, but you don't need to set this as STiK assumes
that already.

For a more detailed description of tcp/ip-parameters, see my homepage! :)

>or automatic hard disc wiping, or virus infecting?
>
>Think a bit about the security implications of what you've just suggested
>there.

It could be done if the same restrictions apply as they do to JAVA-applets:
A JAVA applet cannot access files on the local machines, nor can it connect
to other servers than the one it was downloaded from. So if CAB could have a
little TOS-environment from which the local filesystem cannot be reached, it
would be safe.
Personally I like the idea of adding a little something to web pages which
only Atari-users can see! :-)

Greetz,

Maurits.

## 2609. STiK dialer help?

Newsgroup: comp.sys.atari.st
Date: 1997-02-06 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <5dbg72$mp1@alexander.INS.CWRU.Edu>
Source record: 128397

Is there any way to fix the dial script so that if it gets a line, but
the proper responses aren't there, it will restart instead of just quitting???
My ISP sometimes (all too often, but its free, and has slip) answers the
phone, but just doesn't do the handshake right, or the baud rate gets
screwed up or something. Ay any rate, it gives a status message:
Timeout finding or some such and the dialer folds up and goes away. If
I go get a drink of water,all I can tell is that there's no panel there, but
I don't know if it connected or just gave up.
Anybody know a way???

It only stands to reason that where there's sacrifice, there's someone
collecting the sacrificial offerings. Where there's service, there is
someone being served. Make no mistake about it, the man who speaks to
you of sacrifice is speaking of slaves and masters - and he intends to
be the master.
-- Ayn Rand

-------------- begin WAUG flier ---------------

WAUG -- (Formerly 'The Washtenaw Atari Users Group')
(Now known simply as "WAUG")

What is WAUG? Over 12 years ago a few intrepid individuals decided to
============= start meeting regularly to share their enthusiasm and
knowledge of computers and related hardware/software
items. In June of 1987, after more than two years of unorganized and
informal meetings, the members developed and formally accepted a club
charter. Thus WAUG was born! Helping people get the most out of their
computer is WAUG's purpose.

Initially, the club was dominated by Atari afficionados, however in June
of '95 the executive board arranged to expand the club's resources to
include IBM and Macintosh users. WAUG is an ideal place to meet with
other persons who share your interests and to find answers to your
questions about using your computer -- no matter what machine you own,

how old it is, or your level of expertise.

Who's involved? Since its inception, members from cities outside Ann
============== Arbor (including Westland, Canton, Livonia, Milford,
New Hudson, Dearborn, Hartford, and even as far away as
Toledo) have regularly attended the meetings. Some members live as far
away as central Michigan, and one member lived in Montana (!) and joined
simply because he enjoyed receiving our newsletter.

How do I join? Membership in WAUG has only one requirement: an active
============== interest in personal computers. Annual dues are $15,
for which the member receives free monthly issues of the
club newsletter, opportunites to win valuable door prizes, and reduced
rates on disks purchased from the club's Public Domain/Shareware disk
libraries.

What will I find? A different topic is featured each month: Printers,
================= Education, Telecomm & the Internet, Beginners Woes,
Desktop Publishing, Scanners, Swap Night, MIDI &
Music, and Utilities are typical examples of what you'll find when you
visit WAUG. Drawings for door prizes take place at every meeting, and
the annual Christmas Party Meeting is not to be missed. There is no
dress code in effect at any of the WAUG meetings -- tuxedos and ballroom
gowns are perfectly acceptable. (However if you choose to wear these, we
WILL stare at you!)

How to contact WAUG:
====================

WAUG
14 Payeur
Ann Arbor, MI
48108

Voice: 313/971-8576
Modem: 313/971-6035
E-Mail: molin@atari.archive.umich.edu
harvey@mail.ic.net
WWW: http://ic.net/~harvey/waug.htm/

or just show up at any regular monthly meeting! Visitors are
welcome and we promise not to pressure you to join until we've seen your
face at least three times!

Where does WAUG meet? Meetings are held regularly on the second Tuesday
====================== of each month at Colonial Lanes located on South
South Industrial St. (across from Kroger) between
Stadium and Eisenhower streets. Meetings start at 7:30pm and usually run
to approximately 10:00pm.

# 2617. CAB/STiK/1040 STe Help

Newsgroup: comp.sys.atari.st
Date: 1997-02-06 00:00:00 UTC
From: please@no.spam.mail.here
Message-ID: <28492_please@no.spam.mail.here>
Source record: 128405

*Hi Dennis*, on 05 Feb 97 you wrote: ...respect, brethren

m>
m> Three members of our user group are having continuing problems trying
m> to run CAB 1.5 with STiK 1.12 on 4 Meg 1040 STe's, all with TOS 2.06.
m> I'd appreciate replies from anyone successfully running this
m> combination without encountering bombs regularly. I think a half hour
m> without bombing is our record!

Not quite the same setup here (Mega STe + MagiC through modem 2) but it ought
not to be much different. If you've got things running for half-an-hour then
most of the setup would appear to be correct.

m> Which versions of CAB.OVL and CAB_JPEG.OVL should we be running? How
m> many bytes are they?

CAB.OVL 46041 bytes 1-Dec-96 (v1.21)
CAB_JPEG.OVL 22532 bytes 27-Apr-96

Both are available from Flinny's home page.

m> Should the DEFAULT.CFG file parameters be changed (MTU, etc)?

It's most likely to be something in here:

```
ALLOCMEM = 210000 <- 200,000 often isn't enough
SERIALPORT = Modem 2 <- Modem 1 for you
CDVALID = TRUE <- Can't remember what this should be for you
DIALFILE = dial.scr
CLIENT_IP = 194.153.12.180
TTL = 64
PING_TTL = 255
MTU = 1500
RCV_WND = 4096
PROTOCOL = 0
REPORT = 0
UP_RESPONSE = 2
USERNAME = ukaaug
HOSTNAME = celerypatch.compulink.co.uk
FULLNAME = Harry Sideras
NAMESERVER = 194.153.0.18
IRCNICK = sid
IRCSERVER = irc.demon.co.uk
IRCPORT = 6667
IRCPONGMSG = You woke me up for this?
EMAIL = sidcelery@cix.compulink.co.uk
SMPT_HOST = mail.compulink.co.uk
```

If you have an HTTP_PROXY and HTTP_PROXY_PORT set, deleting them can often speed things up. If you've got any extra lines in your default.cfg they may turn out to be redundant with the latest STiK - several were removed because they did nothing useful (and sometimes hindered - eg MSS = ???).

Hope that helps...

b> I highly suggest you get NVDI rather than GDOS...

Agreed, I nearly included a mention of NVDI, however I'm not sure that all GDOS-aware progs will allow the use of vektor fonts, we all know about TimeWorks for example.

OTOH early versions of NVDI offered only bitmap font support alongside the benefit of its screen display acceleration, so a second-hand copy of (say) v2.5 would be OK I think.

Speak to 'ya later!

>I don't know if it connected or just gave up.
> Anybody know a way???

Hi Boris,

An easy way would be to repeat the phone number in your dial.scr file.
You can list up to 5 phone numbers of you ISP. This way if you get a time
out STiK will just dial the next phone number, and hopefully will connect :)

C'est la Vie,

Charles

# 2622. Why doesn't STiK work for me?!?!?!

Newsgroup: comp.sys.atari.st
Date: 1997-02-06 00:00:00 UTC
From: daymon@mammoth.psnw.com
Message-ID: <5dc3e6$64p@alpine.psnw.com>
Source record: 128410

Hi everyone!

I've done this many times before, but once again, can someone PLEASE help me get STiK and it's related software working with my ISP? I've tried all the settings for MTU, MSS, RCV_WND, and DFB_SIZE that my ISP recommended, that people here in newsland suggested, and have tried every one of the DEFAULT.CFG files that came in the older WWW packages, but none work for me. I've done some research to find out what these settings actually are (because I figured it would help to know what these things were that were mysteriously unexplained in the doc's), and have experimented with them to no avail. My ISP has graciously complied with all my requests as I've tried out every suggestion given me, yet it doesn't help at all! I'm at an impasse! Here is an in-depth explaination of my problem:

1. STiK connects and gets an IP address just wonderfully.
2. Every STiK-related program gives errors when I try to use them or just plain doesn't do anything.
3. CAB will Resolve the Host and Send the Request.
4. Most pages stick at "Receive data (0 bytes)"
5. Some pages stick at "Receive data (0/xxxx bytes)"
6. If it's an incredibly small page such as a Moved Object or 404 File not Found message, it loads fine.
7. The only pages I've had any luck with are Dirk Hagedorn's page and the IBM home page. But lately these have now stopped working.
8. VJ compression is off, all settings are according to my ISP's spec's, and all system-based settings are appropriate for a 4 Mb Falcon.
9. One setting my ISP has on one of it's tech pages is MRU size = 512. This isn't in the DEFAULT.CFG file and when I put it in, nothing changes.
10. Here is my DEFAULT.CFG file:

```
ALLOCMEM = 500000
SERIALPORT = Modem 2
CDVALID = TRUE
DIALFILE = dial.scr
CLIENT_IP = 0.0.0.0
TTL = 64
PING_TTL = 255
MTU = 512
MSS = 472
DFB_SIZE = 580
RCV_WND = 2048
PROTOCOL = 0
UP_RESPONSE = 2
```

```
USERNAME = Mikey
FULLNAME = Mike Freeman
HOSTNAME = ProtoSource
NAMESERVER = 205.199.144.101
IRCNICK = Mikey
IRCSERVER = irc.primenet.com
IRCPORT = 6667
IRCPONGMSG = Why don't I work?
```

Thank you very much in advance for any help you can give. I've been doing this since December 1995 with no luck!!! And I don't have enough experience deciphering techno-babble to get MintNet working, so I REALLY want to get STiK working!

> don't understand why were not all using sts.
> dan

(excuse the poverty of my english, I'm just a frog...)

My thoughs on this are that Atari died in the US because for most people there, it was just a game consoles company, and when I said to my american hosts that I used an Atari COMPUTER by my parents' home, they just couldn't believe it !
For that reason (and others), it will never fully return in the US, as it never fully entered there...
Among them, one of the 'other reasons' is that Atari never knew how to SELL, and Atari is not there any more to improve that point. 'Atari' is now is Europe (Germany, Switzerland, ...), with other names.

For the other question, the answer is NO. Nobody wants to type requests on his (her) keybord, but who still does (even with a PC, and God knows, if he exists, that I don't like PCs) ?

I think that Atari clones (and some old Atari) will still exist for a pretty good time, because it provides both the liberty of a PC (this one having so much that it can't stop being a problem) and the simpleness (does this word exist ?) of the Mac (this one being simple of use but so rigid that it is also a problem).
Let's hope it will continue because neither PC nor Mac satisfy me (I prefer the Mac).

Bye,
Yves Gablin.

From: bjr@edison.ebicom.net
Message-ID: <5dbplt$fqi@einstein.ebicom.net>
Source record: 128413

Jim,
I've never seen the inside of a mega...but I'd assume all you
need is 2.5 to 3.5 bracket...these are pretty standard at PC mail order
and retail places. Simply call and ask for SCSI 2.5 to 3.5 kit...
They "should know" what you're talking about. It should include a
mounting bracket and possibly a cable (I'm not sure if 2.5 SCSI uses
the exact cable as 3.5 drives...possibly smaller but same pin-outs?).

Hope this helps...
Brian

Alternatively, you could just use the "Shutdown" option in Magxdesk
or Thing... or press CTRL-ALT-DEL to get to it. Then click on
"Cold Boot" in the little alert box that pops up. Or you could
just press CTRL-ALT-SHIFT-DEL (if you don't use WBDAEMON, that is).

Nah. They will.

As we all know, the $5000 hammers stopped being fashionable with NASA last Thursday, so now they are after old, obsolete computers. Especially Atari.

I'll just donate my old Mega ST to them in exchange for $651,594, and we'll call it even. (It's worth more than that!)

{[:-)]

Mind you, I'll keep the TT I'm writing this on for another few years because NASA can't afford the $27,846,901 it is worth on the open market.

(They're gonna wait until it hits $38M before they buy it!)

From: d@mail.sstar.com
Message-ID: <5dchcp$28g$1@kiyoko.communique.net>
Source record: 128417

lharc 3.10 keeps writing temp dirs as C:\LZH\X\ or C:\LZH\::\ or even 2 copies of C:\LZH\X\ in the same partition. Needless to say, this has screwed up my C:\ partition many times. Diamond Edge could fix these errors in the past. But now I have a problem with C:\LZH\X\ that could only be fixed by zeroing the C: partition. The TOS 4.04 desktop Show item wouldn't work on the C: partition until I zeroed it.

Am I missing something in the lharc 3.10 docs? lharc 3.12 also makess bogus dirs.

Dave

# 2631. Newsie (V.66) and Munpack.ttp (see mime images on line)

Newsgroup: comp.sys.atari.st
Date: 1997-02-06 00:00:00 UTC
From: Michael Grove <mgrove@owens.ridgecrest.ca.us>
Message-ID: <5dc85p$eq9@ash.ridgecrest.ca.us>
Source record: 128419

I got bored of waiting for NetScape to display
some images at a binaries site I was
visiting (he,he) and got to thinking how nice
it would be to do this on the Falcon in more or
less real time, especially as my Macs serial
port only runs at 57.6K and my Falcons runs
the 33.6 Supra at full tilt.

I remember the Newsie docs saying that it only
supported UUE at the present. After looking in
the Newsie folder and seeing that all it did was
to call UUD.TTP, I renamed Munpack.TTP to UUD.TTP
and stuck it in the Newsie folder.

Using only Newsie as the viewer/editor, I subscribed
to the binaries group and got a listing. I clicked
on one of the rather large mime encoded jpg files
and let it load into the Newsie reader. Then I selected
extract binaries from the drop down menu.

I had ImageCopy running as an ACC and went to the
folder specified for the group I was in. There was
the jpg file ready to view without even leaving
Newsie (Wow, what a bod!:).

If there was another call feature that could pass
perimeters I guess you could use the DSP decoder
for faster viewing but I didn't see a way to try
this out. Maybe assign a hot key macro where you
pass the file name to APEXJPG.GTP?

The only problem was that (under TOS 4.04 at least)
Newsie dosen't like to redraw the top portion of the
menu. It's not much of a problem as the drop downs
still work so just float you curser around to where
you want to be. With an intellegent O/S like MagiC
this problem probably won't occur.

I also set up Newsie in an open area of a hard disk
that I use for imaging and audio recording as the
mime files are sometimes quite large. This wasn't
necessary, just a precaution.

I think that using Mpack has already been covered
in the group, but I kink of got lost in the conversation
that was going on beneith the meaning of the post.

Excuse me if I duplicated what someone else has
already said.
If your confused, as I usually am, feel free to ask
about it:)

Mike
P.S. I'm over forty so it was ok for me to visit that
specific binaries group:).

Well, there are lots of good reasons for getting a PC - but this does not
mean that you have to abandon the Atari as well.

My advise is that it is not worth selling the TT, as although you have a
nice machine, you probably wont get back enough money to justify it. Also,
when you want to use GEM software you wont have to put up with an emulator.
And you can have a break from playing wipeout, quake, duke-nukem, descent,
or whatever suits your tastes...

# 2636. Help: Keypress detection

Newsgroup: comp.sys.atari.st
Date: 1997-02-07 00:00:00 UTC
From: D.E.Jones@ex.ac.uk
Message-ID: <D.E.Jones-0702971114230001@144.173.2.237>
Source record: 128174

Hi all,
I am a keen programmer and I am having a problem with detecting keypresses. This is what I would like to be able to do:

- Call a function that will return the scan code of any key that is pressed down at the time.

> I know that the Atari ST has double debouncing so it would only be able to return the scan code for the last key that was pressed, but that will be fine.
> I can call a function to return a value for the shift, control, etc.. keys without any problems using one of the XBIOS routines. I would like a similar function for the other keys.
> I have tried using other XBIOS routines relating to keyboard detection, but they all seem to use a keyboard buffer. This means that it returns the last key that was pressed, and not necessarily the key that is being pressed at the time.
> I need to be able to tell if a key is being pressed or not being pressed at the time the function is called.
> I managed to find a memory location (521 bytes after the keyboard buffer, I think) on my 2meg STE that does the trick: When a key is down the memory location hold the scancode for that key. When no key is down the memory location holds a null byte.
> I can call a function to check the value in this memory location, and therefore detect which key is being pressed, if at all.
> This memory location varies for different TOS versions and different machines!
> I believe there must be a command in BIOS, XBIOS or GEMDOS (or something else) that will allow me to detect a keypress without using a keyboard buffer or repeat/delay rates etc..
> ..or there may be some way of finding out where the memory location (holding the scancode) is for the machine that the program is running on.

I program using GFA basic, but I should be able to call BIOS commands that other languages use. If anyone could help me I would be very grateful. Thankyou.

Dan Jones.

There is a function for it in gfa 3.x. I don't know it right now and
can't find it from heren.
me if you're interested. It is something like KEYPRESS/ (This is for
PRESSING) a key without typing it).
he other way (n is to read the keyboerd input (INP(2) and thenmkl oput
thenm back in the buffer with OUT 2,key& .

ood luck!

I have the following SCSI hard drives priced for quick sale:

Quantum DSP3053L SCSI-2
Formatted 535 Mb
Cache Buffer 512k
Average Seek 9.5 ms
Rotational Speed 5400 RPM $280.00

Maxtor LXT-340SY SCSI-2
Formatted 340 Mb
Cache Buffer ?
Average Seek 12 ms
Rotational Speed 3600 RPM $180.00

Both drives are in excellent condition and comes with documentation.

Reason for selling, moved up to a 4.3 gig Barracuda.

If interested, e-mail me at the address below, or you can phone
860-0302

Thanks..

If I understand it correctly, the Barracuda worked but they
couldn't release it out of copyright problems (realy strange
as there are Hades and Medusa TOS clones) and the Hawk never
worked properly.

Maybe they will release a "Sparrow" one day which would be
deaccelerator based on a 68000 running at 8MHz. ;-)

Hi,

I need to know the following about sysex messages:
Regarding the speed of todays MIDI sequencers (including ATARI based ones): What is a "safe" sysex block length and length of
pause between blocks for those sequencers to work properly with sysex messages. Any "common sense" here?

Any hint is greatly appreciated.

Daniel Weiss

Yup, Get mint with minix or magic with VFAT.
That will work. bye :)
However the desktop from thr ROM can not display the longfilename
correctly.
You woudl need an alternative desktop.
However Magic comes (I believe) with it's own desktop.

>
> Whats on the board, enough for a reveres engineer job??.,

There was a DIY mod available at one time. It's quite easy to do on
a Mega ST, quite a bit more involved on a regular ST. Overscan is
"triggered" at boot-up by a program in the AUTO folder. There is also
a toggle switch for the hardware mod that is turned on before booting up.

It seems to me that the installable boards followed in the wake of
the DIY mod. It should still be available on Atari CD-ROMs and club
libraries.

I'd be interested in seeing what's on the label of that TOS 2.06 disk.

The only TOS that was /sold/ on disk was 0.98 - it came with the very early
520ST models. TOS 1.0 has always been in ROM. All other version are
available /only/ to developers in disk form (legally, at least); end users
can't legally obtain disk versions of TOS. OTOH, copyright law permits you
to make disk versions of any TOS ROMs that you own for your personal use, so
if you need a TOS 1.04 image, for example, buy a broken ST that has TOS 1.04
in ROM and make an image of the ROMs. As long as you own the chips, you're
legal, no matter how you get the data inot the computer.

That would be .shtml originally; beats me what the "s" stands for, but it's
still just html as far as Netscape is concerned, at least. I know Ben
Smith's web page has the same extension and it seems to work fine.

That's very out of date - as a result of being so out of date, it doesn't distinguish between US-efnet and euro-efnet (aka ircnet).

What the original poster actually wanted was a server in the US, but on euro-efnet.

STiK is freeware, that shit isn't. So probably many people will
have use for STiK. Personally I prefer MiNTNet, and it will become
quite confusing when another TCP solution comes to market. Perhaps
someone will do similar GLUE program for it as there is for
MiNTNet.

Btw. does that stuff work with all Ataris and not just with
MagiC OS ?

# 2657. Atari STfm top wanted

Newsgroup: comp.sys.atari.st
Date: 1997-02-07 00:00:00 UTC
From: ccs@netcom.ca
Message-ID: <5dg9cr$4qq@tor-nn1-hb0.netcom.ca>
Source record: 128195

If there's anyone in the Toronto area who's got a dead STfm on their hands, I could use a new top (waddayaknow? Leaving them in the cold makes 'em shatter!). Will pick up or swap for something or other.

Shudder! Atari plagues my life!

Ken "Animation Station" Rockson.

A file with the extension .shtml is essentially an HTML file, but...
It's normally used for 'server-parsed HTML', or a page which uses
something called 'Server-Side Includes'. Simply, an SSI is a cgi program
which is run by the server (hence, server-parsed) *before* the page is
loaded into your browser. The .shtml extension tells the web server that
this page needs to be checked for the SSI before it sends it to you.

Something like Magic Shadow Archiver (MSA) will do that for you, and create images of Atari disks as .MSA files, which you can then stash away on your PC hard drive ;) Check any ftp site for something like MSA2xxx.ZIP.

>| I thought that OLE was a file format,not inter-process comunication.
>|

OLE is a set of predefined interfaces for COM objects to support if
they want to do OLE things.

OLE - used to mean Object Linking and Embedding, now means "OLE"
COM - Component Object Model

OLE is not a file format although some OLE interfaces support a
specific file format scheme that stores multiple streams inside one
file. You can write plenty of programs using COM without ever
implementing an OLE interface.

I used to own an Atari 1040STfm. I still have it somewhere, I think
the floppy drive is dead and it probably has about 10 pounds of dust
in it. It served me very well for a couple of years and then it
couldn't do the things I wanted so I had to buy an Intel clone to get
my work done.

Except the first (and most important) one.

FWIW, Koos Kuil is currently plugging away at making Octopus BBS "8-bit
friendly" (at my request - I still have callers using the 800XL and I think
there's a C-64 user, too). The latest update is always available from his
Web page, and if I can get him out of the C compiler long enough, I'm going
to have him send me the entire package (latest version) to put on my ftp
site.

Up until #3, you were doing fine. <G>

>Is there any alternative or you recommend suicide ?
>
>I've found many other programs (Oasis, NOS, Ice) but I don't want to
>download all and everyone to find that they don't fit the purpose...

Oasis 1.35 is your best bet for immediate usage. It won't allow
graphical Web browsing, but will do all else you listed in "1" above,
and it does allow the use of Lynx to browse in plain text mode. If his ISP
uses POP3 for mail, however, he will also need NOSPOP3 to replace the NOS
that's included in the package.

Give us 2 months and some luck, and there will be at least one other PPP
dialer available that does work with NEwsie and so forth.

# 2668. FS: Atari Computer Goods! Even More Atari Stock! FREE Catalogs!

Newsgroup: comp.sys.atari.st
Date: 1997-02-07 00:00:00 UTC
From: bensmith@kelly.teleport.com
Message-ID: <5dgras$fej$1@kelly.teleport.com>
Source record: 128206
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Check out my Updated Atari Catalogs and find More Atari stuff! I've got Monitors for your Atari 8 Bit like Commodore CM-141 "Like the Commodore 1802" And Disk Drives for the Atari 8 Bit like Stock 1050 and a 1050 Duplicator Drive for Backing Up Software. Plus I've bought out the Game Cartridge Gorf for the 400 & 800 & the Educational Math Game Cartridge Space Journey for any Classic 8 Bit Atari Plus I've cornered the Market on New Copies of Print Shop and some Print Shop related Items! That's Gorf, Space Journey & Print Shop All New Copies, All for the Atari 8 Bit! Plus a Good number of SSI and Avalon Hill/MicroComputer Games, and Many of them are Complete. Plus some Flight Simulator II from SubLOGIC including Scenery Disks all for the Classic Atari 8 Bit. For the Atari ST & newer Computers I've added to my HardWare Catalog Supra Hard Drives, Spectre GCR Mac Emulators, Indus (Future) GTS-100X Disk Drives, Panasonic MultiSync Monitor that does Double Duty for both ST Color and MonoChrome Monitors and the Cable/Hardware to your ST Computer. I've also added Software to my ST Catalogs & revised my prices. Titles such as Brand New copies of Ultima V for those of you Ultima Collectors and for those who like Flight Simulators, theirs F-15 Strike Eagle, F-16 Combat Pilot, Falcon, Falcon extra Missions Disk, Fighter Bomber and Flight Simulator II. In Productivity Software, theirs Data Manager ST, Degas Elite, Easy Draw, MultiDesk, NeoDesk, Revolver & PageSTream. All for the ST.

See my Web Page at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. At BSC's Web Page you can View, Capture and even DownLoad Atari Catalogs or Contact BSC by Web Page! Or Request Catalogs by E-Mail. Do You Have problems connecting with BSC's web page? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Please let me know if I can't attach files to your E-Mail. I'll get back to you after the weekend. Catalogs are sent only by E-Mail. Not Snail (Postal) Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS. The Most Powerful BBS SoftWare on any 8 Bit Computer Platform. For the 8 Bit Atari. Register with Shadow Software to keep the support coming.

I've added to my Web Page an area for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page.

Also, on BSC's Home Page! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Page with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Page. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

--

Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

>
> --Craig
>
```

You can use one of the TOS-dump proggs around to make a TOS-binary image of your ST(E) TOS to a file. Just rename that file to "magic_pc.os" and put it in the root oc your C-drive! That&#65533;s it, and gemulator96demo will run!

If the name the file is "tos.img" you hawe to patch it to a boot disk (file)! And I don&#65533;t now how!?

```

>MTU should be set to 552 (MRU + 40). MRU was obsoleted a few versions
>ago.

Again, you're confusing MRU with MSS. MTU should be equal to MRU, MSS (which
is obsoleted) should be MTU-40, RCV_WIND should be MSS*3.

>I have DFB_SIZE=1024, RCV_WIND=4096, PKT_SIZE=2048 but I'm not sure
>which are now obsolete. I vaguely remember something about having to
>be bigger than MTU. It does no harm to try them - obsolete and unused
>variables are ignored.

DFB_SIZE is obsoleted as well, and PKT_SIZE too. You only need to set MTU
and RCV_WIND.

That should be "GEM.CNF" rather than "MINT.CNF" for MultiTOS users.

>and then MagiC/MTOS will load the desktop automatically. I have it up
>and running now on my TT but I'd sure like to know how to add icons to

I don't have much experience with no|Desk, but last time I looked at it I
believe there was a resource file somewhere containing icons. Presumably
you can just add icons to this resource file.

# 2677. Atari Double Sided Floppy Drive for Sale

Newsgroup: comp.sys.atari.st
Date: 1997-02-07 00:00:00 UTC
From: m4wolf@aol.com
Message-ID: <19970207021700.VAA03093@ladder01.news.aol.com>
Source record: 128306

I have a GTX-100 (from Future Systems) double sided floppy drive. It has a very compact design and includes a digital front panel display that is helpful to monitor disk and formatting activity. Asking price is $35 and I'll pay shipping via UPS.

E-mail me if you are interested

# 2678. Atari / Amiga Mouse Master for Sale

Newsgroup: comp.sys.atari.st
Date: 1997-02-07 00:00:00 UTC
From: m4wolf@aol.com
Message-ID: <19970207022200.VAA03330@ladder01.news.aol.com>
Source record: 128307

I have an Atari / Amiga compatible Mouse Master for Sale.
It allows you to have a mouse and two joysticks hooked up at the
same time and by pressing a switch you change from one to the other
without having to plug/unplug each device. This saves wear
and tear on the computers I/O jack and is a must for those that play lots
of games. Asking price is $25 and I'll pay for shipping via UPS

E-mail me if you are interested

Hi All,

A friend of mine recently had problems connecting to this site:

http://www.craftbrewers.com/
http://www.craftbrewers.com/beer_expedition

When you connect to this site, CAB does a Texas two-step. I get a blank page first, then you get the Web page with an extension like 00000002.shtml

Most of the page loads, but not all as the gif's in wwwcache are missing the gif extension ;) Also, CAB converts the html to sht( uh, no comment ).

The links on the left side of the Web site beer_expedition won't load, just a wwwcache error message. If anyone knows about this new HTML type, please let me know... The beer is a brew'in :)

Charles

m>
m> But I got an error from the Sportster now.
m>
m> Have anybody a ready configuration setting ?
```

No, but I've just been doing the same with my new Hayes Accura!!

The commands on this are completely different to my Sporster 14400, here's the relevant bits, maybe it will help?

```
;
; FaxModem Settings
;
Init ATH0M1L1&D3+FCLASS=2+FAE=1|
Answer ATA|
Fax H:\MAIL\BTFAX.TTP -pH:\MAIL\FAX\ -m -s
;
```

This is with Binkley but it's similar ;-)

It was the +FAE (and not FAA) that was causing mst of the problems here ...

# 2693. PPP on Atari ?

Newsgroup: comp.sys.atari.st
Date: 1997-02-08 00:00:00 UTC
From: STigma@not.here
Message-ID: <MPG.d65e2b59a52baf99896ea@news.redestb.es>
Source record: 128215

Hi !

My brother wants to access the internet with his Atari STe (4 MB Ram and Hard Disk) and before searching the net I've found that STiK needs a SLIP connection. :-(

As his ISP provider only accepts PPP connections, I searched again looking for any program that support this protocol and found a file (PPPKIT14) by Abel Philippe (p-abel@imaginet.fr), but don't know if this package will serve with other programs for e-mail, news or ftp.

So, here's the problem:

1- He wants to access mostly e-mail, news and ftp, www browsing it's not among his most urgent needs

2- He has to do it via a PPP connection.

3- He is a musician, not a hacker ;-)

Is there any alternative or you recommend suicide ?

I've found many other programs (Oasis, NOS, Ice) but I don't want to download all and everyone to find that they don't fit the purpose...

Any suggestion ?

Thanks a lot
STigma@madnetro.com

Magnum ST

The first experiences.

> Durch die Ank�ndigung, dass die Magnum ST nun bei aixit lieferbar ist
> wurden etliche Karten an Leser der Atari Gruppen verkauft. Einige
> Karten wurden in Aachen in diverse Computer eingebaut.

By the announcement that aixit sells Magnum ST, serveral cards were sold to
Atari newsgroup readers. Some cards were build into computers in Aachen.

> Folgende Erfahrungen sind sicherlich von breiterer Interesse:

The next experiences are of common intrest:

> Wodurch unterscheidet sich die Magnum ST von der Karte,
> die der Software Service Seidel anbietet?
> Durch nichts. Es handelt sich um das gleiche Produkt vom gleichen
> Entwickler.

What is the difference between the Software Service Seidels card?
There is non. Both cards are from the same developer.

> Wie wird die Magnum ST eingebaut?
> Die Magnum kann auf oder unter den Prozessor gesteckt werden. Dazu ist
> es notwendig, das entweder der Prozessor gesockelt wird oder das ein
> Sockel auf den Prozessor aufgel�tet wird.

How to build in the Magnum ST card?
The magnum ST card is plugged on or under the processor. So the processor has
to be socketed or a socked has to be placed on the processor.

> Sind weitere L�tungen im Computer erforderlich?
> Es muss noch ein Kabel angel�tet werden. Die Stelle an die das Kabel
> angel�tet weden muss ist f�r alle Computertypen in der Anleitung
> abgedruckt.

Is more soldering in the computer needed?
Only on cable has to be soldered. The point to which to cable has to be
connected is for every computer type printed in the manual.

> Muss an der MMU/GLUE gel�tet werden?
> Nein. Ausser dem Sockel und dem einen Kabel sind definitiv keine
> weiteren L�tungen erforderlich.

Is there any soldering to be done on the GLUE/MMU?
No. Except for the socket and the cable, definitly no further soldering is needed.

> Welches Betriebssystem wird ben�tigt?
> Auf der Magnum ST sind Fassungen f�r TOS2.06 vorbereitet. Es
> empfiehlt sich eine eventuell vorhandene TOS-CARD zu entfernen und die
> EPROMS einfach auf die Magnum zu stecken. Die TOS-EPROMS geh�ren nicht
> zum Lieferumfang dazu. Anwender von MagiC ben�tigen keine TOS2.06
> EPROMS.

Which operating system is needed?
On the Magnum ST sockets for TOS 2.06 are prepared. It's adviceable to remove a posible existing TOS-card and to plug the TOS-EPROMS into the Magnum card. Magnum ST doesn't come with the TOS-EPROMS. Magic user don't need TOS 2.06 EPROMS.

> Wie wird der neue Speicher erkannt?
> Im Lieferumfang befindet sich eine Diskette mit einem Progr�mmchen f�r
> den AUTO-Ordner. Das Programm erkennt die Magnum, erkennt die Gr�sse
> des eingesetzten SIM Moduls und meldet den Speicher nach dem Test
> beim Betriebssystem an.

How is the new memory detected?
The card comes with a diskette with programs for the auto-folder. The program recoginces the magnum, detects the size of the used SIM modules and after testing the memory is 'announced' to the operating system.

> Kompatibilit�t Magnum ST % HBS240
> Es gibt keine Probleme. Da der HBS240 nur die unteren 4MB cached wird
> der Speicher der Magnum leider nur mit der normalen ST-RAM-
> Geschwindigkeit genutzt. Aus Stabilit�tsgr�nden sollte die Magnum auf
> den HBS gesetzt werden. (Der HBS240 ist recht gross wg. der
> konventionellen Bauweise). Der mitgelieferte Sockel gen�gt. Es werden
> keine zus�tzlichen Bauteile ben�tigt.

Compatibility Magnum ST and HBS 240.
Thare are no problems. Unfortunately the memory of the Magnum card is used at normal ST ram speed because the HBS240 is only cached below the 4Mb. For reasons of stability the Magnum card has to be placed on the HBS. (The HBS 240 is quite big because of the use of conventional IC. The included socket is enhough. No extra elements are needed.

> Kompatibilit�t Magnum ST % HBS640
> Es gibt keine Probleme. Da der HBS640 bis zu 12MB cached wird der
> Zusatzspeicher bis maximal 8MB gecached. Optimal ist in diesem
> Zusammenhang eine Magnum Karte mit 8MB. Die 8MB Magnum ist sowieso die
> vom Preis/Leistungsverh�ltnis beste Version. (Maximaler Speicher ohne
> Verlust).

Compatibility Magnum ST and HBS640
There are no problems. Because the HBS 640 caches 12MB, the maximum cached
aditional RAM is 8Mb. This is optimal with a 8Mb Magnum card. The 8Mb is gives
always most bang for the buck. (Maximum memory without loss.)

> Kompatibilit�t Magnum ST % MULTIBOARD
> Die Kombination aus Magnum und Multiboard ist nicht sinnvoll.

Compatibility Magnum ST and Multiboard
The combination of Magnum and Multiboard is useless.

> Kompatibilit�t Magnum ST % TOS-Karten
> Die Magnum ist nat�rlich in der Lage mit einem TOS2.06 auf einer TOS-
> Karte zu arbeiten aber es ist sinnvoller und sicherer die TOS-ROMS auf
> die Magnum zu stecken und die alte TOS-Karte einfach zu entfernen.

Compatibility Magnum ST and TOS cards
Ofcource can Magnum ST function together with a TOS 2.06 card, but it's more
usefull and saver to plug TOS 2.06 into the Magnum card and remove the old TOS
card.

> Aktuelle Preise f�r die verf�gbaren Atari Speicherkarten:

: Is there a way to have an extended file system on my ATARI MEGA2 TOS102(such
: as THIS.EXAM.PLE instead of THISEXAM.PLE)

Well, you could either get Magic which uses the Windows 95 VFAT filesystem (crap, crap, very crap) or you could get MiNT with Minix and have a proper filesystem which is very, very fast. Both offer long filenames. Magic costs money, whereas MiNT and Minix can be downloaded from any good Atari FTP site.

Cheers,

James Cox.

: #exec \bin\sh.ttp \etc\rc.net
: exec \bin\syslogd
: #exec \bin\inetd
: echo Now booting MiNT.

: Any answers yet?
```

I had to change the following line
exec \bin\ficonfig lo0 addr 127.0.0.1 netmask 255.255.255.255 mtu 890 mru
850 up
So now the pppd could set up the ppp connection. It worked too. But then I
came to the following problem:

After selecting the ppp conn. my provider asks for an PAP routine.
I found out that its possible to configure pppd with +ua user athome
But from there I got stuck.
What more commandlines do I have to add to the list?

Do I need to set up the ppp/pap-secrets and ppp/chap-secrets properly?
And what sort of setup do they have to be, because the manual is not that clear about that.

I presume that then the ppp connection is routed to the cab program. If you want to use other STIK connected programs can they work as well?

I've tried out a dip script as well but got stuck at the connection between the slip connection and the network. Anyone got neat tips about that?

Is there any documentation about this?

And if you like a nice gadget in your mint.cnf file try out this:
exec /c/mint/tga24.ttp /c/mint/startup.tga
(the 24bit tag viewer of the apex2 demo) (a tga pic you can look like the windows95 startup bitmap (or the anti version))

or with xboot:
(make links for xboot.prg (apperently it can use these links))
sln c:/mint/auto u:/auto
sln c:/cpx u:/cpx
sln c:/ u:/acc (tricky one!)

exec /auto/xboot.prg (preferably not the xboot from the c/auto folder)
(with this you can configure the *.prg files)

Then you can add in the /c/mint/auto/ folder all *.prg files you can use with mint
exec /auto/maccel34.prg
exec /auto/drvin.prg
etc.
(INIT=/auto/oldgem.prg)

@Now booting Mint

Enjoy Mint!

# 2698. Last of my ST Stuff for sale

Newsgroup: comp.sys.atari.st
Date: 1997-02-08 00:00:00 UTC
From: falken@tstonramp.com
Message-ID: <32fbe01c.13923790@news.tstonramp.com>
Source record: 128220

I have sold all but the following items for the ST.

SC1224 color monitor.....$100 includes shipping
and insurance.
SM124 mono monitor.....$80 includes shipping
and insurance.
Kraft Trackball.....$15 shipped

Taking any" reasonable offer" on any or all of these, but if making an offer on the monitors you must know that they are costly to ship. They have to be double boxed with styrofoam packing materials. I have been quoted $20 for just the packaging cost alone and shipping should be about $20.. Prices not eteched in stone, but the hardware is in very fine condition with very low hours on the sm124..

Email if interested.

Hello,

Roni Music Home Page offers free down load of the Sweet Sixteen MIDI
Sequencer for Windows and Atari computers.

Sweet Sixteen is a comprehensive and powerful MIDI sequencer for
PC/Windows and
Atari ST/STE range of computers.
Sweet Sixteen offers Piano Roll, List and Transform edit pages as well
as a
dedicated Mixer page you can use for your favourite synthesizer.

Two versions are available:
1. A demo version which is a complete version of Sweet Sixteen with all
file saving disabled.
2. A "lite" version which lets the user save files but certain other
functions are disabled.

Check it out at: http://home1.swipnet.se/~w-11396

double that statement. alex managed to repair my 1040ST after the RAM upgrade blew out my MMU chip. and of course in doing so, caused a number of other problems. but anyone who can de-solder that mmu socket, (and replace it with a newer gold plated contact socket) is pretty damn talented. i'm the lucky owner of a rare (really rare) atari "15,000 different configuration motherboards" computer. kinda makes things a pain when you're new to the world of atari.

dear all,

i bought my 1040STfm for the sole purpose of using it as a sequencer. i've upgraded the ram to 4 megs, and have TOS v.1.4. i'm taking a trip to toad computers soon (i know, they don't do this, or that, or whatever. but when you go there, all the software and hardware is about 30-70 percent cheaper than the advertised price) and would like to know what software packs i should pick up. i'm looking for an AFFORDABLE (probably NeoDesk) desktop, disk utilities, and a decent HD driver. also, anything that would make re-draws faster. (i believe warp 9 does NOT like music software.) oh, i'm using Cubase Score v.2.6 and my hard drive is a megafile30. i'd like to stay in the $40-$50 range. (last time i went, they were selling NeoDesk v.3.2 for $2.00. didn't know what it was, so i didn't buy it. now i'm a bit more acclimated.) finally, any PD programs that I MUST have. i have gone through the whole library at umich, and would like to know which programs are "essential." thanks bunches. i really appreciate it.

drum and bass,

chrisTiaN

Yeagh, It is Impossible for any of the current emulators to "allow
normal usage of all" ATARI software, Gemulator would seem to be the
closest thing to an ST, easilly beating TOSTOWIN and the rest IMHO,
But still not good enough to be a replacement, The only hardware I can
think of is the rom card for the Gemulator?, even then it will NOT
perfectly emulate an ST........

Granted, very, very fast machines. However, you must
admit yourself that TOS 3.06 is far different than 4.04:)
But that is a topic discussed long ago:). If there indeed
ever were any Hawks in the field, they must have been locked
in a vault with no contact the outside world:) Eighty units
was the rumor. Were they all screened by the Secret Service
before being allowed to beta:). You can follow a pre-press
release only so long........

>
> Maybe they will release a "Sparrow" one day which would be
> deaccelerator based on a 68000 running at 8MHz. ;-)

As a matter of fact I am looking for a good deal on a
Sparrow:). I have had one reply to my WTB add, but Yannis
didn't think it was worth while to ship it to the U.S. :(.
The Hawk board I had seen at Sacramento last year looked
nice, but again it wasn't installed in a Falcon.
I just wish we could get a few Afterburners shipped over

here to the U.S., along with a few Expose cards and Nemesis boards. Wouldn't mind having MagiC Mac 2.0 either. How about a few copies of Neon Grafx. A PowerUpTT would be nice for my TT (yea, I bought another) as the Cattamaran dosen't work well with all machines. How about a fast ram card for the FX. Damn, seems that all the Screen Eye Plus versions were sold out before I even read about them. Has Papyrus 4 made it across the ocean yet? Where is that new version of Overlay Hypermedia from Overscan? Did the Eagle ever sell in the U.K by Gastiner? If so was the 040 card ever made available. Last time I tried them my mail bounced. And, whatever the hell became of the Heatseeker?

# 2707. NVDI 4 / SpeedoGDOS help please...

Source record: 128229

Hi all,

Having got CAB/Stik set up on my 1040 STf (4Mb) running with my SM124, I would like to see a better display of screen fonts/graphics etc.

Now, I have GDOS but am I right in thinking that NVDI 4.x is needed for Vector fonts? What about SpeedoGDOS? does this handle vectors?

Where can you buy NVDI from in UK? Anyone selling s/h?

And, are they any shareware options?

ALSO, is there a graphics card update for the standard mono setup?

AND FINALLY! does the serial port update improve speed of WWW browsing that much? I notice that a lot of local processor time determins the output speed, you know 'Downloading image/Converting image'

Cheers all.

Mark

# 2708. AutoSwitch Overscan

user (STigma@not.here) wrote:
: Hi !
:
: My brother wants to access the internet with his Atari STe (4 MB Ram and
: Hard Disk) and before searching the net I've found that STiK needs a SLIP
: connection. :-(
:
: As his ISP provider only accepts PPP connections, I searched again
: looking for any program that support this protocol and found a file
: (PPPKIT14) by Abel Philippe (p-abel@imaginet.fr), but don't know if this
: package will serve with other programs for e-mail, news or ftp.
:

The PPPKIT14 should work with the following...
CAB for web browseing...
Ant Mail for POP and smtp Email...
Telnet 1.00 for telnet sessions...
Newsie for News Groups and Email...
MG-FTP for ftp sessions...
I beleive there are three IRC programs for STik/GlueStik now, but
I've not tried any of them...
Forcast for accessing weather servers...
Finger for fingering...

You will need a package called Glue Stik to use these with the
PPP Kit metioned above...it might come with it?

You will also need the CAB for Mint-Net Overlay...

Perhaps someone can help give locations where this stuff can
be downloaded...as I'm at work and don't have my index stuff
handy...sorry.

```
:
: That would be .shtml originally; beats me what the "s" stands for, but it's
: still just html as far as Netscape is concerned, at least. I know Ben
: Smith's web page has the same extension and it seems to work fine.
:
```

Hey guys...I'm speculating here..but I belive that on linux based ISPs, each user can have a directory called www, and from this directory, you may name one file with the extension .shtml and it will become the default file downloaded if someone requests an url with your user name. I.E. http://www.ebicom.net/~bjr

This might not be correct...I just remember a read-me file that came with my ISP stating that one should name the default web page in their www folder, "Index.shtml", yet every other reference to to a document in this message was labeled with the html extension. Perhaps the s tells the server to tell your browser something about itself...I've no "true" idea.

From: Larry Koenigsberg <larryk@efn.org>
Message-ID: <5di7pa$1r7@haus.efn.org>
Source record: 128234

I have owned this printer for years as part of my Atari ST. (I believe it is a Mannesman-Talley printer because the ribbons I buy for it are M-T compatible.) I recently purchased a PC-compatible and am trying to connect this printer to it. To my dismay, I can print to it from DOS, but the Windows 3.1 generic text-only printer driver chokes and tells me that the connection to the printer is bad. Do you have any suggestions as to how I can make Windows talk to this printer, or how to contact Atari to see if they can suggest anything? Mannesman-Talley seems to have gone the way of all flesh, judging by the minescule presence of that name on the Internet.

Please email any response directly to me (larryk@efn.org) as I am not a regular at CSAS -- thanks.

Are you into HOT CHAT? We've got the world's largest voice-personal dating system, as well as the hottest, sexiest "1 on 1", "2 on 1", and "PARTY-LINE" chat you'll find anywhere, all in one place! And you don't have to call a 900 number to get in on this hot phone fun!

You can choose from 5 hot programs that are sure to fulfill your every desire!

You can press 1 from the main menu to choose from our sexy "1 ON 1" PLEASURE MENU, then:
*to talk to a BEAUTIFUL SEXY GIRL, press 1.
*for a 1 on 1 session with an experienced DOMINANT MISTRESS, press 2.
*for steamy talk with a LUSCIOUS TRANSVESTITE, press 3.
*for an erotic 1 on 1 chat with an EXOTIC TRANSSEXUAL, press 4.

*for some man to man action with a HOT GUY, press 5.
You'll be billed just $3.99 per minute for your selection.

Or you can press 2 from the main menu to DOUBLE YOUR PLEASURE, then:
*to speak to 2 HOT SEXY GIRLS, press 1.
*to get it on with a swinging WILD COUPLE, press 2.
You'll be billed just $4.99 per minute for your selection.

Or you can press 3 from the main menu to join the GROUP ORGY LINE!
*You can party with the nations nastiest swingers for only $2.50 per minute.

Or you can press 4 from the main menu, then:
*Press 1 to join the FANTASY NETWORK. This is the world's only phone service that allows you to connect with people who share your personal fantasies. This state-of-the-art voice mail system lets you listen to messages from beautiful girls, sexy transvestites and she-males, gay and bisexual males, and dominant women. Leave them a hot and sexy message, then call back to see what erotic message they have left for you. You'll be billed just $3.50 per minute.
*Or press 2 to listen to a hot selection of recorded fantasies steamy enough to make you explode! Choose from beautiful, sexy women's fantasies or domination stories. You'll be billed just $2.49 per minute.

Or you can press 5 from the main menu for the HOT AND NASTY DATELINE, where you can listen, and respond, to voice personal ads from hot horny girls in your neighborhood, including their real names and home telephone numbers! You can also leave your own personal message for people to get in touch with you. Make new friends on the world's busiest voice personal lines! Meet singles or couples, gay or straight; you'll be billed only $2.99 per minute.

***JUST CALL 1-800-756-3906 to use your Mastercard, Visa, or American Express card. The charge is just $2.49-$4.99 per minute, plus a 50 cent connection fee. 18+ only.

***OR CALL 1-900-745-4398. The charge is just $2.49-$4.99 per minute. Must be 18 years of age or older.

Call now!!! YOU WON'T REGRET IT!

>> Whats on the board, enough for a reveres engineer job??.,
b>
b> There was a DIY mod available at one time. It's quite easy to do on
b> a Mega ST, quite a bit more involved on a regular ST. Overscan is

The commercial version of Overscan has the ability to automatically switch resolution according to a text file that is prepared in the light of experience in order to cope with those older progs that don't know about other than the 3 standard screen sizes, the resolution change is clean, ie doesn't display a garbled screen with flyback pulses etc visible. The driver software also has the TOS1.4 patches built in, as well as a working environment path. Its one big failing is that the switching facility is disabled under MagiC, however it could be argued that progs that don't run uner the larger screen are probably too old to be of use! (g)

I haven't tried the PD version of Overscan (which was a simple circuit, but would imagine that it suffered from the "dirty" res. change as described.

A later development of Overscan is LaceScan, I have one fitted ATM but it too suffers from the "dirty" resolution change, which does clear once you run a prog, that is if you can read the screen to find one! (g)

## 2727. Linux on the Falcon...

Newsgroup: comp.sys.atari.st
Date: 1997-02-08 00:00:00 UTC
From: "Jon Hull (CS)" <hull@eng.usf.edu>
Message-ID: <Pine.GSO.3.94.970208161437.4316B-100000@suntan>
Source record: 128249

Hello, all. I have a Falcon with TOS v4.04, 4M RAM, int. 65M HD, ext. 530M, and 68882 FPU. I would like to install Linux on my machine so that I may begin understanding a UNIX system better with the hopes that sometime I'd be able to program for them. I have tried to install Linux once before, but have had no luck. I would like to inquire as to where to download it from, which source and/or binaries I'd need (and how to uncompress them and compile them), how to install it on a TOS-based machine, and of course which software I'd need to install to use the OS properly... Any help would be greatly appreciated...

-Matt DeJonge

My Lattice C says the same thing, but it is version 5.6. In fact, on
one side of the box is a sticker which indicates that it is Version
5.6, even though the rest of the packaging etc., indicates 5.5.

>shipping it back.

Hi Mike. So still Atari-ing it. Good to see. I've missed past couple
of club meetings buy hope to make the next one.

Anyway- yes the manuals for 5.5 and 5.6 are the same (saying 5.5 on
the front of them.) But when you load up the software - under info
you will see the version is 5.6. I thought there was an addendum
manual that came with the 5.6 set but I think maybe it was the readme
file on disk. My disks have 5.5 on them and I forget if I wrote over
the 5.5 to make it 5.6 of it they did it - its in pen. The read.me
file on disk one will clearly state C5.60

Have fun with lattice. ITs a fairly powerful and good compiler. Wayne

>replace every blank space in the line in question.

The usual solution is to click Show Tabs then click on the Tab Bar
(at the head of the column you are working on) wherever you want a
new Tab Stop to be. See the manual, page "Tabs" (5.5 in my version).

: Daniel Klugh wrote:

: > Since MS-DOS is the only OS of it's kind,TOS obviously ripped it's DOS and
: > system call interfacing style off of MS-DOS.
: When IBM went to MS to write an OS for their new PC, MS had no
: experience of writing an OS and very little time. They bought a CP/M
: based system called QDOS from Seattle Computers and used that as the
: basis for MS-DOS. It is not a coincidence that MS-DOS and CP/M are so
: similar. MS-DOS is not and never was original.

: > TOS's system calls are obviously set-up to look like MS-DOS ones just as
: > MS-DOS's original system calls were made to be analogues of CP/M-80's.
: > (CP/M-86 came out long after MS-DOS was first created)
: > And the DOS ("file system") could only have been stolen from MS-DOS.
: > No other computer (PC) would use such a useless DOS.

: It is a matter of record that GEM was originally created for the PC and
: therefore would use a compatible file system. Atari used GEM because it
: already existed and was therefore cheaper and quicker than creating a
: new OS from scratch. Allegedly the file system in TOS is based on
: MS-DOS 3. However, since MS-DOS is based on QDOS, which in turn is
: based on CP/M, created by Digital Research, the originators of GEM,
: there is a kind of natural justice there. TOS's file system is NOT
: original (nobody ever claimed it was) but then neither is MS-DOS's (and
: that they do claim.)

What is MS-DOS's file system based on?
Certainly not CP/M,I used that and it works totally differently.

QDOS is a analogue of CP/M.It used 8086 and CP/M a 8080.Programmes are
totaly incompatible.Just like how MS-DOS 2+ system calls are analogues of
UNIX.

: d> The Atari also kept the OS in ROM.

: Of the 8-bit machine? Yes, ISTR that was necessary for those who only had a

What's a ISTR?

: cassette (single-sided floppy disks were expensive and rarely owned). The
: disk OS (DOS) was software only.

Of course it was software?What else could it be???

: d> It's just that the original OS was out there for everybody with a
: d> modem.

: Partly because DOS 3 was so crap that they had to reintroduce DOS 2.5 IIRC
: -they did it to stop all the complaints AIUI. That partly explains the
: attraction for replacement DOS's as well.

I fail to see your point.DOS 3 and DOS 2.5 worked with all versions of the OS.
You would not have to use a old "compatibility" OS if you wanted to use
2.5 in favour of 3.
You had to use the old OS for old games.
Just like you have to use the old TOS for old games.

: d> The ST also stores DOS in ROM (but aren't there alternative DOSes that
: d> you can load. There must be if you want to read a CD).

: All manner of utilities are available to patch the OS by intercepting (not
: relocating the original) OS calls to replace them with better alternatives.

: They're implemented using the Auto folder, usually.

: DOS (Disk Operating System) is an outdated term with the ST, though. GEMDOS
: is only one part of the OS on the Atari ST, along with BIOS, XBIOS, GDOS
: (TOS) and the AES and VDI (GEM). GDOS (the Graphical Device Operating
: System) has *always* been a software extension and people have been replacing
: it almost from the outset (NVDI, G+Plus, AMC etc). There's replacement VDI's
: (NVDI), replacement AES's (MagiC, Geneva, N.AES) et al.

Technicaly,DOS isn't part of the OS.But,as I remember,MS-DOS and CP/M
device drivers can't take filenames,so DOS is simply hacked into them.
I have no idea about devices taking filenames on the ST.

: The very first ST's (before the STF or STM and certainly before the STFM) had
: a disk loadable TOS, but the number of machines we're talking about here is
: minimal - certainly before mass-marketing of the ST, when it reverted to TOS
: in ROM.

: There's little point in a replacement single-tasking OS, but those like MagiC
: can run single-tasking just as well as co-operatively multitasking or
: pre-emptively multitasking.

Of course there is,you want to keep up with the latest features.On the
opposite,you want to keep the old TOS around for games.

: Device dependent drivers required to access hard disks or CDROM's are also
: readily available (ICD, HDDriver, CBHD, SCSITools, Extendos etc). These add
: features to the built-in BIOS rather than replace them AIUI.

I don't know if I include disk device drivers as a part of DOS.On the
Atari,all devices were accessed in the same way.(even PBI devices)
On machines like the Apple,DOS also includes the programme to operate the
disk controller.If you ever got a memory upgrade(for a RAMdisk) or some
new kind of drive,you needed to run that company's version of DOS.
ProDOS put a end to that.
But most other machines have device independance so DOS can access your
new disk drive like any other disk drive.
(though in MS-DOS,you need to load up a special device driver for anything
other than a normal hard disk drive or floppy drive,since all
hardware devices are accessed in unique ways)

: Does that answer your questions?

I don't think I asked a question.I just said that TOS and DOS are stored
in ROM.(I assume that DOS is built-in to TOS;what if you need to access a
CD drive?)

: Here comes my enormous sig again... <g>

Damn BBS ad.That belongs in the "Organization" header.

# 2737. Atari Stuff-For Sale

Newsgroup: comp.sys.atari.st
Date: 1997-02-08 00:00:00 UTC
From: dfangmann@msn.com
Message-ID: <01bc163d$c526c600$021d2399@itjfvkli>
Source record: 128259

Following for sale:

MEGA STE/4MEG(removable SIMMS), TOS 2.06, 52MEG internal Quantum, Golden Image cordless trackball, Atari Mouse,
asking $250. With AlberTT VGA card, $350.

SLM804 Atari Laser, recently changed drum, works great with Atari Works!, asking $150.

SC1224 Atari Color Monitors, refurbished $55(original box); used $45(good condition).

PCM124 Atari PC Monitor, new, 9pin connector, original box, asking $55.

SCSI TOWER: 85meg Seagate HD, Sony CDU-541 CD DRIVE, ICD 155MB tape drive(5 extra tapes), 540 meg FUJITSU(new) HD, 50meg Seagate HD(new), 50meg SeagateHD, 6 SCSI devices in all, wired together in one new case with powersupply/fan with single output to LINK 2 SCSI Adapter, included with cable: recently constructed asking $600

Tower will boot automatically to any ST/STE without internal hard drive. Full instructions to install to MEGA /ST/STE/TT with internal hard drive. ICD driver software, tape backup software and ExtenDOS pro included!

1040 STF's, 1 meg, good used condition, tested, $65.

Plenty of software with original box/docs to be sold soon!

Jaguar Game System with CD Player, 2 controllers, Raiden, Highlander CD, Braindead 13 CD, Tempest 2000 Soundtrack CD, Blue Lightening CD, MYST Demo CD, Vid Grid CD, like new, asking $150.

Buyer pays shipping costs. Ship via UPS COD to USA and Canada ONLY!! Dan F.

# 2738. Re: NVDI 4 / SpeedoGDOS help please...

>Hi all,
>
>Having got CAB/Stik set up on my 1040 STf (4Mb) running with my SM124, I would
>like to see a better display of screen fonts/graphics etc.
>
>Now, I have GDOS but am I right in thinking that NVDI 4.x is needed for Vector
>fonts? What about SpeedoGDOS? does this handle vectors?

SpeedoGdos is the Vector version of GDOS which uses Speedo fonts.
However NVDI also supports Speedo fonts, Truetype fonts and enhances
screen redraws by 200-350% and all for a lower price, unsurprisingly
I chose NVDI!

>Where can you buy NVDI from in UK? Anyone selling s/h?

System Solutions, phone 0181-693-6936 or 01753-830344 I think it's
around 50 quid.

>And, are they any shareware options?

Nothing that I know of.

>ALSO, is there a graphics card update for the standard mono setup?

I don't really know what advantage a graphics card would give on a
mono display, i doubt the atari monitors can handle any other
resolutions, if you are talking about screen update speed then your
best bet is to upgrade your processor, again ask SS.

>AND FINALLY! does the serial port update improve speed of WWW browsing that
>much? I notice that a lot of local processor time determins the output speed,
>you know 'Downloading image/Converting image'

With the RSVE serial port module I can't really say that I have
noticed higher speeds or anything as I always use 33,600 but with NOS
I find that by going above 19200 I actually lose speed so I'm not
really sure if it is a wise investment, the new CAB (hopefully
released in the near future) is quite a fair bit faster especially
with tables so I'd wait for that before you decide to do anything
else. I'm sure the RSVE is a perfectly good modification but you
probably need something with a bit more 'bite' than a 8mhz 68000.

In windows and win95 I have found the same to be true. Sometimes I
have to use dos to find something or delete something if windows is
being picky.

## 2740. Downloading files

Newsgroup: comp.sys.atari.st
Date: 1997-02-08 00:00:00 UTC
From: Dan Cox <village1@lightspeed.net>
Message-ID: <32FD7BC5.7228@lightspeed.net>
Source record: 128262

Ok, say I download a file for the st with my IBM compatible. Now I
want to transfer that to the atari. How do I do it? My st has a 360k
floppy drive. Apparently you can only format a 5 inch disk for 360k in
dos. You get the idea I think. Any advice would be appreciated.
Thanks
dan

## 2741. JagMag in German?

I'm a muso, too, and in fact, studies have found that musos make great
computer programmers, due to the similar thought processes involved! :))
For email, news, ftp, but no www browsing, your brother should use
Oasis1.35e. It works extremely well, works offline to keep your costs down. I
use it on a daily basis.

In <5di3v4$m7u@einstein.ebicom.net> Brian Roland wrote :

>: That would be .shtml originally; beats me what the "s" stands for, but it's
>: still just html as far as Netscape is concerned, at least. I know Ben
>: Smith's web page has the same extension and it seems to work fine.

Generally the default filename if not specified in the URL is
"default.html" (CERN HTTPd) or "index.html" (NCSA HTTPd) IIRC.

The 's' in "shtml" generally signifies that the file is "parsed HTML",
where the file is parsed by HTTPd and certain commands in the file are
executed and replaced with a string by HTTPd. This allows for, for example,
text counters which work when the reader has images turned off (as opposed
to image counters that only count when the reader loads the image).

Parsed HTML is also used for a variety of other purposes. For example, I
could have used parsed HTML to have a "count-down to next meeting" or
automatic updating of the next meeting date on our Tariland club WWW page,
except that my ISP doesn't allow users WWW pages to have parsed HTML.

Under the "Help with HTML" section under the "WWW Links" section of my WWW
page, you should find links to a few sites demonstrating the use of parsed
HTML.

: Dunno the name that precise though. ???525g.prg (or something like that)
: Should be in any mayour ftp site. (atari.archive.umich.edu or ftp.cnam.fr)

Hmmmm... Well, it wouldn't be very cost effective to go the CAF route just
to get this one little funtion (unless some kind person wants to give me
CAF :-). Seriously, I'll take it!

And as for the 525 prg... well, I have the latest version (english BTW)
called 525_v213.zip and it does not split stereo files into 2 mono ones.
Worse than that, the 525 prg eliminates the 'loop' info from the header
for some strange reason and readers only the sample data.

Still looking and listening... anyone else have any ideas?

Thanks,

Hello,
My name is Will Fisher and I am setting up a new e-zine on the web for people who love emulators. This e-zine, called EmuZine, will focus on specific
emulators, the platforms they run on, and what emulator is the best in it's class of emulation.

The reason for this message is that, like any e-zine, we need people to help write articles, and to provide ideas for the e-zine. As this is a non-profit e-zine all submissions must be donated. All submissions become property of EmuZine and will not be returned, once a submission is accepted EmuZine will e-mail you for permission to 'publish' your article on the web.

EmuZine is also looking for a few 'permanent' authors for the e-zine. These people will have the distinction of having their own spot each and every
'printing' of the e-zine. I am looking for one such person for every major emulated platform. This post would not be 'for life' as such, you would hold
the post until you either got tired of it, or wanted to give it up to someone
else. EmuZine also has the right to transfer the post to another person at any time, without warning (but we would NEVER do that, except in very serious
circumstances).

What is good is any e-zine without some illustration? If you are an aspiring computer graphic artist or if you've been doing it for years we would
love the chance to use your illustrations in the e-zine. You would, of course,
get full credit in EmuZine. If you have a comic, or would like to create one,
that focuses on computer usage, or hopefully on emulators, we would love to add it to the e-zine.

If any of this sounds interesting to you please respond to this message via e-mail as I do not read all the NG's this message was posted to. This message is in the comp.sys.{any emulated system} to reach the maximum of
interested people.

Thanks for your time,
Will Fisher

Nah, I think Frank Charlton gave a more plausable explanation of the
shtml extender in this self same newsgroup :-) I think you are
confusing the Index. bit with shtml. On my server, zetnet, we were
told to name our home page index.htm or html or, I suppose, shtml as
long as it is called index it will be loaded first :-) I could be
wrong also, hey I usually am!! but it gives me a reason to waffle on
at great length :-))

So you are simply guessing then. It doesn't use DOS, it does have *A*
DOS however but if you need to use disks then you need one obviously.

What I am saying is "You don't seem to have ever seen an ST." Not hard
really.

>: >Just look at the similarity of the 2600 to the Atari.
>: Meaning?
>

>It means what it says.
>The ST looks like it's made by a different company.Does it even have
>player/missle graphics?
>(i.e.sprites)

You want all machines by a single company to all look the same? Th
readon that it looks different is that it's got a PSU in the case,
it's got a keyboard and diskdrive and it's also a computer not a
console, hardly surprising really especially when you had that many
years inbetwwen to 2 products.

## 2756. New Products from ORA

Newsgroup: comp.sys.atari.st
Date: 1997-02-09 00:00:00 UTC
From: ebaiz@qtm.net
Message-ID: <5dki3m$78v$1@news2.qtm.net>
Source record: 128082

Oregon Research will be coming out with some new products for Atari computers. TermiteTCP (I think that is the name) will allow PPP connection to the Internet. I heard ORA is working with the CAB people the will allow it to work with this program. Also, ORA is going to release a new web browser for the Atari's. Both programs are ports from the Amiga versions. The web browser is due out in April while the Termite should be released very soon.

It seems like you either have the wrong printer driver installed or the
dipswitch settings on the Canon are out of sync with the driver.

## 2758. Protext v6.7 release

Newsgroup: comp.sys.atari.st
Date: 1997-02-09 00:00:00 UTC
From: tparrett@parrett.fast.co.za
Message-ID: <855499442_OASIS_@parrett.fast.co.za>
Source record: 128084

I have been advised that Protext v6.7 is now available for the Atari. The letter I received from the developer mentioned Atari ST and TT but was silent on the question of compatablity with the Falcon. Before I part with the cash (50.00 UK pounds + p & p) I wonder if any UK users have taken the plunge. The specs look pretty impressive( including scaleable fonts) so I'm keen to buy but am hesitant given the cost and distance from the supplier. Thanks

:
: >I have seen posting mentioning 2.5" drives sobstituted for the original
: >3.5" drives in Mega machines and TTs. What does it take to do that?

Hi folx,
It is my understanding that most any 2.5" SCSI drive can
work with these machines...you'll need a standard SCSI 2.5 to 3.5
adapter kit which includes a mouting bracket (specify what size bay
to want to put it in...3.5 or 5.25), and proper SCSI conversion cables.
It is a good idea to choose drives that allow the user to ebable or
disable parity...as some Atari SCSI hosts do not like parity.
These kits usually fall in the $20.00 ball park range, and can
be purchased from most any PC mail order or retail outlet.
I have not tried this personaly...but SCSI is SCSI...your biggest
problem may be "if" the smaller drives use a different size cable...
and getting power to the drive since alot of the 2.5" drives run from
termination power rather than having a special cable running to the power
supply. At any rate...you should be able to get this combo to work...

: I would also be interested in this info..and which 2.5 drives
: fit and work in a falcon ?

You can get any IDE or EIDE drive to work in the Falcon...at least
I've not heard of any that don't work yet...there may be limits to
how large a partition can be, depending on which driver software you
use...but they all should work. It's simple plug and play with
an IDE or EIDE drive...a small ribbon cable that plugs right onto
the Falcon mother board. If you don't have a mounting bracket, you
can order them from Toad (and other Atari retailers), or make your
own from light gage metal, a drill, and a good pair of metal cutters or
nibble tool.

SCSI drives should be a similar case to the IDE drives. I've not
tried this...but I believe there is an internal SCSI bus in the Falcon,
I'm almost positive there is one in the C-Lab MK Falcons, and if the
Atari Falcon doesn't have one...I belive Toad has an offer to install
one for you. Personaly, I suggest you get the 3.5" drives and order
or build a kit that will allow you to put this type of drive in the
Falcon. The 3.5 drives usually give you a lot more performance and
space for less cash!

: In windows and win95 I have found the same to be true. Sometimes I
: have to use dos to find something or delete something if windows is
: being picky.

This is why one can/should get a simple CLI for their TOS machine.
There are quite a few out there in free/share ware land that are
quite good "dos or unix" like shells. TCSH is a good example of a
free UNIX type shell that should run on any ATARI ST or better. There are
even versions that work as an ACCESARY for quick instant access to a CLI.

I personaly use NEO CLI which plugs into NeoDesk...it accepts both unix
and dos names for commands...and unlike DOS, allows you to enter user
alias commands for any thing your heart desires!

Since upgrading to NeoDesk 4, I've found very little use for the CLI
however. You can search your entire hard=drive for a wild-card enhanced
file-name in a matter of seconds! Simply open one dialogue, put in
the pattern you're searching for...and before you know it, a window
is open and the file/files you specified are highlighted for you.
Also, you can easily tell NeoDesk to only display files with certian
templates if you desire...to keep down window clutter. It really is
faster once you take a little time to learn how it works.

Windows will do this too by the way...nothing new really.

# 2765. FS Mega4 ST...may split

Newsgroup: comp.sys.atari.st
Date: 1997-02-09 00:00:00 UTC
From: cmoore@cyberport.com
Message-ID: <5dkqq9$ikn$1@macaw.cyberport.com>
Source record: 128091

I may split this up if i have buyers for all the pieces
email with offers if interested.

$150 ATARI Mega ST4, with original box, manuals, clean.

/$225 NEC 3D multisync monitor
\ Omniswitch , switch between all 3 ST resolutions
\ along with sound and floppy ports.

$75 100 meg Micropolis SCSI external 5.25 HD shoebox case with fan.
$75 ICD LINK 2 (led version) SCSI interface, with cable and latest
software.
$50 New Uninstalled (spare) Best Heavy duty power supply for Mega ST.
((enough power to drive internal scsi drive with icd micro scsi host))
$40 Spectre GCR Macintosh system 6.5 emulator, complete, latest version.
( turns the ST into an enhanced Mac plus with 14 in screen
and a 20% performance increase ) uses ST printers to emulate mac
printers.
$50 Super charger IBM emulator, 1 meg RAM disk or PC emulator,
( This turns the ST in to an enhanced XT, with DOS 4.01 and software,
docs.) or the ST can use the 1 meg as a Ram disk.)
$25 External floppy for ST, 720k, 1/2 height,
not Atari (no brand name in it) , much smaller, with cable and power
supply
$10 Wico Command Control Joystick, great for all the flight games below.

loads of free software to someone who buys the system.

# 2768. Falcon Audio Problem, help?

Newsgroup: comp.sys.atari.st
Date: 1997-02-09 00:00:00 UTC
From: frank@SPAMBLOCK_REMOVE_TO_REPLYtachyon.co.uk
Message-ID: <19970209181459275 67@tachyon.demon.co.uk>
Source record: 128094

Hi,

I've now owned 2 Falcons, a TOS 4.01 machine and a TOS 4.04 machine. Since I first got them, they've now *both* developed what looks like exactly the same fault on the audio inputs. That is, both machines record one channel only - the left. The right appears to record an electrical buzz, and nothing else. I've tried more audio leads than you would believe and numerous mics, and the fault always appears.

Has anyone else experienced this? Is it a common fault? Anyone have any idea on either what causes it, or better still, how I can fix it?

Thanks in advance,
Frank.

Compare Win 3.11 with GEM, and compare Win95 with GEM. The look 'n feel
of Win95 is much better. (Haven't you statet that GEM is crap in
Nov/Dec 96?)

>> Command lines still have there place. In Win95, I find I can get alot
>
> I have had my ATARI for more years than I care to recall, and have

I can't believe that you never started a program with the file extension
*.TTP (TOS takes parameters). You will see a dialog box that let's you
enter some parameters (commands) in a line. That's a (very simple) command
line.

If you install a CLI (command line interpreter) you can use the same script files on your atari, MS-DOS PC, or unix workstation.

The command line

zoo a a:archive .

will have the same result on all three systems. It will start ZOO (a packer) and packs the actual directory to disk.

When talking of ATARI and the term "it" is used then surely the
thread is ATARI Computers, people and there use?, If you think the
thread was the ATARI corp', then surely "Only in emulation" is an even
sillier answer as ATARI corp will not appear there?, or do you think
they will :)))

>Only ATARI users. What Tony Smolar like to say is: No new original ATARI
>developments for the TOS system will appear.

That's because ATARI does not exists, as a company?, but ATARI is
alive.......ATARI lives on, If Elvis can be "King" when he is 6ft
under then I am damm sure that ATARI can be alive without the need for
a company bearing the name :)

>>ATARI is alive!
>
>Show me a example of new developments from ATARI Corp.
>I find only clones and emulators.

You can find emulators made by ATARI ? where show me ?

Either you are talking about ATARI not developing (that is an obvious
fact) or you are talking about what ?...I fail to see ?

My point is that the ATARI platform, the user base the whatever! is
ALIVE and people saying ATARI is only around for emulation, in an
ATARI newsgroup is flame bait ?...or as it is more commanly known
around here "Knitting class bait"

Shhhh whats that clicking sound.....

>>>Windows 95, for what it's worth, works very much like GEM on the ST did.

>Nov/Dec 96?)

Yes, it is a well known fact that I don't like GEM, it is not
something I would like to have to deal with everyday, I run my ATARI
nearly every day of every year I have owned it, but very rarely use
GEM :(

But you are trying to put words into my mouth, I never said anything
was better than win or win95, I like win95, I would argue yours and
anyone elses point that win95 is simmilar to GEM, that IMHO is a
pathetic thing to say, Windows95 is simmilar to GEM...is it buggery!!!

>>> Command lines still have there place. In Win95, I find I can get alot
>>
>> I have had my ATARI for more years than I care to recall, and have
>>never used a command line yet ?, just WTF are you talking about ?
>
>I can't believe that you never started a program with the file extension

Well you will have to...the only app I can think of would be some
unarchiver, and since I found the need these there have been shells,

>*.TTP (TOS takes parameters). You will see a dialog box that let's you
>enter some parameters (commands) in a line. That's a (very simple) command
>line.

Yes and My original posting was the truth..BUT I now recall from your
prompting that yes I did once, unpacking some little known archive
format not supprted by current shells hahaha, my mistake,

However it hardly proves the point against does it, I have used my
ATARI for more years than I have used a command line, the original
post made it appear that command lines are the normality on the ATARI,

>If you install a CLI (command line interpreter) you can use the same script
>files on your atari, MS-DOS PC, or unix workstation.

WOW ??????? and ?....:(

>The command line
>
> zoo a a:archive .
>
>will have the same result on all three systems. It will start ZOO (a packer)
>and packs the actual directory to disk.

But why?...winzip supports zoo and everything else, it even decodes
files, why would a command line be needed when a click of a button
will do,

I am suprised at anyone coming into this group and saying anything detramental to the ATARI, it can only be for flame bait, I am suprised at yourself Uwe......The ATARI is not such a Dinasour that it needs to be run on command lines (I said NEEDS) you can happily run an ATARI without ever using one.....

Cheers.............!ynoT

Look for a file called Ghostlink. Does a number with a serial cable
(null modem) that treats the PC and a slave. Can't run .PRGs through
the link, but for data transfer (from HD's and CDROMs) it looks good.
Also the fabled "SneakerNet" is the perennial standby.

Eric

Ok, I'm really bored, is there any docs on how to directly program the
PSG on the 'net? I'm trying to write a player (in GFA basic!) for the .YM
format used by the ST Sound Emulator. I have 'The Atari ST Internals'
page that used to be on Flinnys old STiK page, (where did this go to??)
I've (s)poked around $FFFF8800, but I can't get anything to happen. What
exactly do I do with these addresses??

Thanks for the message Frank, I will be returning to the nets, and as you can see have already started.

The trusty Psion is working overtime linking me to CIX, and using Phils old Mega ST4 I'm now linked back into the net.

As soon as I can get hold of the fido software again I will be returning as a private node under 90:100/106 until (all being well) I get the Falcon back again.

Until that point Kevin Osborne has been nominated as ZC Pro-Tem and is passing on my directives re NeST.

It's the Carpe Diem virus. If you examine your boot sector with Knife ST or similar, you'll find a hidden .prg file in your auto folder that needs to be deleted. Delete Carpe Diem ,turn your system off for a minute or so and reboot, and you should be OK.

Well, the Tramiels, who owned Atari thought it was smarter to spend all
their marketing dollars in Europe. People bought Amigas and PCs instead.

Will it return?
No. Only in emulation.

>I mean who wants to type copy a:example.dat b: when you can just drag
>and drop? It was so much better than the stuff then and now that I
>don't understand why were not all using sts.

Windows 95, for what it's worth, works very much like GEM on the ST did.
Command lines still have there place. In Win95, I find I can get alot
done more quickly by opening A DOS window and typing commands than I
can by searching through directory Windows.

## 2795. STE and hard drive....

Newsgroup: comp.sys.atari.st
Date: 1997-02-10 00:00:00 UTC
From: Alan Swanson <emdu02@holyrood.ed.ac.uk>
Message-ID: <32FF4D09.3485@holyrood.ed.ac.uk>
Source record: 128023

Hi, after following previous discussions about the early STEs and hard drive corruption, I have the following questions.

I have an early STE, serial no A19 B300 53nn, one of the shortlisted with duff a DMA chip. I am getting a hard drive soon from an ex-Atarian with information already on it. Does the corruption affect BOTH the file and the fat?

If so, how do I avoid it writing over anything other than the test file when checking if I have this problem?

Reply appreciated.

ALaN.

Hmm, well, sometimes it will. <G> On this P100, it produced "file not found" until I did a Web search for Zoo - now it says something about "this program has performed an illegal instruction and will be shut down" followed by a really interesting crash of the entire user interface, that followed by a power-off/power-on cycle (as nothing else will restart either DOS or the GUI).

Fixable.

Step 1: email them and let them know it's copyrighted and still commercially
available, and ask them to stop posting requests for copyrighted software in
violation of the law.

Step 2: if it continues, email them a second time with a Cc: to their
psotmaster - and reference your first email, making sure that the postmaster
knows that the individual has been informed that he is breaking the law (or
at leas attempting to - I would think soliciting to commit copyright
violation is jsut as illegal as actually violating the copyright).

Step3: if it still continues, nuke the b*st*rd.

As for what causes it - if it happened with both Falcons, I would seriously consdier getting the INPUT device checked - if you ahd it hooked up to a mixer board or something similar, it would appear that some amount of overvoltage must be leaking into that device's output lines.

Regarding a fix - I haven't looked at the actual hardware, but if you're lucky, it's capacitor-isolated, and you can test the capacitors to see if the left one is open or shorted. If you're not lucky... Well, doesn't System Solutions do repairs?

would have disagreed with you. <G>

Seriously, I saw Atari equipment practically everywhere I went in Germany
between 1985 and 1989. I even saw a 260ST in one store in Ulm. If the
Tramiels had doen that sort of marketing in California, New York, and Texas
at the very beginning of the ST's marketing cycle, the world might be very
different today.

As long as the disks are formated to 720k, the Atari can read them just
fine. And you can use the PC to unzip archives directly onto the floppies
(if they will fit, of course) and save him the time of unzipping them on the
ST. Let's face it, STzip on an 8 MHz 68000 isn't as fast as PKunzip on a
100 MHz Pentium.

>> The Doctor
>
>I'm not sure about that.
>It may be a legal requirement for you to _own_ the ROM's, onve owned
>could you not then use the TOS image from those ROM's?

Two interesting points here - the first is that TOS 3 (which would have to be 3.0x something) won't run on an ST - it needs an 030 CPU. And TOS 1.x is incapable of supporting the TT or Falcon hardware properly. So Herr Klughless once more demonstrates total ignorance of things Atari.

The second point is, he's passing himself off as the "doctor;" doctor of what? Where did he get his degree?

Simply quibbling, don't bother to reply.

Followups set.

From: cb541@cleveland.Freenet.Edu
Message-ID: <5do1m9$6jn@alexander.INS.CWRU.Edu>
Source record: 128034
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st

(This should be in Atari advocacy, but I hang out here and there
isn't any traffic there.)
(Tim S. and Thorsten G. discuss Jaguar, true 64 bit machine
or a 'pretender'. (Pardon paraphrase).)

I am glad Mr. Seufert mentions that the 64bitedness of a
game machine doesn't really mean much. A 32 bit RISC chip
sounds like pleeeeenty to me. And these game machines today
have multiple processors, like the A8. Some for video and
some for digital sound, the machines are fantastic. But, the
N64 hype about 64 bits sorta gets to a Saturn owner, I'd
like to say it's a bunch of BS. I'm sure the N64 and PX are
the 'premier' game machines today and undoubtably the two
will battle it out. I'm afraid I have a 'not in the running'
Saturn as far as hype goes. But as far as true quality of
games, with fantastic sound and graphics, the Saturn is as
good as a PX or N64, but I can't compare them directly.
It's sorta where I've been before, liking the A8 when the
general concensus was it was a 'game machine' and inferior
to C64 and Apple ][. Again, my feelings are 'BS', the A8 was
advanced for its time. S. Jobs left Atari with enough
knowlege to put together an inferr pduct and market it
fast, but the A8 was far ahead of the ][ for me.
I think the problem with the N64 is gonna be the cart only
concept. Carts, especially these whopping ones, 100s of
megabytes, are gonna be expensive, while the Saturn and PX
will be able to produce 100s of megabyte software at a
fraction of the cost of N64 software. Off topic, but there
is the same feeling about my Saturn I had about my A8.
Russ Gilbert

# 2807. Re: Java

Maurits van de Kamp (maurits@bassment.demon.nl) wrote:
[snipped stuff re: security implications of downloadable TOS minapps]
: It could be done if the same restrictions apply as they do to JAVA-applets:
: A JAVA applet cannot access files on the local machines, nor can it connect
: to other servers than the one it was downloaded from. So if CAB could have a
: little TOS-environment from which the local filesystem cannot be reached, it
: would be safe.

That's easier said than done; Java machines are by definition virtual, so
it's dead easy to limit access. TOS machines, OTOH, aren't; there is no
machanism to prevent a program from accessing the disk or other RAM, even
under something relatively sophisticated like Mint.

Can I bung one inside my STE?

(and get it work also for the smart arses out there!!!!)

IDE or SCSI ? 2.5" or 3.5" ?

What interfaces/chips/soldering do I need?

Thanks guys.

I love Gemulator on my PC but the best solution would be something
like a 200Mb drive inside my STE.

No, sorry, you'll have to repeat that, I've gone hard of hearing.

If on the other hand you were meaning to ask what creates .DIM files, it could be Fastcopy Pro (Even Fastcopy 3, for all I know), which uses that extender for Disk IMages. Who knows what you were asking, though? :-)))

Adriano.... this is the same virus that infected my machine. It came from a game I downloaded from the Internet called 'Carpe Diem". You may have done likewise and wound up with the same problem. It is apparently a link virus that infects your hard disk, floppy disks and RAM. If you have Kobold, Selectric, UIS then enable display of hidden/system files. These files show up as greyed out text or icons so they're easily spotted.

Get a clean hard disk boot disk or some disk with a hard disk booter utility on it. Boot the computer from the floppy - that gets rid of the virus that installs itself in RAM from your AUTO folder on Drive C. Once you get to the desktop, use Kobold/Selectric/UIS to look inside your AUTO folder. You will find the greyed out file inside the AUTO folder - delete the file from the folder, then get Ultimate Virus Killer from Chris and run it on all your floppy disks that have been in the floppy drive for the last day or so (since the funny script was being displayed on your screen). UVK will disinfect and protect you against any further infection. Also - DO NOT RUN that stupid Carpe Diem program!!

Regards,
Keith

# 2816. TOS/GEM?

Newsgroup: comp.sys.atari.st

From: Dan Cox <village1@lightspeed.net>
Message-ID: <32FF9B8E.7190@lightspeed.net>
Source record: 128044

Being an ibm user currently, but having used the st as a kid, and now discovering a following for it, I pulled it out of the closet. It's just as I remember. INCREDIBLY easy to use, no nonsense straight forward and simple.
Now please tell me how the st series utilized GEM and TOS.
I have a 520st as an example which has tos hardwired in the computer as well as gem. This is an earlier model without the internal floppy.

I am assuming tos performed all of the operating system functions and gem was purely the gui interface riding on top of it. Or, were they intertwined?

How many versions of tos were there?
Were there different versions of gem?

And, am I the only one who thinks it's the best thing since, as some put it, canned beer?

Sincerely,
Dan

No need, as here I be! :) Yes indeed, that is a virus (as Chris said), and the only program to remove that is Ultimate Virus Killer (none of the other virus killers support BO BJOF yet). Humorously enough, one of the people you can get UVK from is Chris Krowchuk of Computer Direct, although I'd imagine that you might want to find someone in Italy who sells it. :)

# 2819. Floppy write problem

Newsgroup: comp.sys.atari.st
Date: 1997-02-10 00:00:00 UTC
From: Samuel Johansson <s94sjo@student.csd.uu.se>
Message-ID: <32FF94EC.4BB3@student.csd.uu.se>
Source record: 128047

Hi

I'm having major problems with my 1040STFM.
It began after I had left it running for a long time (I mean a REALLY long time, probably a month or more) without shutting it off. I wasn't using it at all during that time so I don't know when it actually stopped working.
This is the state it is in right now:
When I turn it on after it has been switched off for more than 5 minutes the screen is totally garbled (strange black and white, stretched and fluttering) and it won't boot. If I leave it on it seems to 'warm up' and the screen slowly turns into plain white. It still won't boot, but if I reset it, it boots OK. From now on it seems to work fine. The really big problem is that it won't write to the floppydrive. If I format a floppy, it will gladly do it, including verifying the formatted disk, but when I open the disk it still has all the files on it that it had before I formatted it. If I delete a file it disappears from the disk window, but when I later read the disk it is still there (not just the directory entry, but the entire file). Reading from the disk is no problem. I don't have access to any other diskdrives, and I don't have any hard drive, so I don't know if the problem is with the drive, the cable, or the floppy controller. RAM disks are not affected by this. I can write to the RAM disk without any problem.
The only modification of the computer is that I installed a 4 MB memory upgrade about a year before all of this happened. I would appreciate if anyone could give me some advice on how to fix this.

From: hallvart@sn.no
Message-ID: <32ffa2da86a753@sn.no>
Source record: 128048

Some time ago I changed the file status of several
files/folders/sub-folders to "read-only", but I'd like to change them all
back into "read/write".
Is there an easier and more effective way to do this than to
"manually" edit the status of each file?

I've tried using "Gemini", but it doesn't even have the "chmod" command,
and Gulam seems to work if I enter each folder and do a "chmod +w *", but
how would I go about to change one folder with all it's files and
sub-folders in one go?

I've already tried "chmod -r +w images*" and other variations of the same
command sequence, but it doesn't work. Any ideas?

I was wondering about the same thing a while ago, when I wanted to check out some .LZH files without having to "zmodem" them down to my STe first. Turns out that "lha" was installed on the UNIX system on my provider's machine, so maybe your system has it as well.

Try this on a .LZH file: lha -x demofile.lzh

An ordinary PC power supply won't fit inside the TT's case - but it's a LOT cheaper than calling Best Electronics, and it will plug right in to the power header on the TT's motherboard. Be sure to keep the black wires together (in the center of the connector) if you have a split plug (most PC supplies do have a split plug).

Yes.

>(and get it work also for the smart arses out there!!!!)

Can you solder and read a VOM?

>IDE or SCSI ? 2.5" or 3.5" ?

SCSI, 3.5 inch

>What interfaces/chips/soldering do I need?

Get the ICD Micro host adapter, and strip off all the sheet metal on the top of the STe's innards. You'll have to solder the ribbon cable from the ICD Micro to the underside of the DMA connector, and figure out where to mount the drive (good luck on that part), but otherwise there should be no insurmountable problems. Low power consumption is an absolute must. Seagate makes a 1 gig 0.5-inch high SCSI drive that's ideal for this purpose. Hit their Web page for the model number and specifications. I have one in my personal workstation TT and am thinking of adding a second one (there's room for at least 2, possibly 3, inside the TT).

# 2824. Re: magic problems

Newsgroup: comp.sys.atari.st
Date: 1997-02-10 00:00:00 UTC
From: leslieh@valis.worldgate.com
Message-ID: <5do847$ke2@scanner.worldgate.com>
Source record: 128052

Where are these errors happening? I use NVDI 4.11 and MagiC 5.03 as well (in fact, I'm using it right now). What version of NVDI 4.11 are you using? Do you use MTOROM13 (protects the MagiC kernal from being written to, which help increase stability.

Leslie

I have the following for sale:

Atari Falcon 030 computer with:
4 Meg Ram
540 Meg 2.5" HD (IBM Brand)
1.44 Disk Drive

Comes with original box and manuals.

This system is in excellent condition.

Asking $500.00 + shipping.

It happened with a variety of audio sources, Rich, or I'd have had the
same thought. I don't even own the same audio sources which used to feed
the older Falcon, so that seems doubtful.

> Regarding a fix - I haven't looked at the actual hardware, but if you're

Yep, that sounds like a good idea. Thanks.

> the left one is open or shorted. If you're not lucky... Well, doesn't
> System Solutions do repairs?

They do. When I first rang them about a year ago when the original
machine developed this problem, they told me it was a common fault, and
only repairable with a new motherboard - which they would sell me, of
course ;/

Unfortunately for you, there isn't a cure to your problems. I get the gemdos errors all the time (on boot up) with my Falcon failing to boot 8 times out of 10!

The 'alleged' Falcon compatability of MagiC5 is a myth! MagiC5 is *not* Falcon compatible. At least *not* compatible with *all* Falcons. Apparently (according to the authors) it is compatible with some!!

Oh dear. You've started me off on one of my pet subjects :)

Saying all that, I still use MagiC5 on a daily basis (despite it's problems)!

I just wish that the authors would accept responsibility for the *bugs* and fix 'em!!

You could use MagToRom (by Uwe Seimet). This uses the PMMU to try and protect the MagiC code from being overwritten. Since using it, I seem to get less crashes (it doesn't help with booting though)!

Regards, Gary

... and GEM delivers this command parameter in the command line.
See GEMDOS reference, Pexec call, 3rd parameter of Pexec (). ;-)

>A real GEM implementation would take the dragged files/directories as
>a parameter.

There is no difference between drag/drop at program start and command
line parameters. The programmer have to evaluate the passed command
line.

>CLI's will be around forever. You're right. But they are NOT the main

I'm not allowed to do so until 2016. But I mean clones and emulators from
other developers...

> Either you are talking about ATARI not developing (that is an obvious
>fact) or you are talking about what ?...I fail to see ?

> My point is that the ATARI platform, the user base the whatever! is
>ALIVE and people saying ATARI is only around for emulation, in an
>ATARI newsgroup is flame bait ?...or as it is more commanly known
>around here "Knitting class bait"

The ATARI user platform is alive, that's true. I divide them into 5 parts:

1.Gamers. They own their 1040 ST(e), playing some games made in 1992 (or maybe
in the short past). They wonder why there are so less new games?
2.Typical users. Owning a ST or MEGA ST(e) with a small harddisk, writing some
letters or doing there small business.
3.Musicians. They control there MIDI equipment with an 7 years old 1040 STFM
and the best monochrome monitor ever build, a SM 124. After every entrance
they are asked: "Is this computer compatible to my P166?" - "No. Fortunately
not." ;)
4.Power Users. They own a FALCON or a TT (TT mostly with graphic card),
surfing the Internet with CAB, coding kewl demos or making high quality
prints with calamus.
5. Some persistent software developers. They dream about making much money,
(but nearly nobody is buying new software) or program just for fun.

(I'm sure I missed some of you)

What is the group that is producing new products? Only group 5 (and some of
group 4). The other parts are crying "Why are there not so much new software
like in 1993/94?"

I published a (very small but very tricky) piece of software last autumn. (I mean alvi - Alkor JPEG viewer, a fast, simple and not memory hungry JPEG viewer. GEM of course. Monochrome only. Somebody have stated that alvi is nearly as fast as DSP viewers, but alvi needs only a 68000...)

My log files have counted more than 1'000 (!!!) downloads. (I can't count the downloads from the >10 ftp servers were it was uploaded by other ATARI enthusiasts) I recieved 4 eMails ("Thank you for that good ...", "Well done" and so on) but how many have registered? None! (The registration fee is a postcard.)

So what is my conclusion? They don't honour my work, so they are not worth to get my software. That's very simple.

My very own actual version is a little bit faster, without some errors, and supports 8 grayscales/16 colors. In some days it will possible support 24bit true color. But this version will never be published...<G>

I hope to buy a ATARI emulator later this year, the speedup will be 25x and more (emulated 68020 with 140..300 MHz clockspeed compared to a real 8 MHz 68000) I'm actually design a multimedia/game library for some applications/games, but that's a very long way to finish...

With/for that very fast but emulated ATARI I can develop applications that won't be possible on the original ATARIs (better graphics, much more speed)

> Yes, it is a well known fact that I don't like GEM, it is not
>something I would like to have to deal with everyday, I run my ATARI
>nearly every day of every year I have owned it, but very rarely use
>GEM :(

This would change if you could use a better resolution as 320x200x16. (Seriously: Can I mail you some neat screen shots to show you what I mean?)

>>I can't believe that you never started a program with the file extension
>
> Well you will have to...the only app I can think of would be some
>unarchiver, and since I found the need these there have been shells,

Of course, these "ah -t14a!asy c:\to_there\yesterday\backup\hope1.all d:\from_here\ all_the\good_stu.ff*.*" typing isn't user friendly. But (internally) our packer shell is doing exactly this for you. So you use (a hidden) command line. ;)

If I want to know the free disk space of my hardisks I type this:

Alt+M (opens a console window)
df <Return> (Starts the disk free command)
[I see a list of the free diskspace of all 14 partitions 2 seconds later]
Cntrl+U (close the console window)

If I need a hardcopy of this list, I type

df >PRN: <Return>

Same procedure with the GEM desktop:

Select "drive C:", chose "File/Info", wait 20..40 seconds, select "drive D:"
chose "File/Info", wait......

(after some minutes)
What was the free disk space of drive C:?

I hope this small example will show you a advantage of CLIs...

>The ATARI is not such a Dinasour that it needs to
>be run on command lines (I said NEEDS) you can happily run an ATARI
>without ever using one.....

There are a lot of command line tools around making the live of a developer
much easier. Of course you don't need to use a command line, especially not
as a "normal" user.

> But why?...winzip supports zoo and everything else, it even decodes
>files, why would a command line be needed when a click of a button
>will do,

Just start your winzip on a none-Win95 computer, and you will see what I
mean with

>>If you install a CLI (command line interpreter) you can use the same script
>>files on your atari, MS-DOS PC, or unix workstation.

Regards,
Uwe.

<snip>

>I am assuming tos performed all of the operating system functions and
>gem was purely the gui interface riding on top of it. Or, were they
>intertwined?

Yes. <G>

TOS is The Operating System; GEM is Graphics Environment Manager. Programs that don't use GEM at all will have an extension of .TOS or .TTP, while programs which require GEM will have extensions of .APP, .PRG, or in later versions of TOS, .GTP; the part that manages all the pretty graphics is usually referred to as AES, and there are replacement versions available (oAESis, xaAES) which can run as replacements over single-tasking TOS sometimes) or over MiNT.

>How many versions of tos were there?

That depends on how you count, actually.

TOS 0.98 was a bootable floppy-loaded version that shipped with the very earliest 520ST.

TOS 1.0 was the first version in ROM.

TOS 1.2 was the ROM version in the Mega ST.

TOS 1.4 or 1.04 (same version, different counting system due to Atari changing the rules in mid-stream, so to speak) came along later and was aka "Rainbow TOS."

TOS 1.6 and 1.62 were delivered with the STe.

TOS 2.05 and 2.06 were delivered with the Mega STe. Both 1.04 and 2.06 were made available as upgrades for end users who were willing to shell out the $60 for the chips, and then get them installed.

TOS 3.0x is the version delivered in the TT030 (I have 3.06, and I know of at least one other version).

TOS 4.0x is in the Falcon030 (again, there are at least 2 versions of TOS 4.0x; I don't know the exact numbering of those versions).

>Were there different versions of gem?

Indubitably - some adjustments had to be made when video resolution improved, for example. The folx who write the replacement AESes would be better qualified to give you details on this, however.

> And, am I the only one who thinks it's the best thing since, as some >put it, canned beer?

Hardly the only one, by any means.

Steve told me a year ago they already had the machine built.
They just need TOS to release it:)

As I pulled the HBS 640 out of a Mega I put up for sale,
I looked at the Compatibility Plus card. In another box
I looked over the extra Wizztronics memory card I have.
There was another little thingy that made installing the

Falcon clock patch a snap. 74F04 was mounted on a card and it inserted into the GAL sockets, GAL's fitting atop the Wizz card. All excellent workmanship. To bad all dreams don't make it to market.

I use TABASCO whenever I can in lue of salt:')

Welcome back Dan! We old timers are really devoted fans of the Atari hardware and you'd be surprised how much really terrific, powerful software is out there, although you'd be hard pressed to run a lot of it on a 520ST!

Originally, TOS v1.0 was on disk but moved to ROM chips thereafter. The Falcon was up to TOS 4.x and there was a beta TOS 5 as I understand it. The TT030 went to TOS 3.06, using a 32MHz Motorola 68030 and a 68882 FPU, burst mode RAM on a 64bit wide buss and full SCSI interface with 4 serial ports as well as DMA sound, stereo in and out plus the usual MIDI and other ports normally found on all Atari computers since the ST first came out. Now the clones are coming out of Germany. The T60 from Computer Direct in Edmonton runs a 68060 chip running at 50 MHz and reportedly 130MIPS. Let me tell you it a hot machine that runs like hell -the motherboard it has is aptly named - HADES!!!

With MagiC, TOS has been brought up to date by the Germans who have optimized all the routines to give us all a fully pre-emptive, multitasking OS that blazes! With NVDI you have full vector fonts on screen. There are graphic video cards, and the new T60 box has 4 PCI slots, IDE & SCSI drives.

So-o-o-o what are you planning to do with your 520? ;-)

Keith

## 2839. Da's Vector Pro

Date: 1997-02-10 00:00:00 UTC
From: Keith Brooks <newhoriz@cadvision.com>
Message-ID: <330006D7.3CD3@cadvision.com>
Source record: 128067

Since DA stopped making Vector Pro available, has anyone out there got a used copy for sale at a reasonable price? I'm looking for Vector Pro so I can do some extrusions of vector objects. I suppose they might upgrade me if I could get DA's Vector at least.... thanks all!

Keith

# 2840. Re: WebSpace HTML browser: PPP layer sn

In article <5dgg0c$5fp@ornews.intel.com>
atari@teleport.NO.SPAM.com (Rich Tietjens) said:-

>Oasis 1.35 is your best bet for immediate usage. [...]
>and it does allow the use of Lynx to browse in plain text mode.

There is a Lynx web browser working with NOS? Where? In another
article you said to someone to type 'lynx' without other informations,
could you please explain a little more?

>If his ISP uses POP3 for mail, however, he will also need NOSPOP3 to
>replace the NOS that's included in the package.

In any case take NOSPOP3, there are also at least 2 other services
(nntp POST and kill file) where it's better than the original. Or wait for
the next release of Mike de Petris's NOS update project, it will include a
POP3 client.

Bye! Bruno.

My father in Spain has an Mega II Atari, I an IBM platform.
How can I send him programs in which I have downloaded. Can he read IBM formatted disks?(not programs)

Bayat Keerl

# 2843. Using Tos1.0 form. disks with PC

Newsgroup: comp.sys.atari.st
Date: 1997-02-10 00:00:00 UTC
From: mvogel@coli.uni-sb.de
Message-ID: <32fe6000.14207802@134.96.82.11>
Source record: 128117

Hi,

from time to time I see that someone has the same problem, but I could never read a satisfying answer:

How can I read/write atari-formatted floppy disks (with TOS 1.0 !) on a PC (with windows95)?
I know that some people may now be willing to suggest: Use st2dos or st2ibm, but I tried and tried again, this doesn't work!
On another PC (with win3.1 instead of win95), it partially works, i.e. half of such a tos disk is readable, the other half seems to be corrupted (I talk about 720 kB disks).

Moreover, Gemulator (for windows as well as Gemulator Classic) claims to let me use such tos1.0 disks on my PC, but this isn't true, it simply fails, despite their great promises!?

My two computers (Atari 520ST+ and Pentium 150) are in different locations, so a cable connection isn't possible either.

Who has found a way and would be so kind to help me?

Many thanks

Manfred

## 2844. Sundog on Gemulator

Newsgroup: comp.sys.atari.st
Date: 1997-02-10 00:00:00 UTC
From: jbjr@iglou.com
Message-ID: <32fe697b.2977856@news.iglou.com>
Source record: 128118

I finally got Sundog to work with the Gemulator. It took some trying, but it works, sort of.

Here's how I did it, in case anyone wants to know.

First, my copy is one of the first made for the ST (back in old 1985). It wasn't protected, but was the Atari ST format disk. I used my friends 1040STE to copy the disk to a standard formatted disk (MS DOS compatible). It will now run under Gemulator 3.6 and 4.5 and 4.6.

However... The Gemulator does strange things with the scrolling effect. When you're out walking around your ship and the screen scrolls, your ship will appear twice or three times. The scrolling is not right like on an original ST. It's not really playable.

I hope it works better when my Gemulator card arrives.

If you format your disk using Neodesk you will be able to use them on
a PC. BTW. Neodesk is the desktop replacement for Atari. I have done
this countless times flawlessly. You can find demos of this program at
Gribnif's web page.

>
> Greetz,

Doesn't help much since Zero-X doesn't do the job. The question was
about a program that executes a timestretch on a *stereo* file (without
loosing sync) which Zero-X can *not* do according to one of its authors.
Also, it cannot operate on files larger than RAM, which would be hopeless
with my 50 MB aiff files (not counting that, Zero-X is a great program,
especially its SCSI transfer facilities which seem to be excellent).

I have almost completed an own implementation that does a time
stretch on 16 bit stereo wav files of any size, e.g. 50 MB. If
someone gives me the Cubase Audio format for aiff files, I might
do an aiff version. And if there's *some* interest I might upload
it somewhere.

/Mikael

# 2856. Why I'm Impressed With OXO

Newsgroup: comp.sys.atari.st
Date: 1997-02-10 00:00:00 UTC
From: bjr@edison.ebicom.net
Message-ID: <5dmm20$9tn@einstein.ebicom.net>
Source record: 128130

Greetings Gang,
Just wanted to say...I'm very impressed with OXO right now.
A few weeks ago I posted a fairly critical yet friendly article about
their new coming commercial release WWW browser "Web Space". In a very
short period of time, they'd updated their web-pages to include all of
the information I'd requested (and it was a lot!). This one gesture has
sold me on Web Space...can't wait to get my hands on it now! I get the
feeling OXO is very sincere about makeing WebSpace 1st class...and doing
the best of ability to deliver what "we" ask for.

Brian

# 2857. Wanted: Mega-STE

Newsgroup: comp.sys.atari.st
Date: 1997-02-10 00:00:00 UTC
From: q-funk@megacom.net
Message-ID: <5dm2b1$88v$1@cti01.citenet.net>
Source record: 128131

I'm looking for a Mega-STE (only offers from within Canada please!)
-----
specs wanted:
* 4 Mb RAM
* internal Hard-Disk controller (HD capacity not important)
* clean or mint condition
-
e-mail offer and details (condition of equipment, included goodies).
-
Note that I do not need any monitor; only the machine and, possibly,
some included power softwares (NVDI 3.x &+, MagiC 5.x, etc.) are of
any consideration for this purchase, should you offer your complete
package --unless the price is SO rock-bottom that the monitor seems
like a freebee in the package deal 8^D
-
to those who had replied to my similar post last month, I've changed
providers, after having lost access to my previous e-mail account, so
please re-send to my new e-mail <grin>

As long as there are ATARI users (and there are a *lot* of them,
and any action is to be spotted in the ATARI arena, ATARI is alive
AS A PLATFORM.

In your statement, you could as well state that WINDOWS 3.1 is dead,
because Microsoft doesn'd develop ANYTHING on that platform
anymore ;-) Nobody would agree with you.

> Show me a example of new developments from ATARI Corp.
> I find only clones and emulators.

See my previous comment.
Atari as a platform is alive...maybe even growing slightly.

> I can't believe that you never started a program with the file extension
> *.TTP (TOS takes parameters). You will see a dialog box that let's you
> enter some parameters (commands) in a line. That's a (very simple) command
> line.

The GEM approach is to drag the object to the TTP, as command parameter.

CLI implementation is a patch for UNIX-style programs, etc.

>
> If you install a CLI (command line interpreter) you can use the same script
> files on your atari, MS-DOS PC, or unix workstation.

Right.

> zoo a a:archive .
>
> will have the same result on all three systems. It will start ZOO (a packer)
> and packs the actual directory to disk.

A real GEM implementation would take the dragged files/directories as
a parameter.

Mind you, I use OS/2 (another 'dead' platform, hahaha) at home, Win3.11
at work, and an ST at home. I don't like the Win95 interface (worked
with it),
nor the Win3.11. GEM is OK (maybe because I got used to it so much
during

my pure ST time), OS/2 WPS is (IMHO) very good.

CLI's will be around forever. You're right. But they are NOT the main means
to work and interface with your machine, anymore.

Regards.

Yup. As someone said. They have used every excuse found in a book (or
something like it). This one must be the best, " They lost the chips
on-route ". :-))))

Clowns? ;-)

Bet you have Tony. Every time you enter parameters into a TTP program
you're using a command line. Even if you've never used any other (and I
know that STOS 3D came with some TTP apps) you must have used ARC.TTP to
unarchive all the STOS apps and MBK files in the original package.

I understand that Oasis (or is it ICE?) supports email, usenet and ftp and
is, from what I have heard, easy to use.

I use MiNTNet, but setting this up is not just a matter of "double click on
INSTALL.APP".

What is the going rate for an Atari Falcon 030 with 4Mb RAM these days.
Especially one in a desktopper case with 160Mb of hard disk, Lattice C 5.6
and various other manuals, and software?
I also have an IBM SVGA monitor which I use for it which can go too.

If someone makes me a serious offer I may sell it. If not, I'll just keep
it.

MS-DOS is based on CP/M. The similarities ore obvious, most notably the
8+3 file name system. Naturally there are differences also, otherwise
MS-DOS would be CP/M.

> QDOS is a analogue of CP/M.It used 8086 and CP/M a 8080.Programmes are
> totaly incompatible.Just like how MS-DOS 2+ system calls are analogues of

You are getting confused between an OS and hardware. The OS is simply
an interface between the user and the H/W. In theory, any OS could be
made to work to work with any H/W. The ICU's they normally run on are
irrelevant.

Hi, I was wondering if there is an enlightend Atarian out there
who could answer following Questions...

I have a Atari Mega ST 2

1. What can i connect to the Processor direct slot?

2. Can I put a Internal HDD in it, and in that case WHAT?

3. Ascsi, what is that? Can in connect a SCSI HDD?

4. Can I expand the RAM? What circuits do I need in that case?

Will anyone sell me a HDD for it? I live in SWEDEN.

I would be thankful for a reply...

I am trying Lacescan ATM.

I find that I must have the switch set to the 'off' position before I
power up the ST, otherwise the machine won't boot.

I also find that it sometimes gets confused about which res it's in, so it
won't let you change from Low to Med.

Appart from that, it works; something I could not get the PD version of overscan
to do.

Michael Grove (mgrove@owens.ridgecrest.ca.us) wrote:
: Welcome to the group. How about a little info on the
: 060 accelerators available on the Amiga platform.
: Performance, software issues ect..

Well, ok, in short, they're all fast. More specifically, they're available for the mid to high end Amigas (1200, 2000, 3000, 4000). They range from $700 to nearly $1500, depending on features, manufacturer, models, etc.

There's at least 5 manufacturers of 060 accelerators, and the Draco Amiga compatible is 060 based.

Most notable of the bunch is the Phase5 technology, which includes software to patch certain FPU instructions directly to the 060 commands rather than let them get bogged down in the chip's 040 emulation.

Yes, that's why I said it.

It is, however, dependent on the MUI (Magic User Interface) system on the Amiga, which means I wonder if instead of an IBrowse port, you'll get parts of its technology (the image decode library, etc.) in a new browser.

> --

> :=----+Steve.

Yes, there is, with a dedicated lha program.

We have it on our local mainframe, which is a single-processor
SPARCstation 2 under SunOS 5.5. If you have that, or a Solaris, I can send
you a binary executable. If not, you will have to search around the Net
for a source (it is free) and compile it at your host, or home computer.

If you'll reply, please use my personal e_mail.

Good luck!

Tomo

Well if you dont find one for the $135, let me know as I have mine
available for $175 plus freight.

Thomas

$175 is my lowest dropping point as I know eventually it will sell as its
a good price.

Another added plus is I will throw in the magazines we had been discussing for 1/2 price. $25 plus freight for the magazines if purchased with the monitor. That would make the magazines in your original budget for your user group. Good bargain.

Tom

## 2888. Anyone using "That's Write"?

Newsgroup: comp.sys.atari.st
Date: 1997-02-10 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <32ff5ad2457b95@sn.no>
Source record: 128162

I'm working on installing a harddrive for my dad's system, and one of his programs is the "That's Write" word-processor.

It seems like he's somehow managed to mess up the master-disks, because some files are apparently missing when I try to run the "install" program, so I was wondering if some kind soul out there could help me get hold of the missing/corrupt files needed to get it working?

I'm not quite sure of which files are missing, so I'd have to get some sort of listing of the files included with the original disks and compare them with what I have.

Does anyone know of a good 'postmortem' program that displays the registers
etc. after a program has bombed ie. RAM $380 - $3EB!

It must work under MagiC.

TIA, Gary

> at great length :-))

SHTML
Pages that contain Server Side Includes (SSI) are by default *.shtml.
Pages containing SSI are also called parsed-html files. These files are
analysed by the http-server. Server Side Includes are special codes you
have to put in your html-code and pages. These codes allow special
options that the http-server will execute. With the SSI you can include
other files and variabels. Here are some exemples of SSI code you have
to put on the page :
<!-- #include file="signature.html -->
This SSI will show a signature file on your *.shtml page.
<!-- #echo var="DATE_LOCAL" -->
This SSI will show the local date on the *.shtml page.
These SSI can also used to get info about the visitor.
<!--#echo var="REMOTE_ADDR"--> shows the IP-address of the visitor.
These SSI will only be executed when you put them in a *.shtml page, and
not on a normal *.html page or you've told the server so.

The home-page you put on a server is normally named index.html. This
name can also be something else, but then again you have tell the server
again what he has to look for. If you don't specify a file the server
has to load automatically, he will display the entire directory with all
the files in. This isn't very plesant for the web-surfer because then he
has to think a little about on what he could click.

If somebody wants I can put an example of both of these things on my
WEB-server, so you will be able to see it once real what I mean.

Yep, they told me at the same Toronto show that the card fell off the truck and got broken on the journey. Now, it seems to me that if I had a hot new product like this and I was taking it to a show... it would certainly ride in my lap all the way!

Anyway, Afterburner 040 exists and is supported extremely well by Black Scorpions and Titan Designs. Who needs Barracuda now?

On a side note, I called Wizztronics the other day and Steve told me that they had bought Atari and are sitting down "as we speak" with an Engineer to design new TOS machines.

Take it with a grain of salt folks...

All the best,
Chris @ Computer Direct

For you, it's great - but where does a new Sysop get a registered FIFO, or a key for Fidodoor?

>I have never liked the script language of Ratsoft and while Octopus
>IS supported, it's a bear to set up. Why can't somebody come up with a
>real nice BBS program for the 16/32 bit Atari machines that's easy to set
>up and allows for "easy" file transfers and "easy" I-Net ability? Must be
>because "we" are a dieing breed. Hmnnfff!

Actually, if you can't set up the (relatively old) demo package of Octopus, you probably aren't qualified to be a sysop. <G> It consists of 3 steops:

(1) Unzip the package to your C: drive

(2) Edit the Octopus.Cfg file to change the sysop name.

(3) Run the program.

Granted, adding a bunch of existing file areas is a PITA but it's not /hard/, just tedious.

Adding a CD-ROM to the BBS system is almost trivial; run the provided utility with a simple "make" command line option (to make writeable FILES.BBS files on your hard drive) and then add the info thus produced to your Octopus.Cfg file.

And this is turning into an advocacy discussion, so I'll close by saying that, if anyone (who speaks/writes English - there are others better qualified than I in other lnaguages) has any specific questions about an Octopus setup, I'll be happy to answer them in email.

# 2901. BTV the new strain, part 2

Newsgroup: comp.sys.atari.st
Date: 1997-02-11 00:00:00 UTC
From: Ade@finitive.demon.co.uk
Message-ID: <855690352_OASIS_@finitive.demon.co.uk>
Source record: 127925

Hi again,
The info on the new strain follows....
(Hope you read or remember the original, it helps this one make sense!)
The Baby Turtles now have their own terrorist group, The Baby Turtle Liberation Front (BTLF), not to be confused with the counter organization, The Liberation Front of Baby Turtles (LFoBT)!
The BTLF's main task is to liberate all electronical and mechanical items from the control of us humans, or part humans, and run them themselves.
One of thier terrorist actions seems to be leaving little bombs all over the place, these have been noticed on many monitor screens, completely affecting the controlling humans work, you may think this is just a normal crash, but while they are causing havoc with these mini explosions they have control of your computer. Hav you noticed light bulbs suddenly go ping when you turn them on, the turtles place a little bomb inside the bulvb that goes off when you turn the light on, of course sometimes thesew bombs go off prematurely and you'll see the light ping out when its still on!

Remember the Baby Turtles are out to get you ......

> package will serve with other programs for e-mail, news or ftp.

> I've found many other programs (Oasis, NOS, Ice) but I don't want to
> download all and everyone to find that they don't fit the purpose...

I believe that Oasis and NOS are the best two for normal TOS.
If you have MiNT, then get MiNTNet, but only if you are sure
you can configure it correctly; MiNTNet is a *proper* socket
based TCP/IP stack, and is a bitch to set-up correctly.

Oasis and NOS come with tools (ftp, etc...). Oasis is newer
than NOS, but couldn't support PPP the last time I looked;
though they did say it would soon, and I looked quite a
while ago. MiNTNet supports PPP, but it's harder to use.

Basically, get NOS, unless you find that Oasis does PPP
(which it didn't before), or you're a dedicated UNIX hack
in which case you'll like MiNTNet.

What you need is some Russian fonts. I don't know where you would get these from - I imagine that (given that you use Speedo compatible GDOS) Bitstream would have some. Failing that, you could use TrueTypes (there must be Russian TrueType fonts about somewhere) with NVDI/Speedo 5. The drivers for STs don't tend to use the printer's built-in font rendering, so uploading the fonts to the printer just reduces the amount of memory free for other work.

If you're just printing ASCII, then you could use the PC program to upload the fonts, then just plug your printer into your ST. The fonts will stay in the printer until you next reset it or power it down.

# 2905. Cable between ST and Megafile 60 harddisk unit

Newsgroup: comp.sys.atari.st
Date: 1997-02-11 00:00:00 UTC
From: 0schenk01@flnet.nl
Message-ID: <3300d5a9.1269384@news.flnet.nl>
Source record: 127929

Hi!

I recently bought an Atari 1040 Stf with an Monochrome
monitor/external diskdrive and build-in PC-AT emulator and a Megafile
60 Harddisk unit. It cost me about $25 in all and it works perfectly.

However, I am missing the cable between the harddrive unit and the ST.

Does anyone know where one can get these (no supplier has any ST stuff
left!). I would be equally happy if someone could get me the schematic
of the cable so I can build one myself.

Thanks!

Jacob Schenk
(0schenk01@flnet.nl)

Is the program Mpack or Munpack commercial, shareware or freeware? Where is it available? (I didn't seem to find it on HENSA or UMICH. By the way, has HENSA dropped its access limits for non-UK domains? I've had no trouble connecting well before 8:00 PM GMT lately.)

> has the same archive of 'images' that the 8-bit has for the emulators.

Of course there are disk images, that's what msa(?) and dms (Amiga) are
for, If he wanted someone to email him a copy of a ST disk it would'nt
be
very practical to Zip it or whatever, just 'mash' it with MSA and send
the 'disk image'!

Jonas.

Sundog exhibited the same behavior under TOS 2.06! I seem to remember correcting the situation by running Warp9 before Sundog, of course it has been quite a while since I did this and it might have been another game that this fix was for! Once I got the TOS switcher board installed and was able to switch back to TOS 1.62, Sundog worked perfect without any messing around! Oh. yeah! buy and sell scatterguns for cash and stock up on nutripacks before going after the last cryogen.

How about removing the ability to cache the downloaded pages? Having to
wait while it grabs the page from the original site every time you want to
go back a page would seem to provide a real nice incentive to buy the full
version!!

>
>> >BTW. WebSpace will be more than just a Webbrowser as well, atleast if it

>> I for one have never got on with mail/news in MSIE and use Turnpike instead.
>> Thus the facility is wasted on me!

News, mail and FTP seem like a very good idea to me! Especially if I could
follow an FTP link from the browser and actually get the file that way, at
the present time I have to write down the url then quit CAB and fire up
mgftp to do this! Very clumsy!

>
>Sure, if it isn't any good.

>> suffer!

This is only a good idea if you are running a multi-tasking system and the
browser is able to call the FTP client and pass it the parameters it
needs! At least if you are following a link to a file on an FTP site!

>

No way. You will need a multisync monitor. The IBM 8512 doesn't support
the Horizontal Frequency used by the ST.

It does run on a TT - I have a couple of 'em. <G> However, like all other
DMA players I have tried, it doesn't convert SounBlaster's standard sample
rates to the STe/TT/Falcon DMA standard sample rates on the fly, so I
usually use SoundLab to convert them first.

Get two plastic crimp-on DB-25M plugs and a meter or so of 19-conductor
ribbon cable (at least 19, you can always strip off the excess conductors).

Fiddle with the plug and see what's the best fit to the ST's DMA port; then
use something permanent to make that plug "ST" and remove the extra pins on
one end (so it will plug in all the way and not have pins hanging in the
air).

Do something similar on the hard disk end; mark this plug "HDD"

Crimp the plugs onto the ribbon cable so that pin 1 goes to pin 1 and so on
down to pin 19 to pin 19.

Plug and play.

Simple enough - in the demo version, after running for, say, 5 minutes, make it add a great big "unregistered DEMO" banner across the entire screen display area and flash it on and off. Once the banner appears, disable the click-and-browse features, so that mouse clicks on anything other than "quit" don't do anything.

And in order to ensure that no one can bypass the limitation, you make the code multipley redundant, and the program will check its own CRC before allowing you to open any page when it first runs.

I've seen MagiC Mac in operation and it seems pretty stable and works
reasonably well.

I use the TOS2WIN demo here to check compatability of ST proggies that are
going to my ftp site, and I like it a lot. Will buy it eventually; it
requires no special partitioning of your hard drive, no TOS images, no other
goofy operations, and it allows you to have a different "virtual ST" (or
vitual Falcon, since it supports 256 colors in whater rez your video card
can handle) for each and every program - and you can run bunches of them at
once, in the registered version.

You can find more about it at http://www.aixit.com/ - the pages are all in
German right now, but I'm working on an "unofficial" translation for them.

The point being, if you're going to use the PC to download anyhow, then the
files are going to be on the PC, and you might as well use that
number-cruncher for doing what it does best - crunching numbers, i.e.,
unzipping the files. Particularly so if the ST doesn't happen to have a
hard drive attached - we all know how slow floppies are, or at least thsoe
of us who have used a hard drive know. While the PC is doing donkey work,
Dad can be doing something useful or interesting on the ST. <G>

Lynx is a server-side browser client, so it will run with any system that gives you shell access - a dial-up shell account, telnet through NOS, or any other way you can get to the shell. Lynx should be installed on any system that has shell access available; if it's not, ask your sysadmin to install it. Since it runs on the server, there's nothing for you to download or configure - you can even run lynx if you're dialing in using Freeze Dried or TeddyTerm.

>So now the pppd could set up the ppp connection.

Strange, as the loopback interface is not PPP? Are you sure of that?
Perhaps your /etc/networks or /etc/netmasks files are incorrect?

>my provider asks for an PAP routine.

For providers using PAP authentication protocol, you must set your
username (login) in the "user" statement in /etc/connect, and create an
/etc/ppp/pap-secrets file (will have PAP-SECR name on a TOS partition
limited to 8+3 characters) with one line:

YourUserName * YourPassWord

>I presume that then the ppp connection is routed to the cab program. If
>you want to use other STIK connected programs can they work as well?

CAB works with the cab-for-mintnet overlay, other Stick family
programs should work with gluestick (ftp.cnam.fr).

Bye! Bruno.

[extracts of your MINT.CNF]
>#setenv UNIXMODE /cu

If someone knows how to set this UNIXMODE environment variable, please explain, I never found any info... All I (think I) know is that a "b" letter included will lead C compilers to open files in binary mode by default. I suppose a "t" will set text mode by default?

>setenv TEMP /tmp
>setenv TEMPDIR /tmp

The most used by different programs is... TMP! And I've set a TMPDIR also, just in case ;-).

>sln d:\mintnet u:\ # <- ici

AFAIK such a symbolic link can not work, you must give it a name, not just the root of u:...

>INIT=C:\MINT\OLDGEM.PRG

I'm not sure of the real purpose of oldgem.prg. I cannot see any difference with just nothing (no INIT line in mint.cnf), it starts also the AES and desktop from the roms... any info?

Bye! Bruno.

# 2925. Atari Programs for Sale

Newsgroup: comp.sys.atari.st
Date: 1997-02-11 00:00:00 UTC
From: brianj@iwl.net
Message-ID: <5dqqad$luj@news.iwl.net>
Source record: 127949

I have the following programs for sale. All are original disks with original documentation.

GFA Basic 3.0 with manuals $17.50
BB ST Bulletin Board for Atari $11.50

Drakkhen $7.50
Omega $6.50
Starglider $6.50
Rogue $6.50
Test Drive $6.50
Universal Military Simulator $6.50
Terrapods $6.50
Combat Course $6.50
Empire 2.0 $6.50
Virus $6.50
Carrier Command $6.50
Silent Service $6.50
Defender of the Crown $6.50
OIDS $6.50

All 14 games $48.00

Email brianj@iwl.net if interested. Thanks

>
> Regards
> Martyn

Last I was told by ORA was you have one or two free "support"
calls. After that you must sign-up (for a fee) for any additional
support for any of the products they sell. I used up my two free
calls getting a working version of Diamond Edge. They delivered and
it is a great product, but they are hard to get information from.
At that time they only had a TT in the office and couldn't see the
same problem I was seeing when it was run on the Falcon. I think a
new RSC file cured the problem in the finial version I received.
If they do market a browser for TOS, probably best to wait for
version 3 :). That seems to be their lucky number.
But if you look at it from a business standpoint, you happen to
release a product that DOES in fact work properly, how much time
can you afford to spend on the phone helping users set-up each of
their TOS machines running whatever O/S and hardware configuration
they have.....? If they can market it, it's probably
only a few bucks for them, getting them through another quarter.

Mike

CAB2 does indeed handle frames! And they look really good!

No Java, I'm afraid! And I somehow suspect that neither WebSpace nor
Ibrowse will come with that either <g>

But an awful lot of the code has been rewritten and it's quite a bit faster
than 1.5! I'm deliberately not going to mention release dates ('cos I don't
know 'em) and it's not my place to!! :)

Regards, Gary

Hallo.
I have the same problem with my Falcon. If you pull the plug in all the way
and pull it out a little bit you should get sound from both channels.
I hope this will help.

>back into "read/write".
>Is there an easier and more effective way to do this than to
>"manually" edit the status of each file?

I don't know about any of the other stuff you mention but I use Kobold
from Kaktus Software, available from System Solutions on
ssolutions@cix.compuserve.co.uk which is a replacement file selector
and is lightning fast as well as having loads of other little extras
attached including an option to change file attributes including write
protect or unprotect as you mention. It was not an expensive program
but it revolutionises the way you handle file's. Add it to MagiC and
the Ease desktop and things really start to happen on the desktop.

Just a thought :-))

P.S. I don't work for or represent either of the above companys :-)

I just changed the faulty DMA chip in my dad's STe, so I know what you're
talking about unfortunately :-(

The faulty DMA chip for the STe is marked: C025913-38
while the correct replacement chip to use is one marked: C398739-001A
(the replacement I got however lacked the "A" at the end of the product
number, but works fine anyway).

IIRC they have permission to supply a patched TOS 3.06 with the PAK. I don't know about this "un-named site" though - is it something restricted to beta testers or customers who've bought the hardware?

m> What i'm wondering is, if Wizztronics statement is true, why was it ok

This sounds wierd...

Are you talking about the shell or the ttp? Your mention of v3.12 would
indicate that you mean the ttp. If so, what parameters are you passing?

If I were to guess, I'd say that you were mixing commands and switches on the
commandline.

For example, I use the following parameters:

I:\POINT\LHARC.TTP x a /ackmL2wL:\

Do yours look anything like that?

> Vector fonts? What about SpeedoGDOS? does this handle vectors?

NVDI 3.0x-4.11 and Speedo v4.1-5.0c will all do vector fonts suitable for
CAB. Watch out for a loss of free RAM though...

> Where can you buy NVDI from in UK? Anyone selling s/h?

Second hand is quite rare - the distributors are System Solutions on 0181 693
3355.

> And, are they any shareware options?

Apart from a wider range of GDOS screen fonts, no.

> ALSO, is there a graphics card update for the standard mono setup?

You could ask Titan Designs about a Reflex card or Overscan, but otherwise
all the other options are for colour graphics cards which require the
purchase of a (S)VGA monitor as well.

> AND FINALLY! does the serial port update improve speed of WWW browsing
> that much?

No, although it may make it more reliable.

> I notice that a lot of local processor time determines the output speed,
> you know 'Downloading image/Converting image'

This is down to the processor speed. A second hand Falcon may be the easiest
and cheapest option for all the upgrades you're thinking of tbh...

mn>
mn> aixit@aol.com wrote:
>> Magnum ST

I'm probably being even more stupid than usual, but I can't see anywhere in
this text where it tells us what it is! I've never heard of a Magnum ST
card, a Software Service Seidels card or an HBS240 or HBS640.

By implication, it seems to be a RAM upgrade card - is that right?

>> Magnum ST
>>
>> 0MB 229,-
>> 4MB 259,-
>> 8MB 279,-
>> 16MB 379,-

So, this seems to say they've broken the 4Mb RAM limit? Do you know whether
they will respond to enquiries in English? (I'll EMail them anyway...)

Thanks for your translation.

# 2945. .HELP "BO BJOF"

Newsgroup: comp.sys.atari.st
Date: 1997-02-11 00:00:00 UTC
From: please@no.spam.mail.here
Message-ID: <28940_please@no.spam.mail.here>
Source record: 127984

*Hi Adriano*, on 10 Feb 97 you wrote: ...respect, brethren

AV>
AV> HELP "BO BJOF"
AV> I have a Mega STE.
AV> Since yesterday the following word: "BO&#65533; BJOF" often appears on my
AV> screen. I don't know what is the reason for that stuff...
AV> Can someone tell me how to resolve it?
AV> And if it's a virus can someone tell me where can I find an antivirus?
AV> (in english 'cause I don't understand deutsch).

From the UVK docs:

#####
Virus #95

Name: Carpe Diem Virus.
Type: Memory-resident reset-proof bootsector virus originating from a
Trojan Horse.
Discovery date: Spring 1996.
Virus can copy to drive(s): Current floppy drive (A or B).
Virus attaches itself to: Hdv_bpb, resvector, vbl and undocumented reset-
resistant.
Disks can be immunized against it: No.
Immunizable with UVK: No.
What can happen: The text "BO[BJOF" appears at the top left of the screen.
Your computer can crash.
When does that happen: The text is displayed 2048 vertical blanks after
system start-up (on a 50 Hz colour monitor that
would be after about 40 seconds). The crash can
(and will) happen any time after that.
Resetproof: Yes.
Can copy to harddisk: Yes, but only in a file form ("~.PRG", see below).
#####

Look in your AUTO folder and remove a *hidden* file named ~.PRG (use
Selectric or UIS to view hidden files) and then do a cold boot with no floppy
in your drive. Check any floppies that you may've used recently for a
similarly named file.

UVK is quite possibly the only Virus Killer that recognises this virus. It's
available directly from Richard Karsmakers at cronos@worldaccess.nl

>
> Now, I have GDOS but am I right in thinking that NVDI 4.x is needed for
> Vector fonts? What about SpeedoGDOS? does this handle vectors?
Both will give you vektor fonts, Speedo will allow you to use PostScript fonts as well. NVDI 4.11 will also let you use P.S fonts but only with an additional module (about 20UKP). The recommendation is to use NVDI as it will also speed up screen displays.

> Where can you buy NVDI from in UK? Anyone selling s/h?
System Solutions 0182 693 1919

> And, are they any shareware options?
None.

> ALSO, is there a graphics card update for the standard mono setup?
S.S (as above) could probably help, second hand you might be able to get a Reflex graphics card (adaptor required to connect to non-Mega STs). A translation of the ET4000 graphics card is being worked on but isn't r

d> I fail to see your point. DOS 3 and DOS 2.5 worked with all versions of
d> the OS.

The point being that Atari didn't make it available because they were jolly
nice people who thought that everyone should have free and easy access to the
upgrades of their OS extension, as you are suggesting - they did it so they
wouldn't get ripped to pieces for releasing buggy software.

Games publishers would've included the old 8-bit Atari DOS with 8-bit Atari
games because it's likely that the bugs in the one DOS caused the game to fa

d> You would not have to use a old "compatibility" OS if you wanted to use
d> 2.5 in favour of 3.

As above.

h>> All manner of utilities are available to patch the OS by intercepting
h>> (not relocating the original) OS calls to replace them with better
h>> alternatives. They're implemented using the Auto folder, usually.
h>>
h>> DOS (Disk Operating System) is an outdated term with the ST, though.

h>> GEMDOS is only one part of the OS on the Atari ST, along with BIOS,
h>> XBIOS, GDOS (TOS) and the AES and VDI (GEM)...
d> Technicaly, DOS isn't part of the OS. But, as I remember, MS-DOS and
d> CP/M device drivers can't take filenames, so DOS is simply hacked into
d> them. I have no idea about devices taking filenames on the ST.

On the ST, GEMDOS is part of TOS. On an Atari 8-bit it was different (I
can't remember how tbh). Why you're talking about MSDOS and CP/M is a
mystery. It has no relevance here.

h>> There's little point in a replacement single-tasking OS, but those
h>> like MagiC can run single-tasking just as well as co-operatively
h>> multitasking or pre-emptively multitasking.
d> Of course there is, you want to keep up with the latest features. On
d> the opposite, you want to keep the old TOS around for games.

I don't - but if anyone wanted that they could just disable the replacement
OS... end of story.

h>> Device dependent drivers required to access hard disks or CDROM's are
h>> also readily available (ICD, HDDriver, CBHD, SCSITools, Extendos etc).
h>> These add features to the built-in BIOS rather than replace them AIUI.
d> I don't know if I include disk device drivers as a part of DOS.

What do the letters in DOS stand for then? GEMDOS is held in ROM as part of
TOS - it's inescapable whether you'd include it or not. Extensions to
support new hardware is equally inescapable.

d> On the Atari, all devices were accessed in the same way (even PBI
d> devices)

On the 8-bit Atari, maybe. The ST is decidedly not the same machine. They
are completely incompatible and do things in very different ways. Please stop
saying "Atari" in such an all-encompassing way.

d> But most other machines have device independance so DOS can access your
d> new disk drive like any other disk drive.

Eh? That would only be because peripherals support a common standard -not
that computers themselves are device independent.

h>> Does that answer your questions?
d> I don't think I asked a question. I just said that TOS and DOS are
d> stored in ROM. (I assume that DOS is built-in to TOS; what if you need
d> to access a CD drive?)

Wrt your last sentence, did you read what I posted before? I already
explained that.

Wrt your first sentence, that's not true either. You stated that:

######
If you restrict distribution [of TOS] you force programmers to programme for
TOS 1.0! Rather than that,they'll probably just make it so it won't work with

old STs or they'll violate the OS like everybody does on the PC. ######

Which was never ever true.

You then said:

######
Look at the Atari, DOS usually came on a game disk (depends on the game), and
always with a new disk drive.
######

Which was only the case with Atari 8-bits - never ever the Atari ST, which is
what this newsgroup is discussing. I believe there's a comp.sys.atari.8bit
newsgroup if you want to discuss it in there, but it's off-topic and
irrelevant in here.

Finally you said:

######
I assume that TOS is re-locatable, so I assume you can load other TOSes even
on a machine with TOS built-in (but it's kinda huge). Isn't there a OS that's
like TOS but with no multi-tasking or anything else to get in the way? Of
course games probably wouldn't work with it. The same problem occured with
the Atari but Atari corp. simply distributed a disk with the old OS on it.
######

You didn't know whether TOS was relocatable so I listed how it all fits
together for you.

Does that help clear up your confusion?

h>> Here comes my enormous sig again... <g>
d> Damn BBS ad.That belongs in the "Organization" header.

Makes sense, but I'm not the Sysop...

So why did you requote it?

Nobody and I think Wizztronics knows it as well.

> On a side note, I called Wizztronics the other day and Steve told me
> that they had bought Atari and are sitting down "as we speak" with
> an Engineer to design new TOS machines.

Are you joking, or is this what he realy said?

> Take it with a grain of salt folks...

I will, but you must be super duper stupied to say that you have
bought Atari (whatever that means as Atari does not excist) if
you havn't.

When is the question if it's a good thing or bad thing. So far
Wizztronics havn't manged to come up with anything. Maybe it
had been better if Medusa Computer Systems had bought them as
they do have managed to come up with atleast something. :-)

Maybe it's time we start discussing how this new computer would
look like and mail the result to Wizztronics so that they make
it right this time? It must be better than that A/Box the Amiga
guys are talking about. ;-)

And how long will it not be until there is a "key" to download to
remove this limit?

I'm not so sure I'm always in favour for full working demoversions.
Atleast something must have been removed from the code or someone
will find a way to go around the limit.

Maybe a demo version without picture support or something which
would have been totaly removed from the code.

Either it's freeware or not with the exception of Shareware.

No flames please I don't just want to kill a product before it's
even released.

1. Remove any program from your AUTO folder.
2. Remove any accessory
3. Install HDDRIVER
4. Do not use any alternative shell (no Gemini, no Ease)

If the system still seems to be unstable you most probably have a
Falcon with unstable IDE or SCSI hardware.

IBM used to make them, but demand was very low.

AFAIK, they have discontinued production.

You can get 2.5" IDE drives + an IDE to SCSI adapter (which is small
enough to fit onto the drive).

More to the point. They sent most of the STs produced to be sold in Europe! They allocated approx. the same number of machines to the UK as they did to the US! That also go for France and Germany! That is a vast difference in machine per capita, between the US and Europe! Here in the US, you had to hunt for a 1040ST to buy, from what I hear, you could at one time walk into many High street computer stores and take your pick! In my opinion this state of affairs was brought about by them being forced out at Commodore, and there after not wanting to issue the stock needed to expand the business for fear of diluting their holding enough for another takeover to happen!

According to one of the Black Scorpian guys, the stack errors are caused by MagiC not having proper memory protection. I also get the GEMDOS errors, though not as often as Gary (see his reply). As he says, MAGTOROM will help with the stack errors. You'll just have to live with the GEMDOS problem or stop using MagiC - Hell will freeze over before ASH admit there is problem.

I'd hazard a guess that you're running in 4Mb?

If Tony is like me he only used the ttp one time! And that was to unarc arcshell.prg so he wouldn't have to do it anymore! You must have one heck of a memory to be able to remember the name of every file on your hard drive! I have to get the file selector and take a look to be able to remember the crap 8.3 name and full path. All the archivers I use have GEM shells!

>> spots where it could run into a problem . I believe a time limited demo
>> would be the best route to go as I and not OXO will test the program on
>> different sites to compare to Cab for speed ...

Absolutely! I for one wouldn't fork out all that money for WebSpace util
I've seen a proper on-line working version! *Not* limited to OXO's page.
What does that prove? Nothing! What about more complex pages (even yahoo).
Who's to say it'll work with those!
I've tried the demos of WebSpace and sure it's *very* fast, but other than
that I'm not hugely impressed. Too many bugs and not enough HTML support
yet!

Now, I'm not knocking it. I'm sure *when* it's finished it'll probably be a
great product. But like I say, having tried the demo, I'd want to see a much
improved, online working version *before* shelling out my hard earned cash!

>And how long will it not be until there is a "key" to download to
>remove this limit?
>
>I'm not so sure I'm always in favour for full working demoversions.
>Atleast something must have been removed from the code or someone
>will find a way to go around the limit.

Point taken. Maybe a time limits not a good idea, but I'm sure that they
could come up with something better!!

>Maybe a demo version without picture support or something which
>would have been totaly removed from the code.

Ahhhh. And *not* picture support!! Would you seriously shell out all that
money having used a web browser with *no* graphics. Come on, please,
graphics is what the www is all about!! That is not a viable suggestion
IMHO!

>Either it's freeware or not with the exception of Shareware.
>
>No flames please I don't just want to kill a product before it's
>even released.

Nor do I. Competition is healthy. Soon we'll have 3 browsers to choose from
(CAB2, WebSpace and Ibrowse (if rumours are true)).

If I can get hold of a copy of WebSpace and try it out on-line and I like
it, then I'll fork out the money, else I'll stick with CAB!

In the good old days, you could have relied on magazine reviews to tell you how good a product is/isn't! Atari owners no longer have that to rely on!! Hence unless we try the products ourselves, how do we know if it's any good?

Yes, I know there's Atari Computing (and a great mag it is too), but that only comes out every 2 months, and therefore it could be months before a full review of a new product appears!!

The author of Stoop (whose name escapes me) had his Falcon die on him so
AFAIK, development stopped at v1.05. He even publicly announced a key
for the program to make it free so it looks like that was the end.

But lots of people have their system clock set to 1980 or whatever the
system time is, dont they? This would give them an unlimited demo...

>would be the best route to go as I and not OXO will test the program on
>different sites to compare to Cab for speed ...

The actual browser doesn't have any effect on the speed of the download
(the TCP/IP stack will have some, but it wont vary with different pages
except for the actual download time which will be the same as in Stik/mintnet)
- if you are testing for the speed that it displays pages you can use the
offline ability.

However, problems such as only recognising certain IP numbers, or problems
with forms/cgi-scripts and so-on could not be tested with such a demo...

IMO, its ok, but then I dont use either browser on the net. :)

I guess you are right, but you have the offline version to test the graphics
with. If it can display teh pages correctly without the pictures it should
do with them as well (if the offline version does it).

Anway, they must criple it somehow.

BTW. WebSpace will be more than just a Webbrowser as well, atleast if it
will have everything that is in the demo. I'm talking about FTP and
mail.

> If I can get hold of a copy of WebSpace and try it out on-line and I like

Helloooo! I may be able to provide some info!

I have just built myself and installed an autoswitch overscan board
into my trusty old 1MB STFM. It is a very simple circuit: it just needs one
dual d-type flip flop and one triple 3-input nand gate chip. (I.E. two 14 pin
ics). I have built mine on a small section of strip board.

If you want detailed instructions and the driver program, check out

http://www.oden.se/~dlanor/uran_dev/lascan34.lzh,

which gives detailed instructions of the board and connection
details. (I think it also gives a st guide document detailing all the
different connections for all type of ST: I used v3.1, which did not!)

The cost of installing the board is very small, mine came to about
5UKP. Of course, if you are not into electronics, you shall either have to
buy a readymade board (Where?) or get an electronics friend to build one for
you.

Once the system is up and running, there is a HUGE improvement in gem:
I have it way up to 720x480 in ST HIGH, and it looks very smart. The board
can go way up to 800x500, but my monitor canny handle it :(

Hope this helps

Brian.

The last time I looked, there wasn't even info about Papyrus, just the opportunity to download the demo. I also e-mailed them before Christmas for info regarding Jazz Drives on the Falcon and I'm still awaiting a reply. If HiSoft are still supporting TOS machines, they're very half hearted about it.

It's sad isn't it? HiSoft used to be one of the main suppliers/publishers of
Atari products (DevPac, DiamondEdge, DiamondBack, Papyrus etc. etc.).

Now all they *bother* putting on they're web page for Ataris is a crappy bit
about Papyrus :(

They never reply to emails (I've mailed them asking if they will be selling
Termite, no reply). Mind you, i emailed Oregon Research too and the same
response :(

It seems to me that HiSoft have almost totally switched over to supporting
the Amiga and given up on Atari's!!! :( This seems a great shame!

Gary

>Yeah, but what? It sounds like you want to test everything.

Of course I want to test everything :)

I'm not forking out all that money to find it falls over in a heap on my
Falcon! Call me paranoid, but with the problems I have with MagiC5 on *my*
Falcon, I'm very nervous about compatability!

Just look at all the problems that some people have with STiK, CAB, cab.ovl
etc. It works brilliantly for some (myself included) and not so well
for others!

CAB etc. is shareware. If it doesn't work for you, then you don't use it and
hence don't pay for it!

I don't know anything about OXO or their other products (if they have any),
therefore I want to be able to prove to myself that their program works with
*my* setup before I pay for it. I don't think that's unreasonable :)

IBROWSE(if it really is being ported across from the Amiga) may be a
different matter. Oregon Research have a proven track record of quality
products (DiamondEdge, DiamondBack etc). Therefore I may be less worried
about purchasing it untried (although I think I'd still wait until a few
people have bought and used it)!

>> Ahhhh. And *not* picture support!! Would you seriously shell out all that

Sure. Otherwise no-one'll pay for it!!
Maybe limiting the time of use (ie. after 10 mins the program quits).
No hotlist/favourites etc. I don't know really. It's up to OXO.

>BTW. WebSpace will be more than just a Webbrowser as well, atleast if it
>will have everything that is in the demo. I'm talking about FTP and
>mail.

Big deal! So it'll end up like NetScape and MSIE then!
I for one have never got on with mail/news in MSIE and use Turnpike instead.
Thus the facility is wasted on me!

IMHO a webbrowser should be just that, a webbrowser. I'm much more in
favour of individual TCP/IP clients for mail, ftp etc.
Rather than have one program do everything averagely. I'd rather it did one
thing excellently! ie. they should concentrate on making it the worlds best
web browser and not an average browser with mail/news/ftp etc. :)
If you're cramming all those features into a product then something has to
suffer!

>> If I can get hold of a copy of WebSpace and try it out on-line and I like
>> it, then I'll fork out the money, else I'll stick with CAB!
>
>And there is CAB 2 on its way.

Certainly is! I seem to get a new beta every other day :)
It's looking very good too!!

# 2976. Re: PPP on Atari ?

Newsgroup: comp.sys.atari.st
Date: 1997-02-11 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <855668531@news.compulink.com>
Source record: 128015

>>As his ISP provider only accepts PPP connections, I searched again
>>looking for any program that support this protocol and found a file
>>(PPPKIT14) by Abel Philippe (p-abel@imaginet.fr), but don't know if this
>>package will serve with other programs for e-mail, news or ftp.
>
>I'm told it will. Haven't set it up yet myself as it is actually a small
>MiNTkit.
>
I tried it (owing to losing my SLIP account due to the new owners
of my former ISP deciding to shut it down, and the next one I joined
didn't tell me they only supported CSLIP despite what they promised in
their literature) and will tell you that the entire PPPKIT package is a mess,
with very poor documentation. Unless you're a total MiNT guru I'd
recommend avoiding it. (I also found myself a better ISP that did
support SLIP).

>Oasis 1.35 is your best bet for immediate usage. It won't allow
>graphical Web browsing, but will do all else you listed in "1" above,
>and it does allow the use of Lynx to browse in plain text mode. If his ISP
>uses POP3 for mail, however, he will also need NOSPOP3 to replace the NOS
>that's included in the package.
>
>Give us 2 months and some luck, and there will be at least one other PPP
>dialer available that does work with NEwsie and so forth.

I'm looking forward to the new Oregon Research package, and will be
one of the first ones in the line to pick it up once it's available.

# 2977. Re: WebSpace HTML browser: PPP layer sn

:-)

> I'm not forking out all that money to find it falls over in a heap on my
> Falcon! Call me paranoid, but with the problems I have with MagiC5 on *my*
> Falcon, I'm very nervous about compatability!

As most Atari users. If you can use it fully offline when it wouldn't be that
bad if they removed, lets say the graphics on the oline version. As you say,
teh graphics are important and therefor remove it would be a good thing
top make you buy it, to get the graphics! If they work offline they should
would online as well. The graphics is just one small bit of html. Supporting
all the html commandostags and display them correctly is for me much more important
and the most complex part of the browser (atleast I would think it is).

The graphics is just to make it look pretty. :-)

> Just look at all the problems that some people have with STiK, CAB, cab.ovl
> etc. It works brilliantly for some (myself included) and not so well
> for others!

Yup, but that hasn't realy got much to do with the graphics. A stable TCP/IP
stack andn PPP layer is more important. All the things above hasn't got much
to do with the graphics.

> CAB etc. is shareware. If it doesn't work for you, then you don't use it and
> hence don't pay for it!

:-)

> I don't know anything about OXO or their other products (if they have any),
> therefore I want to be able to prove to myself that their program works with
> *my* setup before I pay for it. I don't think that's unreasonable :)

No, but you still can't get everything. When I say that they could remove the
graphics displaying I don't mean that they have to, buyt I think it would be
a good way to make people buy it. If the networking and html parsing works
solid I would be more than happy.

> IBROWSE(if it really is being ported across from the Amiga) may be a

> people have bought and used it)!

Yup.

> >Anway, they must criple it somehow.
>
> Sure. Otherwise no-one'll pay for it!!

Exactly.

> Maybe limiting the time of use (ie. after 10 mins the program quits).
> No hotlist/favourites etc. I don't know really. It's up to OXO.

I know, but just have a timelimit is to simple. I say this because I know
what happened to Connect which also have a timelimit. Not very hard to
go around. Maybe removing the ability to go back to the prevous page would
be enoying enough. :-)

> >BTW. WebSpace will be more than just a Webbrowser as well, atleast if it

> If you're cramming all those features into a product then something has to
> suffer!

I agree, but I can't see why you can't make it a good mail client as well.
It wouldn't be to hard to make it one of the best for TOS atleast. ;-)

> >> If I can get hold of a copy of WebSpace and try it out on-line and I like

Source record: 128020

From: jbjr@iglou.com

>I finally got Sundog to work with the Gemulator. It took some trying,
>but it works, sort of.

Great, it's nice to know it can work. This answers the question of
someone wanting a "disk image" of it...just get the disk :)

>First, my copy is one of the first made for the ST (back in old 1985).
>It wasn't protected, but was the Atari ST format disk. I used my
>friends 1040STE to copy the disk to a standard formatted disk (MS DOS
>compatible). It will now run under Gemulator 3.6 and 4.5 and 4.6.

When I looked at it, it didn't seem to be on a protected disk so it
can be somewhat read on a PC. Long as you keep the orginal disk,
then it's cool. Have you been able to put Sundog on the hard drive?
:)

>However... The Gemulator does strange things with the scrolling
>effect. When you're out walking around your ship and the screen
>scrolls, your ship will appear twice or three times. The scrolling is
>not right like on an original ST. It's not really playable.

I'm thinking this may be the hardware emulation. Gemulator was
mainly made for ST applications. Right now, there are all sorts of
emulators that can do this easliy, including the Amiga, and Darek has
perfected the 68000 emulation along with other chips.

Methinks it's time to have a ST emulation summit to get it working
for all games :)

> HBS640.

HBS240 is a 15 MHz accelerator board, HBS640 is a 28 or 36 MHz
accelerator board. Software Service Seidel is a very active Atari hardware
developer.

> By implication, it seems to be a RAM upgrade card - is that right?

Looks like it.

> So, this seems to say they've broken the 4Mb RAM limit? Do you know
> whether they will respond to enquiries in English? (I'll EMail them
> anyway...)

You can always try.
BTW: the 4Mb limit was broken lone time ago, was quite expensive then.

In Singapore, it's worst!

The government have a proxy which filters out everything going into Singapore. The government is said to have 5 full timer surfers in the NCB ( National Computer Board) whoose job is to search & locate porn sites and add them into the no-no proxy list so that they are blocked.

Last year, a guy was caught by the law for possesion of porn stuff in his harddisk. He was fine over S$50K ( S$1.4 = US$1 ) for 66 pics, I think it was like S$1K per pic, couldn't remember.

From: rpilon@achilles.net
Message-ID: <5doele$voq@hermes.achilles.net>
Source record: 128071

Well like a lot of others out there I'm thinking about moving to a PC machine. But on the way I would like to run some of my ST software on the PC.
I've heard of Gemulater and Magic C. Some of the stuff on Gemulator isn't very good. Is Magic C any better?? Is it easier to get either of these programs to work on a Mac rather than a PC.

Any thoughts would be appreciated.

Thank you

No, it's neither caused by the weather nor by the missing memory
protection. A stack error is just what it's name says: An overflow
of the supervisor stack. As this stack is 1k in TOS and 5k in MagiC it
is not too small. A stack overflow normally indicates a severe problem
with some of your programs.

Reminds me of a guy who wanted to buy the 80meg Conner
from my Falcon. He asked if I could leave HD Driver,
Atari Works and Speedo GDOS and MultiTos installed.
First thinking he was naive, I replied that it is
copyrighted software and I couldn't and wouldn't
do this. His reply angered at what I had said. He
stated that Atari went out of business a long time ago
and that it didn't matter if the software was given away.
I assured him it was just last year Atari soldout and
that many dealers carried the software he wanted. I mailed
him the vendors address and phone numbers. He basically
said I was full of shit and didn't know what I was talking
about. Needless to say I kept my hard disk.

On the subject however, I got a bunch of software with
a MegaSTE I purchased a while ago. I seen a disk with
"Sundog" on it, but there were so many I haven't really
looked to see if the original is there. If it is, is
it fun?

Mike

I think the fault is with MagiC. It doesn't like Cubase very much on any computer.
I think it will work with MiNT+N.AES, but I'm not sure.

Are you saying that MagiC does have memory protection? If so, how does
this work on systems with CPU's < 68030 that don't support it?

> is not too small. A stack overflow normally indicates a severe problem
> with some of your programs.

I'm sorry Andreas, I can't accept this. If this were the case the same
problems would occur under TOS only more so because of the smaller
stack. They don't. I don't use any particularly unusual programs and
if there were problems with those programs, it would most certainly have
been mentioned here at some time.

Regards
Martyn

Have a look at the following ftp site: acp5.chemie.uni-kl.de,
/pub/atari/mtorom13.zip. The directory also contains some other software
from Uwe Seimet, e.g. demo versions of HDDriver and Diskus.

Hi!

> I've already tried "chmod -r +w images*" and other variations of the same
> command sequence, but it doesn't work. Any ideas?
Try 'chmod -R a+w images' (note that the capital 'R' is the flag for
recursive operation). If you only want to make the files writable by the
owner (if you work with a Minix filesystem), change 'a+w' into 'u+w' in the
command.

If the files are on a FAT filesystem and the above command doesn't work, it
may be that you've got a broken chmod which can't set the correct flags for
this filesystem type.

Ciao

Thomas

## 2995. Atari HD questions

Newsgroup: comp.sys.atari.st
Date: 1997-02-12 00:00:00 UTC
From: "c.j. boksem" <c.j.boksem@ptt-telecom.nl>
Message-ID: <3301B2F4.5C21@PTT-Telecom.NL>
Source record: 127832

A few HD questions:

- Were can I find information about HD interface & software (SCSI and IDE) for an Atari ST?
- Is it possible to replace the MFM drive (is it ?) in a megafile 60? (By a bigger disk) E.g. are there still MFM drives available?
- I still have a power supply and a controller board from a Vortex jet-something. (I used the harddrive for a MegaSTE) Can I use these for a SCSI drive? Does anybody have a description of these boards?

Thanks,
Hans

Is it an ATARI Emulator or something that allows you to run an ATARI
program, Can you get an ATARI Desktop onto your PC ?
Sorry but as the demo I got was German and the page etc etc then I
couldnt figure it out, But I certainly could not get an ATARI desktop
on screen,

Scuse me, but why do you keep mentioning no need for virtual drives
when you talk about emulators? I have tried every ATARI emulator I can
find and have never used a virtual drive yet?,

Cheers...!ynoT

## 2999. Ned Player v2.4

Newsgroup: comp.sys.atari.st
Date: 1997-02-12 00:00:00 UTC
From: Sumbera Petr <xsumbe00@stud.fee.vutbr.cz>
Message-ID: <Pine.BSI.3.95.970212115530.19538A-100000@fest.stud.fee.vutbr.cz>
Source record: 127836

I have just done new version of NED PLAYER v2.4.

You can now get N_PLAY24.LZH on my page:

http://www.stud.fee.vutbr.cz/~xsumbe00

-What it is? Here is small info:-----------------------------

Simple sample player for ATARI STE/TT/FALCON. Now you can
change smooth frequency from 6 to 25 kHz in mono (SW MODE).

-features:---------------------------------------------------

- It runs as ACC or PRG
- You can use Drag & Drop
- unsigned -> signed -> unsigned (CHANGE FORMAT)
- MultiTOS compatible
- SW MODE (smooth frequency change from 6 to 25 kHz)
- Automatic file format recognize
- Keyboard commands
- Shell parameters
- VA_START protocol
- ability to play 16 bit files

-file formats:-----------------------------------------------

It recognize and play this sound formats:

- SAM (ATARI 'STOS Maestro')
- DVSM (ATARI Falcon 'WinRec')
- SND, AU (Sun, Mac, NeXT)
- WAV (PC)
- AVR (ATARI)

I would say the same thing, but that is not the reason, it's probably
the music you are listening to. ;-))

I have never heard about this before and as it's the same channel on
both machines it does sound like it's an external device that have
blowed you computer. I guess you used the same cable to both or do
you have different cables as well? I still think it's the input
device as Rich said.

# 3001. Re: Sundog on Gemulator

Newsgroup: comp.sys.atari.st
Date: 1997-02-12 00:00:00 UTC
From: TL Westgate <tl@westg8.com>
Message-ID: <3301C399.209A@westg8.com>
Source record: 127838

I am so sorry. I made the original post about the disk image. I thought the company that made Sundog had gone under. So, who would I pay for a copy of it now? If you had read my original post carefully, you would have seen that I stated I had bought Sundog, but the disk had gotten corrupted after all these years (I bought it in 1986 at the same time I bought my ST, and a copy of Rogue [one of my faves]).

I'm not saying all this to enrage anyone further. I am apologizing for my lack of knowledge regarding the existence of the company that made Sundog. Hopefully, we'll be able to stop this thread.

I mean, if I were a pirate, I wouldn't put my personal web design company in my signature file, and I would've changed my reply-to e-mail address.

I'll probably get more flames for this, but it was an honest mistake. Please excuse me. I will never ask for software I already own, ever again.

MAGNUM ST

is an memory expansion board for atari ST computers (without STE)

The Magnum board breaks the 4MB limit. It works with an PS2-SIM modul.
The Magnum is very new.

You will found more informations (in German) about the magnum board at:

http://www.aixit.com

The can find the complete installing guide in html format.

# 3004. Trashed "Realtime" program

Newsgroup: comp.sys.atari.st
Date: 1997-02-12 00:00:00 UTC
From: julian@connexus.apana.org.au
Message-ID: <5dshnu$80j@preeda.internex.net.au>
Source record: 127841

My friend accidently trashed his master disk for Realtime music program.
He was making a backup but he forgot to change disks when Fastcopy asked
him. He didn't have the master disk write protected :-(
He now has a 'copy' disk but it does not have the 'protected bits' and
will not work. It's an older program from 1988 but he likes it.

Can anyone help?

Thanks, Julian

That's realy strange. I have never had this problem and I have even an
Afterburner040 in my Falcon. I guess I'm a lucky man.

> The 'alleged' Falcon compatability of MagiC5 is a myth! MagiC5 is *not*

> problems)!

You do? You must be a crazy man!

> I just wish that the authors would accept responsibility for the *bugs* and
> fix 'em!!

Yup. It might be hard to fix though as they might not have access to a
Falcon which has this problem. I guess the Falcon compatibilty of MagiC
must have been the worse nightmare for the MagiC team. :-)

But I still say that if TOS/MiNT/XaAES/N.AES/oAESis/Linux works without
any problems the fault must lay in MagiC, atleast it must be fixable.

> You could use MagToRom (by Uwe Seimet). This uses the PMMU to try and
> protect the MagiC code from being overwritten. Since using it, I seem to get

In article <32FFCCC2.720A@geocities.com>, David Rutherford <d_rutherford@geocities.com>
writes:
>Does any one know where i can get a version of stoop which is over 1.05.
>I've looked everywhere. Someone said that there was a version 2 out, but
>i am still unable to find it anywhere on the net, could someone please
>help.

I think it is unlikely that there will be another version of Stoop, as
the author (according to ST Format, and also to a post here from the
author himself) lost the source when his machine died. He stated that
he was not planning on buying a new Falcon, so unless someone has
disassembled / re-written Stoop, there wont be a new version...

Why do you need a new version? The newdesk.inf coruption problem? if
so then you might be interested in a (minute) program that I wrote to
fix this for my system...

Well it depend on how you specify the word "Doom clone".
There are atleast two 3D maze games for the ST with texture mapping.
The one I saw a long time ago (Kill Things) were a very early preview
but it did have texturemapped walls. In the state I saw it it looked
more like a Wolfenstein clone. There is another one which I have never
seen but I think it's a Wolfenstein clone.

> :Substation is an excellent Doom-type game.
>
> wrong, it is a Wolfenstein clone (but without t-mapping! although

He did say Doom _type_ game and you could say that it is, can't you?
The plot is about the same and they present the world in a similar
way. Most people refer to Wolfenstein clones and Doom clones as the
same thing.

> :You can get a copy by calling Toad Computers at 1-800-448-8623
>
> Some people are trying to make a doom-compatible engine for the falcon.
> doesn't run on an ST of course.

This you can call a true Doom clone I guess. It even uses the same levels
and data files as Doom.

There is also Running for the Falcon. What would you call that? A Wolfdoomed
clone or a Doomed wolf clone? :-)

Does this exist? I heard that it might. I'd like to run Dr T's Omega
on my Powerbook.

# 3011. GRIBNIF SOFTWARE!

Newsgroup: comp.sys.atari.st
Date: 1997-02-12 00:00:00 UTC
From: Richard Wegner <richardw@dmapub.dma.org>
Message-ID: <Pine.SV4.3.91.970212095207.2233E-100000@dmapub.dma.org>
Source record: 127848

Hi...I am wondering does this company still support the Atari Computer line? If so, I wish to have their e-mail (if they have one) and postal (US MAIL) addresses. I would like to purchase a NEW copy of NeoDesk 4.x (what ever the version is) and use that as my new desktop. I liked the demo that is availible on umich.edu, but I don't like the limitations they put on it.

For anyone who does have it and uses it: Does it support CD ROM drives? Version 3.01 doesn't all too well. Also, how good is it when you do an AUTOBOOT of it? I have TOS 2.06 and with version 3.01 it won't autoboot, since it looks for DESKTOP.INF, while TOS 2.06 creates NEWDESK.INF instead.

Thanks...I do appreciate it! NOTE: IF ANYONE HERE IS A DEALER AND SELLS IT LET ME KNOW THAT TOO! I don't want a used version of it!

From: A.Vitali@agora.stm.it
Message-ID: <msga29557@agora.stm.it>
Source record: 127849

re: HELP BO[BFOJ - VIRUS CARPE DIEM

Thanks to all the people answered my question and specially to
Keith Brooks who had the same problem and send me some
instruction to remove this virus called CARPE DIEM.
I think I found an easy way to remove it (at least it's 24 hours
that I don't see "BO[BFOJ" on my monitor) and I' m gonna to
describe it if someone should have the same problem.

The virus is located in the AUTO folder of hard disk partition
C: but it's hidden, you can't see it.
First you have to turn off your computer and then turn it back on
, so that the hard disk will be installed and accessible but
the programs in the AUTO folder will not be executed (in my 4
Mega STE pressing the key [ALT] during the booting process) .
Then open the AUTO folder and rename the programs from .PRG in
PRX (or somethong else so they cannot run).
Now turn the computer off and then turn it on again in the usual
way after 30 seconds.
At this point I used a program that's called SEARCHER (v.2.02)
(that I found on ftp.toad.net/umich) and I told him to look for a
program called " ~.PRG " (the virus) and delete it.
That's all (at least I hope so).
(The only thing I don't know is if I have to delete the programs
that I renamed in the AUTO folder or not and I can rename them
again into .PRG) Someone like Richard Karsmakers can tell me
something about it?

Adriano

Greetings from Rome - Italy (one of the worst places in the world
for an Atari user)

Even if a company has gone under, it doesn't make the software go into the
public domain. The copyright holds all the same, even if you are not actually
hurting a party.

FTL was bought by some other company, but I don't know who.

Nick

:The plot is about the same and they present the world in a similar
:way. Most people refer to Wolfenstein clones and Doom clones as the
:same thing.

not true. wolf is really different. no deifferent floor/ceiling levels,
no real t-mapping, no BSP but raycasting etc etc.

:
:> :You can get a copy by calling Toad Computers at 1-800-448-8623
:>
:> Some people are trying to make a doom-compatible engine for the falcon.
:> doesn't run on an ST of course.
:
:This you can call a true Doom clone I guess. It even uses the same levels
:and data files as Doom.

true.

:
:There is also Running for the Falcon. What would you call that? A Wolfdoomed
:clone or a Doomed wolf clone? :-)

I have never seen Running.

>>
>> no name, because it is non-existent.

How about Destruction Iminnent <spell check> from Goodmans int Public
Domain library uk, or Substation from.....

>Well it depend on how you specify the word "Doom clone".

Without being picky I think most people would call anything simmilar
to substation, well that type of game a doom clone?

>There are atleast two 3D maze games for the ST with texture mapping.
>The one I saw a long time ago (Kill Things) were a very early preview

Unfortunatly Kill Things will not be making it from the original
author, but the source (ASM I think) will be going into the public
domain soon,

>more like a Wolfenstein clone. There is another one which I have never
>seen but I think it's a Wolfenstein clone.

Thats maybe destruction imminent as that works on a STFM and has
enhanced sound on a STe... seen it and its not too bad, better than
substation IMHO :)

>> :Substation is an excellent Doom-type game.

But STe only ...

>He did say Doom _type_ game and you could say that it is, can't you?

Anything where you are walking around in that style must come under
doom "type"

>> Some people are trying to make a doom-compatible engine for the falcon.
>> doesn't run on an ST of course.

>
>This you can call a true Doom clone I guess. It even uses the same levels

Will never make it to the ST and who is 100% sure that it will ever
make it to the Falcon as a full blown game ?

>There is also Running for the Falcon. What would you call that? A Wolfdoomed
>clone or a Doomed wolf clone? :-)

From what I saw of it at the recent UK ATARI shows, I would call
it.... Bloody Briiliant :))))))

I'm looking for a very old game on the ST - Dungeon Master.
I'm sure that at leat some of you have heard of it.
Well I can't find a working version of it no matter how hard I tried.
If any of you can make me a copy (I'll pay for the diskette and mail of
course) I'll be most grateful.

And as long as I'm at it....
I'm looking also for a step by step solution for Chaos Strikes Back.
Thanks!

# 3022. FS: Spectre GCR

Newsgroup: comp.sys.atari.st
Date: 1997-02-12 00:00:00 UTC
From: tj@oro.net
Message-ID: <tj-1202971000120001@i530.oro.net>
Source record: 127859

Spectre GCR with 128k Apple ROMS and version 3.0 Software. Works well and in very good condition. Comes with the floppy cable also. $75 plus freight.

Also have some nice software and books available that work well with the GCR.

JetLink Express for $10. Allows you to connect any standard HP or many inkjet printers to the Atari/Spectre System for printing purposes. Without JetLink, you can't really print. Very needed software for serious MAC use.

Quicken 5.0 for $10. Brand new and never opened. I received (2) for XMAS and only needed one. From what I heard it sells for $25 to $50 or so.

SuperLaserSpool for $5.00 Laser Printer spooler utility for printing.

Compuserve Navigator & Compuserve MacCIM $10 for both. Allows System 6 Macs to connect to compuserve.

Other disks (about 25 to 50) of various MAC compatible software and utilities. .50 cents each.

Tom

# 3023. FS: Atari Magazines

>
>I'm not saying all this to enrage anyone further. I am apologizing for
>my lack of knowledge regarding the existence of the company that made
>Sundog. Hopefully, we'll be able to stop this thread.

Then it is a mistake on our parts for any misinterpetation. Now for
the meat of the deal...

The problem you described sounds like 'bit rot' which older floppy
disks deterated and not work. And I came across a few like that.

It would be nice to make a backup not for the purpose of boastful
cracking or pirating, but to still play the game which you would
still own. And if there would be an emulator to play ST games
someday, then this may be a route to go.

But still, we cannot freely pass them like public domain programs. I
have been thinking of an idea for a ST emulator to play games. I
figured it can read the protected disks and make images of them, but
it would be much safer to make so that only the person who owns the
games can play them. So this way no one can put the files on a web
page for example.

2nd Hand Items For Sale
**********

Items for sale include: Lynx Games,
ST Games,
Utilities,
PD Software,
CD ROMs,
Magazines,
Blank Disks,
Lots more stuff, please ask if you are looking
for a specific item, I may well have it!!!

I am sadly selling the Majority of my Atari equipment as I am moving
over to the Macintosh (with MMac) and much of it not usefull on that
machine. All software is original and comes with manuals, virtually
everything is the latest version available or very close to it.
Prices are negociable if you are buying more than a few items and
prices don't include P&P, I'm in Bristol if anyone is close enough to
pick up. I only have one copy of everything so mail me ASAP if
you are interested, just reply to this message.

**********

That's Write V3-The last version of this very powerful word processor,
can use (and comes with) Speedo Vector Fonts will no need for
Speedo GDOS, uptp 8 documents can be open, full spelling
checker and instant correction, macros, picture import and far
too many functions to list, a huge powerul beast of a word
processor, needs at least 2 meg and 2 floppy drives. cost 130
UKP, selling for 50 UKP.

Hisoft C Interpreter-Interpereted C so no waiting for the Compiler to finish,
complete with 2 DS disks and 340 page manual worth 50 UKP. 10 UKP

Connect 2.46-The leading Terminal package for the Atari, FULL
registered version inclusive of manual. 10 UKP.

Fastcopy Pro-The fastest floppy copier that actually works, highly
acclaimed by many magazines and used by almost everyone, if
you don't have it and copy lots of floppies then you really
should get it. 10 UKP.

Quartet-4 track song construction utility, uses samples as instruments
to create great tunes, like Sound Tracker but with an easy
interface. 5 UKP (10 UKP with STFM stereo output cart).

Stereo Master-Stereo sample editor, recorder and real time audio effects package, includes sampling hardware. 15 UKP.

Mastersound 2-Sample editing and recording utility, also has a mixing editor where you can create very simple songs from the sameples used. 10 UKP.

Stereo Replay-Stereo sound sampling and output at superb quality (upto 48khz) all within a GEM interface with superb editing facilities. A top quality proffesional package, cost 80 UKP. 20 UKP.

Tempus 2-The fastest text editor EVER, a good all round editor but especially great for fast editing of large files, almost 100% machine code for unbelieveable speed. 10 UKP.

View II-Install this program and it will allow you to double click on text, pictures, sound samples, archives and .seq/.dlt animations and have them displayed straight from the desktop with no extra software. Also includes a ramdisk, 8 UKP.

Ease 4-The highly acclaimed desktop replacement, allows files to be moved to the desktop, any key can be a hotkey, drag and drop support, displays files in windows, TOS programs run in windows, GDOS fonts can be used for display, display mode can be set for each window, file searching, copy functions can be passed to Kobold etc. All in all a very competent desktop. 20 UKP.

MagiC 4-Multitasking for any Atari with no slowdown! Give each program as much memory and processor time as YOU want it to have and still retain high levels of compatability. Will run virtually every GEM program and many more and even makes your computer faster when running just one program. 30 UKP.

Kobold 2.5-The fastest way to copy, move, format, backup & delete files. Improves over the GEM rate by many times, has the ability to record actions for editing and repetition at a later date. A highly useful tool for floppy and hard drive users alike, intergrates seamlessly into Ease. 25 UKP.

Ease, Magic & Kobold-60 UKP.

Atari CDs:

Squirrel 4x CD Rom Drive-External Drive (Toshiba Mechanism) with 2 SCSI ports, Stereo Phono Outputs, Headphone socket, Supports Audio Streaming direct to hard disk, multi-session, Photo-CD compatible, Perfect condition. 100 UKP or 180 UKP with all the CDs below.

Atari Mega Archive 2-The entire contents of the Umich archive as of May '95 around 2 gig of software in total. 15 UKP.

Suzy B's Atari Software Treasury-A 2 disk set of some of the best Atari software available. 25 UKP.

Crawly Crypt Vol 1-A top set of quality items from the Crawly Crypt
BBS. 15 UKP.

Crawly Crypt Vol 2-Another set of top software from the Crawly Crypt
BBS. 15 UKP.

Skyline-A compilation of German shareware along with some full
versions of shareware such as: OCR 1.3, Maxidat, Tempus Word
Jnr, GemFont, Idealist & Paula. 15 UKP.

Compo STe Power CD-Another selection of top German shareware along
with a few full versions such as: Maxidat, 7 Up, Gem View,
Original, Studio Convert & Adress. 15 UKP.

Skyline & Compo STe Power CD, 25 UKP.

**********
Blank (DD and HD) disk available, large quantities available please
ask for prices if interested.

Issues of ST Format 6-72 (with cover & subscriber disks), 1 UKP each.
Atari World (with disks) Issues 6,7,9 & 11. 1.50 UKP.

Most issues of ST Review & ST User also available with disks for 1 UKP
each, please ask fo the issues that you want.

1000's of PD software titles available, please ask for specific items
or ask for a list it is 700k in size but comes compressed to around
400k. It can also be downloaded by pointing your browser at
http://www.pwomar.demon.co.uk/main.tos

**********
GAMES!!!

Lynx Games, sadly most games come unboxed and without manuals but
they are are only 5 UKP each:
Zarlor Mercenary,
Gates of Zendocon,
Xenophobe,
Chips Challenge,
Slime World,
Crystal Mines 2.

All games are £0.50(+50p P&P Overall) each unless stated. Most games come
without boxes but with manuals. Huge discounts available if you want to buy
a large number of games.

A.P.B. £1,
Another World £1,
Archipelagos,
Atomic Robokid £0.80,
Axel's Magic Hammer,
Baal £0.80,
Back To The Future 2,
Backlash,

Bombuzal,
Boulderdash+Construction Kit,
Cannon Fodder £3,
Carrier Command,
Cruise For A Corpse £4,
Championship Water Skiing,
Damocles (Mercenery 2),
Dragon Ninja,
Dragons Lair 2 £3.50,
Eliminator,
Encounter,
Epic £2.50,
Final Fight £1,
Fire & Forget,
Fish,
Foundations Waste £0.80,
Future Basketball,
Future Bike Simulator,
Garfield-"Big,Fat,Hairy Deal",
Ghostbusters 2 £2.50,
Gremlins 2,
Hostages,
Hudson Hawk,
Indoor Sports,
Las Vegas,
Lemmings,
Licence To Kill,
Mercenery III,
Mig-29m Super Falcrum (Flight Sim') £3,
Mindbender,
Monkey Island (1 Meg Only) £5,
New Zealand Story,
Night Shift £2,
Operation Thunderbolt £1,
Operation Wolf,
Parasol Stars £1,
Populous & The Promised Lands £1,
Power Drift £1.50,
Power Up (Rainbow Islands, Chase HQ, Turrican, Altered Beast & X-Out) £3,
Precious Metal Collection (Captain Blood, Arkanoid 2, Xenon, Super Hang On) £2,
Rick Dangerous 2,
Risk,
Road Runner,
Robocop 3 £3,
Run The Gauntlet,
Shoot 'em Up Construction Kit,
Sleepwalker £2,
Soldier of Light (Not STe),
Star Wars,

Starray & Star Goose,
Story So Far V3 (Space Harrier, Live 'n' Let Die, Bomb jack & Thundercats) £2,
Super Space Invaders £1.50,
Superman £1,
Switchblade 2,
Switchblade,
Teenage Mutant Hero Turtles,
The Simpsons £1,
Triad Volume 1 (Defender of the Crown, Barbarian, Starglider) £2,
Turrican 2,
Venus The Fly Trap £1.25,
WWF Wrestlemania £1,
Wanted,
Xenon 2,
Yogi's Great Escape,
Zak McRacken and Alien Mindbenders (Lucasfilm Adventure) £5.

Kobold will do it for you and seeing as it is superb you should have
it anyway! Take a look at the demo version it may have the Set
Attributes bit still active, otherwise I have my copy for sale...

there e-mail address look at the respons of Jo Vandeweghe
>
>For anyone who does have it and uses it: Does it support CD ROM drives?
>Version 3.01 doesn't all too well.

The latest version of Neodesk (v4 release 5) supports CD ROM drives
quite well now. I haven't met any problems during the time I've used
it.

>AUTOBOOT of it? I have TOS 2.06 and with version 3.01 it won't autoboot,
>since it looks for DESKTOP.INF, while TOS 2.06 creates NEWDESK.INF instead.

Strange. I'm a registrated user from the beginning (Neodesk 2 on a ST
1 mb, TOS 1.04) until now (TT030 TOS 3.06) and it was always possible to
autoboot Neodesk. You are obvious doing something wrong.
AFAIK Neodesk doesn't look at desktop.inf to start.

Ah but this doesn't apply to MagiC5 though does it?
I did this with MagiC4, but MagiC5 has no #TSL line in it by default. At
least mine didn't :)
As for 99 out of 100. Lucky You :)

> g> You could use MagToRom (by Uwe Seimet). This uses the PMMU to try and

It doesn't come with MagiC. Although why MagiC couldn't come with memory
protection, god only knows!

I got it from Uwe Seimet. I can email you a copy if you want it?

Regards, Gary

# 3031. FS: ST Software

Newsgroup: comp.sys.atari.st
Date: 1997-02-12 00:00:00 UTC
From: Curtis Blanton <cgb9@ccddn1.em.cdc.gov>
Message-ID: <33023A33.34E1@ccddn1.em.cdc.gov>
Source record: 127868

I have the following ST software for sale:
(All games have orginal documentation and diskettes)

D-Day - STE compatible Wargame/arcade $5
Fire Brigade - WWII (Eastern Front) Wargame $5
Empire - Strategy Wargame $3
Warship - SSI WWII Naval Wargame $3
Just Another War in Space - Space War simulation $5
UMS (Ultimate Military Simulation) - Wargame $3
Ogre - Wargame $3
Computer Software Classics (Adventure, pong, Eliza) $2
LED Storm - arcade $3
Guild of Theive - Text/Graphic Adventure $2
Zany Golf- arcade simulation of Minature Golf $3
Falcon+ Mission Disk simluation $5
Carrier Command -strategy/3D simulation $3
F15 Strike Eagle simulation $3
Imperium - strategy - Won some award in Europe - $5
Silent Service - simulation $3

Add $1 for shipping (US)...

# 3033. Major WWW-page revision! (big Atari ST page!!)

Newsgroup: comp.sys.atari.st
Date: 1997-02-12 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <330229064cdbc2@sn.no>
Source record: 127870

I've recently spent a lot of time and hard work revising my Atari pages...

In addition to some new links I've added comments to just about every link,
describing what the actual link is all about, and like before all the links
are neatly organized so that you can find what you want quickly and easily.
The categories are;

-Soft/hardware dealers and manufacturers worldwide
-Hardware
-Software
-Software download WWW-archives
-Internet/communication software and support
-MagiCMac/MagiC
-Atari ST emulation on other computer systems
-MiNT, Linux, NAES and other alternative operating systems etc.
-Magazines, publications, disk-based magazines
-User groups/clubs/associations/support
-Other TOS based machines
-Atari ST newsgroups
-Other Atari ST related pages

...and of course links to my two other Atari ST related pages:

-FTP direct-access page (WWW version of the Atari ST FTP site list)
along with several powerful "file-search" options and a link to the
"Atari ST FTP site list".
-Beginners/essential utilities/information page which contains
all sorts of things every Atari ST user should have in his/her collection
along with the FAQs and other information, TOS fixes, CPX modules etc.

So point your browser to:

<http://www.sn.no/~hallvart/pages/atari.html>

and have a look. And while you're there you might want to have a look at my
other WWW pages as well. Comments and requests are also welcomed.

Hallvard

# 3035. Re: AutoSwitch Overscan

Newsgroup: comp.sys.atari.st
Date: 1997-02-12 00:00:00 UTC
From: please@no.spam.mail.here
Message-ID: <29130_please@no.spam.mail.here>
Source record: 127872

This message from sig@end.article to All came in on a wing and a prayer...

Hi Gerry!

>> A later development of Overscan is LaceScan, I have one fitted ATM but
s> I am trying Lacescan ATM.
s>
s> I find that I must have the switch set to the 'off' position before I
s> power up the ST, otherwise the machine won't boot.
Interesting, here once the ST has warmed up and then rebooting, the screen
dispay does go haywire sometimes.

I note that the hypertext mentions cutting the trace between the keyboard and
MIDI ACIAs connecting the RTS lines, this dodn't appear to be necessary on my
ST.

s> I also find that it sometimes gets confused about which res it's in, so
s> it won't let you change from Low to Med.
Agreed, sometimes a reboot is necessary. This method of accessing the res.
change isn't valid for MagiC/MagxDesk of course.

Also the med. res. emulation has a "prison bars" effect, but I put that
artefact down to unfamiliarity with the package.

s> Appart from that, it works; something I could not get the PD version of
s> overscan to do.
It's not bad actually, but there's insufficient/no info about some of the
options in the driver setup screen IMHO, also the lack of synch restoration
when using the hotkey res change is disappointing perhaps.

Quite a review I'm giving it, I would recommend it tho'.

Speak to 'ya later!

Yes. that's true.

> TOS 1.0 has always been in ROM.
> All other version are
> available /only/ to developers in disk form (legally, at least); end users
> can't legally obtain disk versions of TOS.

Well, not exactly.. In Spain I had TOS 1.0 on disk, and the same with TOS
2.0. You had to ask for them, and they were labelled "Language Disk" (as
was the original TOS 0.98). I have a beta of TOS 1.4 in front of me, and
it has the SAME part number that the original one, and the same copyright
notice.. maybe they copied the beta TOS to the original disks, maybe...
(Part number CA026062-001)

One time I asked Atari Espa&#65533;a for a TOS 1.4 and they sent me a spanish
beta version of TOS 1.4 and offered a german version of TOS 1.4 becouse
of some incompatibily with a piece of hardware. As it was solved with
spanish TOS 1.4 I din't ask for the german one.

I have some of those allready, so I'll check what is labelled on the
disks.

> OTOH, copyright law permits you
> to make disk versions of any TOS ROMs that you own for your personal use, so

I have one original 520ST (broken) with only 64K ROM. I'll check what the
hell this ROM contains...

You can run Thing, Teradesk, or NeoDesk (or any other alternate desktop - I suppose that, using MiNT and xaAES or oAESis, you could even get a replacement AES in there). Yes, it's an emulator - but it's transparent to the user, i.e., double-click a TOS app under Win95 and it runs - either in a window, or full-screen, depending on how you have configured that application.

> Sorry but as the demo I got was German and the page etc etc then I
>couldnt figure it out, But I certainly could not get an ATARI desktop
>on screen,

So which one did you run?

> Scuse me, but why do you keep mentioning no need for virtual drives
>when you talk about emulators? I have tried every ATARI emulator I can
>find and have never used a virtual drive yet?,

MagicPC uses a virtual drive; GEMulator (AIUI) requires a special TOS partition. If you've tried MagicPC you used a virtual drive, or you ran strictly from floppy-based applications. There's no getting around that limitation of that emulator.

If you're willing to mail the (bad) original disk to me, I think I still
have my Blitz Box in the closet; I can make you a working copy of my Sundog
in about 15 seconds. However, without the proof of purchase (e.g., an
original disk), I wouldn't do that. If you're interested, email me (and be
patient, I only pick up mail on the UUCP account once daily).

posted and mailed.

If OXO releases a PPP stack (that will work with my current stuff, like
Newsie) as well as Webspace, and if it will work properly with my ISP
(that's sort of an iffy proposition, sadly - every time I get STiK tuned to
perfection, Teleport changes the rules %^<<< ), I'll be more than happy to
plunk down the cash. However, if the setup isn't in English, and isn't
reasonably idiot-proof, the market will be very limited, IMHO.

I'm making the identification of "ORA" as Oregon Research Associates here.
If that's wrong, disregard all of the following:

>At that time they only had a TT in the office and couldn't see the
>same problem I was seeing when it was run on the Falcon. I think a
>new RSC file cured the problem in the finial version I received.
>If they do market a browser for TOS, probably best to wait for
>version 3 :). That seems to be their lucky number.

Well, from what I can see of the Amiga version, you can expect the setup to
be fairly idiot-proof. As for compatability - I can promise you it will be
test on a TT, a Mega STe, a Falcon, and a couple of older STs; we (Portland
Atari Club) have a variety of machines, and I've offered to perform some
late-beta torture for Termite ST (or whatever it ends up being called).

I have been using CyberSculpt and CAD3D2 on my Falcon all the time I
have owned it. Just use ST-Hi or Medium res and NVDI seems to cause
a crash when you pick the Superview in CAD3D2 and the 3D view in CS.

Isn't DA Vector more of a DTP package?

## 3044. Gem or Win95?

Newsgroup: comp.sys.atari.st
Date: 1997-02-12 00:00:00 UTC
From: Dan Cox <village1@lightspeed.net>
Message-ID: <330243F5.534A@lightspeed.net>
Source record: 127881

As far as I'm concerned Gem is the most straight forard operating system ever built. I know it runs on tos but you know what I mean. Win95 has all those stupid cascading menus. As one mac user I know once said(and, i think this applies to the atari as well), "I can produce on my mac, I can't produce on this...(pointing to her office ibm)". It just works! What a concept! Plug it in and go for it! You all already know this of course, but I feel this urge to tell the world. No configuration files to worry about or to screw up your auto.exe.bat.whatever ibm, just no nonsense computing.
Computing made fun, I should say.
Dan

# 3047. 14 Mb Falcon + Cubase Audio F/S

Newsgroup: comp.sys.atari.st
Date: 1997-02-12 00:00:00 UTC
From: Gustavo Comezana <comezana@math.psu.edu>
Message-ID: <01bc1935$928e6d60$6611ba92@pirulo.psu.edu>
Source record: 127884
Cross-posted to: comp.sys.atari.st,misc.forsale.computers.other.misc,misc.forsale.computers.other.systems

For sale as a package. I will *NOT* consider breaking it up:

Atari Falcon, 14 Mb RAM with detached Atari Mega keyboard included,
built-in 80 Mb
IDE HD, 1.44 Mb FD, excellent condition.
Practical Solutions cordless mouse (will throw in standard Atari mous if
you want it too).
Screenblaster (SW & HW).
Magic 4 (Alternative multitasking OS).
MultiTOS
NVDI 4 (VDI replacement)
Speedo GDOS
Diamond Back (excellent backup program)
Diamond Edge (HD diagnostic and repair)
Cubase Audio (including dongle and HW clock, of course)
True Paint (True Color paint program)
STalker (Communications)

Reason for selling: sold out to Bill Gates (and Gemulator and my Mega STe
suffice
for my current Atari needs).

Location: central Pennsylvania
Cash and carry: $800, otherwise
U$S 850 + shipping + COD charges (FIRM! if you don't like the price, don't
bug
me -- move on to the next ad).

All SW with manuals; will throw in a 14" AT&T VGA monitor if you want it
(not wonderful,
but it works well enough, at least for starters), and cable adapter.

If interested respond by e-mail to comezana@math.psu.edu. Serious inquiries
only.

Gustavo Comezana

Hat jemand pppd mit einer dynamischen IP-Adresse am laufen? Was ist da zu beachten? Wo muï¿½ was eingetragen werden? Bei mir bleibt ppp bei Protokollaufbau hï¿½ngen.

Und woran kann es liegen, das diese Zeile hier:

route add 127.0.0.0 lo0

beim booten zu einer Fehlermeldung fï¿½hrt ('permission denied'). Wohlgemerkt kommt diese Fehlermeldung noch vor dem einloggen beim abarbeiten von 'rc' und Konsorten.

Tschau, Christian

> auto.exe.bat.whatever ibm, just no nonsense computing.
> Computing made fun, I should say.Dan
Totally.They don't make real operating systems anymore.They don't even program efficiently anymore,they just make these huge 68 meg games filled with crappy code and big mpegs and gifs,and theyre not even good games.Im sorry to say that the days of respectable operating systems and games are pretty much over,except for the occasional Jeff Minter game and the like.My STe with 16mhz accelerator and TOS 2.06 still runs so much better than this awful Win 95 on my 486/133,a computer that is about 20 times faster.Windows is embarrasing,it has bugs in it,and it has repetitive functions,like Windows Explorer,what the heck is that about?I can already "explore" my files,its called "clicking on the icons".Duh.Does an operating system really have to be this huge?TOS was only 192k.Then that stupid little "Start" button and all the redundant crap in its little pop-up box.Ill tell ya,Its only because I have a good sense of humor that Im able to stomach it all,but I realize that there is little alternative anymore,so I have a PC.However,I will always have my STe too,and use it when I can.I use it still for games and *fast* web browsing when I dont need all the bells and whistles on the web pages.Stik is SO much faster than Internet Explorer,even when I.E. is in text mode.Windows 95 is like some kind of ailment.I think TOS was the last real GUI.I want to get a Falcon so badly when I have the money just so I can say I own the last and most powerful "real" computer.And in the mean time,I will enjoy my PC,I do enjoy it,when Windows isnt bugging out,or my .dll files havent been twiddled with by the last game I installed,or when I dont get a ROM timeout on my Maui card,or when the mouse driver doesnt disable under DOS,or when I dont have a shortage of conventional memory,and when Im not waiting for a minute and a half for the behemoth operating system to boot up,and all that.But lord knows if I had a real option,such as I would have if Atari knew how to advertise,perhaps,then I would choose it,anything else would have to be better.I just had to get that out of my system after I saw this post.Please,no negative e-mail,if you dont like what I have said,then exit your browser and have a nice cup of herbal tea and forget about it.This isnt about you,its about me and how I feel.And anyway,most of you probably agree.And one more thing,Monty Pythons Flying Circus is so much better on the ST than the PC,and so is any other game that came out from 1985-1992 or

so,which is when people still knew how to make a descent game,so I would really be depressed if I ONLY had a PC and had to play earlier games in CGA and Monochrome mode with that horrible PC speaker blaring in my ear with bleeps.Gem or Win 95? Gem please,thank you.-Satcom2

# 3053. Atari ST System For Sale

Newsgroup: comp.sys.atari.st
Date: 1997-02-12 00:00:00 UTC
From: Rich Salkin <rsalkin@worldnet.att.net>
Message-ID: <3302934B.6310@worldnet.att.net>
Source record: 127890

I Have a complete Atari 1040ST system for sale. Price is right!
System includes 1040ST with 4 meg. ram, hard drive, color monitor,
printer, modem, and TONS of software. Some titles: Dungen Master,
Bubble Ghost, PageStream, and many more. If you are interested, I
will send you the complete list of hardware/software.

Please e-mail me at:

rsalkin@worldnet.att.net

## 3054. Speeding up CAB?

Newsgroup: comp.sys.atari.st
Date: 1997-02-12 00:00:00 UTC
From: uq086@freenet.Victoria.BC.CA
Message-ID: <E5IHz1.FIB@freenet.victoria.bc.ca>
Source record: 127891

I guess the subject pretty much says it all. I recently downloaded cab_030 but any speed increase is nominal. I am mainly interested in speeding up the display and I am curious whether NVDI would be useful. Thanks.

The problem is just, that CD-roms don't use the VFAT-filesystem - they use
the iso9660 with some extensions. (I think they're called RockRidge)

Dear BYTE,
I really enjoy reading your magazine, although I think you
use a bit too many longwords...

: (crap, crap, very crap) (...)

Yeah, I just recently saw the docs on the VFAT fs in some Linux Howto
file... Tjeez! It's a classic Crap Microsoft Backward-compatibility Patch!
It uses additional entries in the dir table which are sort of masked of from
the normal DOS fs to store additonal characters for the file name. That's
why W95 locks it's filesystems: to prevent properly written programs like
Disk Doctor from messing up (ie. fixing) the "crap" extra dir entries...
Unbelievable...

Source record: 127898

I've been thinking about this. Perhaps someone who suffers from unreliable booting might like to try it and see ...

1) Disable pre-emptive multitasking in MAGX.INF (remove _TSL). This should have been done anyway.
2) Disable all the stuff in AUTO\APPS (or whatever you've called it).
3) Disable any "autorun" programs your desktop program may have installed.
4) If you use TSLICE.ACC then use AutoSort to make it the last entry in your acc folder. If you use xcontrol or similar then use AutoSort to make TSLICE.CPX the last one in the cpx folder.

I use MagiC 2 which is pretty solid but my system did used to have its moments all the same. It may just be luck but it does seem to be less quirky now, especially since re-ordering TSLICE to be "as last as possible". Maybe its my imagination but it's worth a shot?

From: bjr@edison.ebicom.net
Message-ID: <5dr9pr$tf7@einstein.ebicom.net>
Source record: 127958

Okay...here's my view of all this...
Now there will hopefuly be compitition for WWW on the Atari...
This is great!
Less than a year ago there were post after post saying "I'll Pay Top Dollar To Browse the Web with my Atari!" Well...now we can...and with other options coming...we'll soon have a choice. It's that simple. If you don't want to risk some $60.00 on Web Space...wait and see what those of us who do will say about it.

I for one, plan to give it a try...
I'll give OXO a chance to prove whether or not they'll commit to making their browser 1st class. One fact is for sure...if no one supports them early on...they'll find other projects (platforms) that are more worth while for their efforts. I think it is important that we at least give OXO a chance...their browser might be killed by the compitition, but seeing some demand left in the Atari market might lead them to developing other products for TOS. We'll see if they can, and will be good developers...but they do need some kind of support early on...or we'll not see much of anything happen. Surely, OXO will not release a product that simply doesn't work... If they do...well...I guess it's gonna be a long hard road for them. I suppose the bottom line is...I'd like to see OXO give it a good try...and as long as they are honest about release times...and the functionality of the products...I'll do my best to support them. That's the key...just be honest, and I think "most" TOS users will be paitent and supporting.

I don't forsee dropping use of CAB anytime soon...
I'll still be making donations and contributions to the STik team when it is in my power to do so. Certian segments of the STik team have really done a class A job on the project...and progress has been relatively quick. There are some weak areas as well... Hopefuly, by supporting all of the possible internet options this early in the game...pressure will begin to see major improvements over-all. So lets do what we can to prevent an early monopoly... at least wait till some compition has pushed some major advances before crowing someone king of the TOS/NET market.

It makes sense...that if a guy is running with a foot-ball, and someone is trying to catch and clobber him...he'll turn it up and fight a little harder :) But then again...it does take more than one team to play a decent game.

Brian

Simple enough to check. Just run plain TOS. Set your
machine to the highest truecolor mode you can support.
If you have an IDE and SCSI, transfer about 5 or 10 megs
of data to the SCSI disk at once. Check any applications for
errors (they won't run). Another check. with the same setting
record some audio onto your SCSI disk with most any D2D app.
Stick on a set of head phones and listen for clicks in the
recording. An unbuffered or improper SCSI/DMA patch will
generally show up when doing these things. If you still have
ocassional errors with an app, leave it on the SCSI disk and
launch it from TOS (with out a bunch of fancy stuff in the
auto). If it works, you may have a problem with MagiC compatibility.
If it dosen't, you made need a buffer modification installed
or upgraded. Generally when the SCSI writes bad data, the
data stays bad:). So you should be able to have consistancy when
testing this problem. If it is inconsistant, then it probably is
not a SCSI problem.
For those that have not read the Nemesis manual, it looks like
they have come up with their own buffer unit. Reading through
the docs it is hard to tell what chip they are using, but I did
notice one mod they include that I performed over a year ago

that solved all my SCSI problems. They bypass the clock trace on
the mother board to the DMA and route a seperate wire from their
buffer to the clock in of the DMA. I used shielded low noise
line for my mod and haven't had SCSI problems in quite a long
while, even with the accelerator and fast ram I have installed.
I have NEVER experienced instability of the IDE bus. As a matter
of fact, the faster you run the machine, the faster the IDE transfer
goes up. Nope, not a problem one here.

Mike

The only help for this is to commentout the #_TSL line from MAGX.INF and to
use the TSLICE.CPX to setup the Time Slice proportions. Not infallible, but
I boot just fine 99 times out of 100.

g> You could use MagToRom (by Uwe Seimet). This uses the PMMU to try and
g> protect the MagiC code from being overwritten. Since using it, I seem
g> to get less crashes (it doesn't help with booting though)!

I've heard that this utility exists, but I didn't get it with my Master Disks
for v5.03 - where did you obtain it?

e> drive corruption, I have the following questions.
e>
e> I have an early STE, serial no A19 B300 53nn, one of the shortlisted
e> with duff a DMA chip.

Sounds right, unfortunately. It's strange that Atari stated that every
machine with the faulty DMA had been fixed a few years ago though... <g>

e> I am getting a hard drive soon from an ex-Atarian with information
e> already on it. Does the corruption affect BOTH the file and the fat?
e> If so, how do I avoid it writing over anything other than the test
e> file when checking if I have this problem?

Not sure tbh - I got mine fixed before connecting my HD.

I'd assume it does affect both, so copy all the files from one partition onto
another as soon as you start up (ought only to take a couple of minutes) and
restrict your testing to just that partition. Apparently the effects ought
to be noticeable within 30-45 minutes IIRC.

If you have problems, see if you can zero the partition afterward.

The best person to contact to fix it might be the guy that used to run the
Atari Helpline and did their tech repairs - luckily for you he's in Edinburgh
the last I knew:

# 3070. Falcon 3D prg?

Newsgroup: comp.sys.atari.st
Date: 1997-02-12 00:00:00 UTC
From: Steve Scott <buskers@melbourne.DIALix.oz.au>
Message-ID: <Pine.SV4.3.91.970212150600.9007A-100000@melbourne.DIALix.oz.au>
Source record: 127963
Cross-posted to: alt.3d.studio,comp.sys.atari.st

Hi, since my Ex ran off with my STe, I've had to upgrade to a 14meg Falcon030 ( aint life a bitch).

Problem, I really need to do 3D modeling (I'm a puppeteer) and rely on CAD a lot, however, 'Cyber' is no go on the Falcon, 'InShape' still needs some work I think (or Docs), and who knows If I should be investing in DA's Vector?

Advise is surely sought!

Steve

j> from DC-4MHz, you could actually run it slow enough to examine the
j> bus etc.
j> with a multimeter!!!
Wow!!!

I remember an ICL mainframe which you could tell how it was performing during processing by the sounds it made (it had a speaker that was wired to the CPU/RAM in some manner and whined based on how it was running!)

## 3072. How to make all files "readable/writable"?

Newsgroup: comp.sys.atari.st
Date: 1997-02-12 00:00:00 UTC
From: please@no.spam.mail.here
Message-ID: <29074_please@no.spam.mail.here>
Source record: 127965

*Hi Hallvard*, on 11 Feb 97 you wrote: ...respect, brethren

h>
h> Some time ago I changed the file status of several files/folders/sub-
h> folders to "read-only", but I'd like to change them all back into
h> "read/write".
h> Is there an easier and more effective way to do this than to "manually"
h> edit the status of each file?

Shame on you, Hallvard B^{)

The methods you're using are over-complicated. Use a file-selector like
Selectric or UIS, select a load of files and type Control-I (in Selectric) or
drag them to the tick button in UIS and select Read/Write. Selectric seems
to deal with them all individually, but UIS will act on all files in one go.

I think the only thing Gemulator gets running is
the user to a PC store:). Last I was told at the
Sacramento show, it was suppose to work, but it
dosen't. That was right from Derrik's mouth.

It might have been a bug in the 6.1 demo. Please try the demo of the
current HDDRIVER version, i.e. HDDRIVER 6.2. It's available from
ftp://acp5.chemie.uni-kl.de/pub/atari/hddriver62_demo.zip or
http://acp5.chemie.uni-kl.de/seimet/hddriver_english.html.

If the new version still reports write protected partitions please send
me an e-mail.

L> If Tony is like me he only used the ttp one time! And that was to unarc
L> arcshell.prg so he wouldn't have to do it anymore!

Weren't you the lucky one! The first time I looked for an archiver online
(many years ago) the ARC file was ZIP'd, the ZIP file was LZH'd, the LZH file
was ZOO'd and the ZOO file was ARJ'd. I never found the ARJ executable! B^{)

Eventually someone had the presence of mind to make the archive
self-extracting...

Actually, Tony uses the commandline regularly whenever he gets his QWK
packets from the BBS, but because the parameters are passed by the QWK reader
it's easy to forget what's hapening... I'm not suggesting he should type in
the commandline every time...

EMail already sent - no reply yet...

mn> BTW: the 4Mb limit was broken lone time ago, was quite expensive then.

For an ST, yes. In the UK nothing was available for the Mega STe (ie MarPet
Xtram +8). I did hear about a German board, but I think it was about 200ukp
for the bae board, which was out of my league.

£86 is quite a high price, but I think I'd be prepared to go for it - unless
I magicaly find the money for a TT (which I doubt very much...)

I believe that the cable is a straight through 36-pin to 36-pin D
connector. If you look in your manual, you can find the pin-out
of the port (in the back). All the ground wires may be soldered
together, and the others are just straight through connections.
(I think they're 36-pin; I'm not quite sure - as I don't have
my manual next to me, I'm just guessing).

# 3090. GAMES TESTERS WANTED

Newsgroup: comp.sys.atari.st
Date: 1997-02-13 00:00:00 UTC
From: D.E.Jones@ex.ac.uk
Message-ID: <D.E.Jones-1302971120110001@144.173.2.235>
Source record: 127777

Hi all,
I am looking for some games testers so that my new games will be as compatible as possible. To start with I need some ST owners. If anyone is interested then please send me an e-mail. Also could you let me know the details of your computer type, memory size, tos version etc...
Thanks.

Dan Jones.

From: Ralf <gesellen@namu26.gwdg.de>
Message-ID: <3302F95B.41C6@namu26.gwdg.de>
Source record: 127778

The ST has an ASCI Interface for HD - most similar to the SCSI standard.
Yet you'll need an plug-in interface called "the link" to use a common
hard disc (about 60$). As for universal driver software: try Hushi or
SCSiTOols or anything of that brand...
anyway - good choice, cheap price! (Once, I paid 1700$ for an ST)
/ralf.

It was in, AFAIR, the last issue of ST Format. I didn't actually use it because I was already registered. I don't have it to hand right now, what with being at work, but I'll try to remember to look it up for you tonight.

Regards
Martyn

>:>what's the name ?
>
>no name, because it is non-existent.

Well, Destruction Imminent is a wolf-clone. It is shareware, and
is available from Goodmans, IIRC.

KillThings was under development, but has probably been stopped
- the source code may well be released as freeware in the near
future.

There is also an STFM compat substation clone, but this is of
even lower quality than substation (which is in no way comparible
to doom)

>:>do you have it ?
>
>no

I've got previews of the above...

>:Substation is an excellent Doom-type game.
>
>wrong, it is a Wolfenstein clone (but without t-mapping! although
>wolf didn't really have tmapping, it is better than the sorry shading
>of substation)

I agree. Substation is lame, IMO. Gameplay is ok, but all the walls
look identical which is very disorientating....

>:You can get a copy by calling Toad Computers at 1-800-448-8623
>
>Some people are trying to make a doom-compatible engine for the falcon.

Try http://www.shareware.com/ and enter the string 'fastcopy', making sure you set the 'platform' button to 'Atari'. If all else fails, FaST Club in the UK still sell the commercial version of Fastcopy Pro - try http://www.compulink.co.uk/~stclub/

>You can run Thing, Teradesk, or NeoDesk (or any other alternate desktop - I

Haaa I tried CAB and a couple of other things, it seemed to run faster than gemulator, but as gemulator gave me a desktop, ie: green background and icons :) then I opted for that,

>the user, i.e., double-click a TOS app under Win95 and it runs - either in a
>window, or full-screen, depending on how you have configured that
>application.

Right, then its the configuring it where I have fallen down, English documentation is eagerly awaited :)

>> Sorry but as the demo I got was German and the page etc etc then I
>>couldnt figure it out, But I certainly could not get an ATARI desktop
>>on screen,

>So which one did you run?

ATARI desktop is what I was looking for, you know, the GEM yukky green black and white one <smile>

>> Scuse me, but why do you keep mentioning no need for virtual drives
>>when you talk about emulators? I have tried every ATARI emulator I can
>>find and have never used a virtual drive yet?,
>
>MagicPC uses a virtual drive; GEMulator (AIUI) requires a special TOS
>partition. If you've tried MagicPC you used a virtual drive, or you ran

Nope, I have the latest demo of gemulator running with a tos 206 image, the only file used is the actual gemulatordemo.exe and the tos image, to double check this, I removed every other file associated with the demo, just gemulator and img and i get full screen no time limit and can run anything I want, including STOS, I have full access to all my PC drives and CD? no special partitions or virtual drives, hence my question?,
I also have the FULL version of gemulator running, but because I dont have the tos roms I am forced to use MagiC503e as tos img does not work with the full version, again only the gemulator exe is needed, no

virtual drives or anything?
Unfortunatly STOS won't run under MagiC (yet) hence having the demo
installed,

But I like the idea of simple being able to click on a ATARI program
and it runs, rather than run the emulator, then run the program, if
thats the case then TOSTOWIN sounds good,

>strictly from floppy-based applications. There's no getting around that
>limitation of that emulator.

Never tried MagicPC but as for gemulator, I dont see any limitations,
the demo is fast under full screen directx rather than in a window...

>The ones I have founds give an error when I try to use them. Am I doing

What kind of error?

>anything wrong? What determines if a file is Bad Mood compatible or not?

The newer versions of BAD MOOD have no built in textures, but use the
real ones from the WAD. If the WAD has no textures (most of them don't)
you'll have to supply the name of an extra WAD that does.
The unregistered ShareWare WAD should be fine in most cases, I think.

IWADs are complete WADs with textures and are usually several Mbyte.
PWADs don't have any textures, but rely on a proper IWAD being available.

This is all described in the documentation.

hmm I personnaly think that you can not install Mintnet on a 1meg
machine.
2, I would guess you don't have a harddrive for your st.
therefore, I wonder why you want to connect them.
The only interesting way to use your st linked with your linux, is to
use the ST just as a terminal.
If it is the case and since you don't have enough memory for the st,
just connect them with a software like connect on the st.
HOWEVER, PPPKIT MIGHT work. not sure at all though, but for sure it
requires less memory than mintnet.

Yes, *technically* it is different, but the gameplay, and the basic
concept of the game (3d first person perspective free environment)
is the same in all the games.

>:There is also Running for the Falcon. What would you call that? A Wolfdoomed
>:clone or a Doomed wolf clone? :-)
>
>I have never seen Running.

Running has textured walls, but not floors or cielings. It does have
different heights though, and can have walls at arbitary angles (not
sloping, I mean doom style not wolf-blocky). It has depth shading
(rather coarse in the demo I've seen compared to BM). I'm not sure
how it is working, but I guess its a BSP tree... I guess it is
more of a Doom clone than Wolf, although it does lack the floor/ceiling
textures (for speed).

Hmm... Idea!
Since Neon has been released on OS/2, the accompaning docs/manual are in English.
If few changes were made in the ported version, maybe you could use the OS/2 manuals?

## 3106. Papyrus 4?

Newsgroup: comp.sys.atari.st
Date: 1997-02-13 00:00:00 UTC
From: lais@cs.man.ac.uk
Message-ID: <5dvb1b$i8q@m1.cs.man.ac.uk>
Source record: 127793

I tried the demo of Papyrus 4 recently. I thought there was a more ragged feel to it, not as refined as version 3 (which I use). Personally I don't like the new EnhancedGEM dialogs, and the way they were displayed all squashed to the right side of the screen at first. While I'm being picky, I don't like the new separator lines in menus, or even the new information dialog! Oh yes, also, it looks like the box surrounding the left tab icon is one pixel too low!

I know this sounds petty, it's just that there's something about it that seems out of balance. The only thing I did like was the substantially faster scroligng speed - probably not enough to justify an upgrade, although that 500 font CD is tempting...

What does anyone else think?

You should never switch on your computer without NVDI! It will speed
up all graphics and therefor make CAB much more justice. After
having tried NVDI you can't live without it.

Well, I'm happy development continues on it, of course. Personally, I always hated the large size of the tool bar across the top of the screen, and the even bigger tool bar in the newer version really frustrates me. What a waste of screen space. I know other people like having this faster access to certain features, but I like being able to see more of the page. I wish Papyrus would allow us to select what tools to put on the tool strip, then we could have a tool strip as small as we watned by simply choosing fewer tools to display. I know this would be a major pain to implement in the program, but if they hope to compete on other platforms (as they say they intend to do), then this will be a necessary feature, as all the majors have this feature now.

A lot of people had been waiting for the expanded color support of the new verson, but that is a feature I do not use. So, like you, I mainly will benefit from a speed increase were I to upgrade. To be honest, I always enjoyed the speed of the older Papyrus. I thought it was incredibly snappy (especially considering the hardware I have it running on).

If anyone has the following for sale or trade or ?,e-mail me please.For the ST,or STe:

Shocker 2 trap dictionary (codes for Shocker 2)
Arnorath
Rainbow Islands
Parasol Stars
Sheer Agony

Once I have these 5 games I will have a sense of total completion with my game collection,and beliee me,I could use that.Ive been obsessively collecting for years now and I want to stop.I have plenty for trade,and even to copy,when appropriate.

Source record: 127806

Hi, I just released my first program!
It's called Clipboard+.
Very simple, easy to use, comes in english and french.
It's a little accessory that allows you to work easily with your
clipboard. Clipboard+ is very compatible, Works under TOS, Magic,
Geneva, Mint, Stonx and all resolution.
the tools are not numerous, but useful:
View, Rename, Export to CAB.
It takes a very small amount of memory as well.
Take a look on my page, it's already available. :)
Bye and enjoy :/ I hope :)
(english and french doc, if a german is reading this please, contact
me, I want to do it in german as well.)

Hello,

Pour tous ceux qui connaissent et apprecient ce jeu (soit, si
j'en juge par les lettres que j'ai recues depuis deux ans, une trentaine
de personnes seulement), sachez qu'une nouvelle version a ete uploadee
dimanche dernier sur le site du cnam. Cela dit, je vois qu'elle n'est
toujours pas i¿½ sa place dans le directory Falcon/Games...malgri¿½ le
mail! Alli¿½ Ludovic?!

The last version of SBM (SBM_103.tos) has been uploaded to
ftp.cnam.fr last week-end. It seems it's not yet available, but you
can try, I trust Ludovic Rousseau, he should do what must be done..

MB.

# 3121. Re: Doomcloon for Atari-st

:>Magnus Kollberg <emwoll@emw.ericsson.se> wrote:
:
:>:> :Substation is an excellent Doom-type game.
:>:>
:>:> wrong, it is a Wolfenstein clone (but without t-mapping! although
:>:> wolf didn't really have tmapping, it is better than the sorry shading
:>:> of substation)
:>:
:>:He did say Doom _type_ game and you could say that it is, can't you?
:>:The plot is about the same and they present the world in a similar
:>:way. Most people refer to Wolfenstein clones and Doom clones as the
:>:same thing.
:>
:>not true. wolf is really different. no deifferent floor/ceiling levels,
:>no real t-mapping, no BSP but raycasting etc etc.
:
:Yes, *technically* it is different, but the gameplay, and the basic
:concept of the game (3d first person perspective free environment)
:is the same in all the games.

so Quake is a doom-clone? nah...

:>:There is also Running for the Falcon. What would you call that? A Wolfdoomed
:>:clone or a Doomed wolf clone? :-)
:>
:>I have never seen Running.
:
:Running has textured walls, but not floors or cielings. It does have
:different heights though, and can have walls at arbitary angles (not
:sloping, I mean doom style not wolf-blocky). It has depth shading
:(rather coarse in the demo I've seen compared to BM). I'm not sure
:how it is working, but I guess its a BSP tree... I guess it is
:more of a Doom clone than Wolf, although it does lack the floor/ceiling
:textures (for speed).

If this is the case, I would consider Running more a doom-clone, than
a
wolf clone.

any screenshots of running available, sounds interesting.

That's an interpretation of copyright law worthy of Bill Gates.

If you own the ROMs, you have the right to "fair use," and that includes
copying them to RAM (or even to disk, as long as you don't give the disk to
someone else or sell it).

If it's just a sendmail client, I agree. But (and I speak as both an end user and former Netscape tech support guru) putting a complete mail client into a Web browser is, IMHO, not only a waste of drive space, it causes the quality of the both the browser and the mail client to suffer. You end up with a double-thick slice of bologna instead of two nice filets mignon.

And putting a newsreader into a Web browser is an excercise best left to AOL. Anyone who doesn't know my opinion of AOL is advised to refer to my opinion of MickeySlop. <G>

This is an outstanding audio player, for anyone who hasn't tried it yet -
highly recommended.

I would request one change, however - for most people, I think defaulting to
single-play mode is better than looping forever.

Interesting you should mention it. That's the game that I believe all
the future head on adventure games were based on. Much like the eye of
the beholder series from ssi/tsr. My copy quit and so did the backup.
I got another copy from a guy who has literally thousands of disks in
organized filing cabinets. It worked on his st but crashed on mine. I
think it may be alittle buggy. At any rate you can email me if you want
it.

>
>What does anyone else think?

Must admit that most of the above had passed me by. I bought the
upgrade because occasionally I wanted to use it under MiNT and 3.64
(?) had memory problems with MiNT. I originally had 3.58 which was
fine except that the search and replace was missing a few essentials
and it occasionally did weird things with graphics (particularly when
printing), which prompted me to upgrade.

I confess I am a little irritated as both of the upgraded versions
I've bought have had stupid bugs which have crept in with the changes.
So 3.64 had the aforementioned memory problems with MiNT and stopped
liasing properly with the 1st Word converter properly. 4 still has the
latter problem and now crashes if you try to open a text file :-(

And still no online help :-(

Interface-wise, the new toolbar came as a slight shock, but I'm now
used to it. You can also turn it on and off completely with ALT-L if
you want more text area while working. I did occasionally think the
old versions had more windows than necessary, which you tended to
leave open as there was rather too much clicking involved in getting
them back. I kind of like the way you have most things readily
available all in the one window. Downside is that it's lost the
ability to change text to lower case as ALT-L was the shortcut (if
anyone's discovered a replacement I'd love to know...). Doubly
annoying as ALT-G still capitalises text.

I'm also not convinced about separating text styles from paragraph
styles, it seems an added complication to me.

Before anyone gets the wrong end of the stick, as the above seems to be wholly negative, I ought to point out that I still think it's pretty wunnerful, certainly the best WP I've used on the ST (and I've worked my way through several programs, including 1st Word, Write On, Calligrapher, and tried others such as Wordflair, Marcel, even a Protext demo which didn't last long... In general Papyrus behaves sensibly, does nice things with fonts etc, uses paragraph styles (something which is essential IMHO) and has reasonable import/export options (ie RTF which seems to cover most bases, in particular Psion Word files). I can happily use it to do some jobs for which I would previously have used a DTP package.

The font CD is a nice touch, but as I don't have a CD-ROM drive I haven't actually used it yet.

On balance I think the upgrade was worth it, YMMV. It's also nice to know it's still being developed.

TTFN
John

## 3131. Cubase

Newsgroup: comp.sys.atari.st
Date: 1997-02-13 00:00:00 UTC
From: Anne Adamsky <annie.bob@worldnet.att.net>
Message-ID: <3303D84C.7232@worldnet.att.net>
Source record: 127818

HELP!
I am writing in for my brother (no e-mail) who's version of Cubase for Atari keeps crashing - he needs to get version 3.0 to try out on his system to check and make sure that it's the software not the hardware...does anyone know how to get a 'used' copy of this (cheap, in other words). Any info ASAP would be great, he is only here visiting for a couple of weeks.
THANKS!
Annie

## 3132. Atari Lynx Stuff For Sale!!!!!!!

I am selling my Atari Lynx and the following games and accessories:

APB
BLOCKOUT
BATMAN RETURNS
BLUE LIGHTNING
CALIFORNIA GAMES
CHECKERED FLAG
CHIPS CHALLENGE
ELECTROCOP
GATES OF ZENDOCON
GAUNTLET
HARD DRIVIN
HYDRA
KLAX
MS PACMAN
PAPERBOY
PINBALL JAM
PIT FIGHTER
ROADBLASTERS
ROBOSQUASH
RYGAR
S.T.U.N. RUNNER
SHADOW OF THE BEAST
SHANGHAI
TODD IN SLIME WORLD
STEEL TALONS
VIKING CHILD
WARBIRDS
XENOPHOBE
ZARLOR MERCENARY

AC Adapter
Car Adapter
Deluxe Carrying Case

Bid High to make sure of recieving games! I will knock down price for
people who buy more!!

To check on current bids, check out my page:
http://msm.byu.edu/complab/joshuam/lynx.htm

Bids and questions to: 0jmorrel@msmlab.byu.edu

The Lynx II comes with the Original box. All games come with Boxes and Manuals. I am conducting an auction, so the highest bidder wins. Bidder will send me a money order for shipping and merchandise before items are shipped.

[Image]
Welcome to my Atari Lynx Auction page!!
I am currently conducting an auction of the following Atari Lynx items. I will post all bids daily, so keep checking my page often!!
All games come with boxes and manuals. Here are the games:

---

APB $5.00
BLOCKOUT$5.00
BATMAN RETURNS$5.00
BLUE LIGHTNING$5.00
CALIFORNIA GAMES$5.00
CHECKERED FLAG$5.00
CHIPS CHALLENGE$5.00
ELECTROCOP$5.00
GATES OF ZENDOCON$5.00
GAUNTLET$5.00
HARD DRIVIN$5.00
HYDRA$5.00
KLAX$5.00
MS PACMAN
PAPERBOY$5.00
PINBALL JAM$5.00
PIT FIGHTER$5.00
ROADBLASTERS$5.00
ROBOSQUASH$5.00
RYGAR$5.00
S.T.U.N. RUNNER$5.00
SHADOW OF THE BEAST$5.00
SHANGHAI$5.00
TODD IN SLIME WORLD$5.00
STEEL TALONS$5.00
VIKING CHILD$5.00
WARBIRDS$5.00
XENOPHOBE$5.00
ZARLOR MERCENARY$5.00

Check out Kurt Olson's Lynx page for reviews on each game!!
[Image]Click here!!!
---
I also have the following accessories for auction:

Lynx II$5.00
Deluxe carrying case$5.00
AC Adapter$5.00
Car Adapter$5.00
---

Bid high!! If you buy more, I will knock off some from the price!!

Please send all bids or questions to:
0jmorrel@msmlab.byu.edu

I reserve the right to make the final decision on selling price. I will calculate shipping, and buyer will send me a money order for shipping and equipment before they are shipped.

# 3134. GIF, JPEG scanning service. FREE OFFER! A pictures worth a thousand words! (PrhHpX)

Newsgroup: comp.sys.atari.st
Date: 1997-02-13 00:00:00 UTC
From: scanning@XXX1324noreply.com
Message-ID: <#INOCCgG8GA.141@uptgmsnb01>
Source record: 127821

Why don't you print or save this info in case you need it in the future?

Hello Friends,
It's time to take full advantage of the online medium by having your photographs scanned today! Once your pictures are scanned into one of three formats (GIF, JPEG, or BMP) you can do many exciting things with them.

-You'll easily be able to attach them to emails and send them to people your chatting with online. No more having to try and explain what you look like!

-You can also use your photos in all kinds of fun projects: build web pages; design your own greeting cards; make personalized stationary,desktops, and screen savers- the list is endless!

- Scan pictures of yourself, your pet, your vacation, or whatever you choose!

Cyber Services will scan ANY photograph, drawing, magazine clipping, or other artwork to an image file, and email or US mail it (on disk) back to you within 24 hours of its receipt. (You must be able to receive file attachments to get your file(s) via email. Check with your ISP if your not sure.) PRIVACY & CONFIDENTIALITY ARE ASSURED. You'll also receive helpful technical tips on everything from renaming your file to saving time when sending it to people via email.

We scan all our images in 16.7 million colors for best quality. For just $1 extra we can enlarge or crop your photo, blur out a body part, or ad text (such as your name or email address).

Best of all, as a FREE GIFT to you (limited time only), IF YOU CHOOSE TO, we'll reserve you a FREE PAGE (or pages) in our "Internet Date-Site" (Now under construction!!!). This web site contains pages classified by local area and sexual preference. There's also a erotic image gallery (must be legal age to enter), and a "special interests" section. That's right, you can have your own page on the internet for just $4! (Note: You're responsible for answering your dog's email!) Your free page(s) will include any or all of the following: Your scanned photo(s) (You pick which ones- You can have some, none or all of your photos posted on your page), your email address with an icon visitors can click to send you mail, and a brief profile about you. We'll remove or modify your page, at your request, at anytime! When the "Date-Site" opens for business, you'll receive an email notifying you of the address of your personal web page. You can give the address to people and they can view it from any internet
connection! There are millions and millions of people on the internet.It's

time you start meeting them! (This service won't be free for long so act now!)

If you have any questions regarding our services, please call us at (541)744-5718.

Ordering Information:

Price: $4 for first scan, $3 for each additional scan
Extras: $1 each to add personalized information. (name/email)
$1 each to have image modified (enlarged, body part blurred, etc.. )
$2 to have image files mailed to you on a floppy disk (IBM or MAC).
$1 credit card processing fee (Visa/Mastercard users only)

If you would like your photographs returned to you please include a self addressed stamped envelope. Otherwise they will be destroyed.

Order Form (PRINT OUT or COPY CLEARLY):

Name (optional):

Email Address or Screen name (PRINT CLEARLY! You must be able to receive file attachments. Otherwise include $2 for shipment on floppy disk.):

Address (optional unless having shipped on disk):

Phone number (optional):

File type (GIF, JPEG, or BMP. GIF recommended):

Extras (Exact personalized info you want printed on scan):

Disk Format (if having mailed on a floppy): IBM or MAC

Payment method (Cash, Check, Money Order, or Visa/Mastercard):
Please make checks payable to Cyber Services.

Credit Card # (credit card orders only):

Expiration date:
Don't forget to include the $1 processing fee if your paying with your credit card.

Do you want the FREE GIFT? Yes or No (circle one)
-Web Page(s) in our "Internet Date-Site" (under construction). You can have a page for yourself, a page for your car, and a page for your cat! Be sure to indicate where you want your page (F4M, M4F, F4F, F4M, or Couples) and which of the following info you want on your page (print clearly): State and Town, email address, year or birth, physical description, quote/message (under 30 words please). Please indicate which photos you want on your page (if any) if you don't want them all to be displayed. If your want your nude/erotic photos displayed in our erotic image gallery YOU MUST include a signed statement that your are over 18 years of age or older and give us

consent to display your nude/erotic photo, and be sure to tell us if your want it displayed with your info or anonymously.

Mail the above information and photos with payment to:

Cyber Services
2852 Willamette St. #131
Department 1
Eugene, OR 97405

Orders sent overnight will be given first priority.

Erotic/Nude photo's will be accepted providing everyone in them is of legal age.

Questions? Call (541)744-5718

Please help our small business grow by sharing this info with someone you think could use it.

Thank You!

(PrhHpX)

Do you know where to find a dump program that produces a TOS image that can be used with Gemulator ?

I have tried several "dumpers" and I can boot the ST with the image dump created on a disk, but I'm unable to use it with gemulator.

So far, the only multi-tasking system I can get CuBase to work well under is Geneva in single tasking mode. When you're using CuBase, everything else goes to sleep...but you can at least easily switch back and forth between programs. Also, I belive Steinberg makes a special task switcher for M-ROS that can be purchaced to allow multitasking of midi applications. The M-ROS switcher should allow the passing of midi data between other midi applications and CuBase internaly.

I've tried the multi-tos that came with my Falcon...but it bombs when trying to launch CuBase Audio (could be my fault, haven't worked with it very much).

Try calling your CuBase dealer to see if they can supply you with the M-ROS switcher. I've no idea what it cost, or if it is still avilable.

hehe.. I guess I've overcomplicated things quite a bit ;-)
I use "Selectric", but like you say it deals with the files individually,
so it'll sort of be just like that "show file information" (or whatever) on
the desktop. Nothing I'd like to do with hundreds of files!
And buying UIS isn't exactly an option either as I've grown accustomed to
Selectric and registered it.

I suggest you get Genvea to go with it!
Things run faster, look better, and you get to multi-task.
Neo Desk works great without Geneva...
Add Geneva and you will be amazed...no kidding.

Brian

>
>I think the fault is with MagiC. It doesn't like Cubase very much on any computer.
>I think it will work with MiNT+N.AES, but I'm not sure.

Cubase runs under it's own operating system on Atari - MROS. This is
optimized for real time operations (extremely important for music
applications) and also provides internal patch connections between
concurrently running midi programs and Cubase modules.
If you look at all the problems programs like Cubase have when they
are trying to fight against a mainstream multi tasking OS - Windows,
MacOS etc- I'm sure that you would agree that it's simply not worth
the effort. It's a specialised application so why not use a boot
manager to set the machine up to make the best of it.

My standard Falcon setup is Magic 5, NVDI, Screenblaster in 256
colours, Freedom, Nemesis and comms drivers like Stik, Hs Modem etc.

For CAF, Stoop sets me up in Screenblaster 800*608 monochrome, NVDI,
Nemesis and Let 'em Fly which gives Cubase moveable dialogs with short
key commands.

Cheers

Ed.

DA's Vector is 2D only. Have a look at Neon from Compo - it is fast
(in Atari terms) and has a nice interface. Unfortunately, although the
program is in english, the docs are only available in German.

Another promising one is called Cloe. It was written in France but I
don't know if it was ever developed beyond the demo version. the demo
once again has a nice interface but is slightly buggy. It does however
import lightwave and 3D studio models.

Cheers

Ed.

# 3142. Re: PPP on Atari ?

Newsgroup: comp.sys.atari.st
Date: 1997-02-13 00:00:00 UTC
From: Guido Flohr <gufl0000@stud.uni-sb.de>
Message-ID: <5dtr7u$i7j@hades.rz.uni-sb.de>
Source record: 127908

> You will need a package called Glue Stik to use these with the
> PPP Kit metioned above...it might come with it?

> You will also need the CAB for Mint-Net Overlay...

With gluestik you don't need the cab-for-mintnet.ovl, the STiK overlay
will do (and in fact it does better).

> Perhaps someone can help give locations where this stuff can
> be downloaded...as I'm at work and don't have my index stuff
> handy...sorry.

ftp://ftp.fu-berlin.de/pub/atari/www

You will find CAB, AntMail, GlueStik etc.

Ciao

Guido

Source record: 127909

Hallvard Tangeraas <hallvart@sn.no> wrote:
> Is there an easier and more effective way to do this than to
> "manually" edit the status of each file?

If you have the find command the following shell command will work:

```
find / -name "*" -exec "chmod +w"
```

"find" will search the root directory recursively looking for files that
match the pattern "*" (i. e. all files except hidden ones) and will
execute the command "chmod +w" on all files found.

Ciao

Guido

P.S.: I hope you know what you're doing if you type this in.

From: dritter@lightspeed.bc.ca
Message-ID: <5dtrv2$5io@saltspring.teleserve.ca>
Source record: 127913

I just picked up an Atari 1040 ST and SM124 mono monitor at a second hand store for $15. What exactly do I have here. I've been looking on the internet for info on this machine but the faq's I found so far are really badly written! For one thing there's a hard disk connector on the back. Does the machine have a hard disk controller built in or is this just an I/O port. And if it does is is an ST506/MFM or SCSI? And are there hardware upgrade projects for the machine. I'm not bad with a soldering iron. And pinouts on the plugs etc. What WWW sites are good for getting info and programs. And are there any good faqs on the machine. I use an IBM running Windows95 and Netscape to access the internet. So I can recieve file attachments in my e-mail. If you can send me something that may help a begginer (with the ST not computers). I'd appreciate any help you can give. Or if ya just want to tell me what this machine can do e-mail me at dritter@lightspeed.bc.ca.

Thanks 8-)

>
>A pitty that this one doesn't work on the Afterburner040. :-((

I had a programmer help me write a small app and was able to
get MagiC to load into the Fast Ram on the Might Sonic. I think
the fast ram on the Afterburner is loaded the same way. However
it wouldn't be long before "someone" over wrote the operating
system area. The response of the system is much faster. Just like
running TOS in fast ram. The Mighty and A/B both utilize the
same address for the start of fast ram, both, just like the
TT. I think however because the TT's hardware "knows" about
fast ram at boot up is why it works on that machine and not
ours.

Hi, i recently picked up a whole collection of ST software along with an Atari ST. I've since decided that I dont need another computer to learn, so I'm selling the ST to a friend and the software here on the net. I'm looking for at least $100 and will wait to see if i get any better offers for the lot. I really dont want to split this up.

The best part about this is the large number of original disks. I also have a 'master 3s' floppy drive for atari ST, but no power or cables for it. Make me an offer...

Ted B

here's the list:

63 titles, 84 disks total, 5 incomplete titles:

1st Word Plus (2 disks)
Air Strike
ArticFox
AT-Speed C 16
Atari U.S.A. Language disk
Balance of Power, Geopolitics in the nuclear age
Battlehawks 1942
Carrier Command
Colonial Conquest
Conqueror
Computer Third Reich
Copy II ST
Empire Wargame of the Century
F-19 Stealth Fighter (2 disks)
Federation (disk 1)
Findex V
Flight Simulator II
Frozen Legacy
Global Commander
Grey Skies, Grey Seas
Gridiron (2 disks)
Gunship (2 disks)
Hardball!
High Roller (disk 2)
Ice Hockey (superstar) (2 disks)
Jet (sublogic)
Krystal, The (4 disks)
Leader Board
Leatherneck
Lords of Conquest

Macro Manager
Microleague Baseball (6 disks)
Microleague Baseball II (NL and AL team disk)
Northern Fleet
Omnitrend's Universe II (2 disks)
Pirates (3 disks)
President Elect 1988 edition
Printmaster plus
Pro Copy
Red Lightning (disk 1)
Red Storm Rising (2 disks)
Roadwar 2000 (2 disks)
Roadwar Europa
Silent Service
Silent Service II
Sky Chase
ST Replay
ST X-press March, 88
ST X-press March, 89 diskmate!
Star Trek: The Rebel Universe
Start (special issue #2)
Stellar Crusade (2 disks)
Stock Market Game (2 disks)
Sub Battle Simulator
Tank Platoon (2 disks)
Team Yankee
Test Drive (disk 2)
Tetris
Under the Ice
UMS (universal military simulator)
Vegas Gambler
Wargame construction Set
Wargamers Series: Annals of Rome
Western European Tour, Scenery disk for flight simulator
Xenon 2 (disk 1)

plus 81 non-original disks: many backups,
some pirated titles, a few blank, and a few system disks

Centurion Ministries

Centurion Ministries is a Christian Ministry enabling evangelical Christians and familes, to use and own computers.

We receive donated computers and equipment, ensure that they are workable, and then pass them on, according to a waiting list.

We are looking for IBM systems and peripherals, any ones will do. As well as some of the classic systems, TI-99/4A, Apple II, Commodore, Amiga, and Atari ST.

Centurion Ministries is a legitemate Ministry, subject to, and under the authority of the Elder's Board of El Shaddai Christian Fellowship Church. As such, all donations can be used as a Tax-Write-Off.

We are always in the need for computers and equipment. Please contact via email: ab453@cleveland.freenet.edu
if you have any equipment to donate.

Thanks for your time! Take care and God Bless!

Regards,

James Walter Krych

Well, he said that, but that was just to get it to boot. They had
a modified version of TOS that they wanted to use. Right or wrong
Steve stated he did not want to produce a product that used a
"patched" O/S, and that was where the legal problems lay. It really
dosen't matter now as the "boxed and ready to ship" Barracudas are
now out of the U.S.A. and will never see the light of day here.

Depressingly it looks like we're stuck with Windows though;
no-one can reasonably claim that GEM has *any* market share
worth talking about, and MacOS is even less efficient than
Windows.

But Windows has all the software. And it has stupidly fast
computers running it nowadays; it *IS* annoying that a Pentium
can even struggle to keep up with Windows... especially after
using MagiC on the ST, but I'm afraid this is another
Betamax vs. VHS sort of thing. Until the 486, the PC wasn't
as popular as the other machines; it was the extra speed of
the i486 CPU that gave them the edge, and the prices just
plummeted as more and more people bought PC's.

Sad really... the ST and Amiga were both much better machines.
In fact, I'd go as far as to say that to begin with they were
arguably better than the Apple Mac (if only in terms of cost)
as well.

Anyway, I'm moving to the PC contemptible in a few days time.
This doesn't mean that I'll stop using my ST, however... as
I intend to write software, the ST will make a very useful
interactive debugging terminal at the very least.

Source record: 127739
Body handling: Inline uuencoded payload not displayed: tosdump.zip

I have used TOSDUMP.PRG (tosdump.zip is attached to this mail) that
produces the file: TOS.IMG. I moved this file to the root (C:\) of my
harddisk, renamed it to "Magic_pc.os". And the Gemulator96Demo started OK.
I have only tried it with the swedish version of TOS 1.06.

This tosdump also produces a correct file from inside Gemulator96Demo!

Agreed. If it did this, I would distribute it as an external
application with MultiPlicity (with the author's permission of course).
Having said that, the sample playing functions of v1.10 (just going to
beta testing) are pretty good now, supporting 8 and 16-bit stereo as
well as the previous 8-bit mono (end of shameless plug :-))

> But I like the idea of simple being able to click on a ATARI program
>and it runs, rather than run the emulator, then run the program, if
>thats the case then TOSTOWIN sounds good,

The full version of TOS2WIN is able to run several atari programs the same time. It is possibly to use differnet proppertys for differnt atari programs.

Example:
You can run a text processor like thats write or papyrus with 10MB TT-RAM and fullscreen and to the same time an other atari program with 640x400 monochrome and only 2MB ST-RAM.

With TOS2WIN you are free to use special proppertys for each atari program. You are able to change this proppertys by mouse clicking.

We will translate the manual as soon as possibly.

From: bdc2@bdc2-ra.cwru.edu
Message-ID: <45941566_Beta11_OASIS_NEWS@bdc2-ra.cwru.edu>
Source record: 127748

Well, I have a new, GEM-based telnet that does a FULL vt102 emulation in a GEM window, 40 line display, full graphics fonts (even Connect doesn't do that!!!), that *should* be compatible with any ST monochrome or up, including Falcons and tt's with graphics cards. It still has a few known bugs, like the application keypad doesn't work, and reverse scrolling has some problems.
I NEED beta testers on other platforms (I have a TT 4+4), especially those who have no form of GDOS, in which case the graphics fonts won't show the right chars,and are willing to install AMCGDOS to test it with and without. It runs fine with STiK, with HSMODA7 installed.
Anyone interested e-mail me at:

I don't think chmod has a "recursive" mode, but I guess you could use find
to find * and run chmod on it.

>DA's Vector?

DA's Vector is only 2D.

Cyber Sculpt works fine on the Falcon in my case, as does CAD 3D 2.0. These fit together with Phoenix renderer and Chronos animator, all of which works fine on the Falcon for me. Perhaps you have an older version of the software which has problems on the Falcon. Also, remember that Cyber Sculpt only works in 640x400 2 colour mode (a real nuisance, I know).

If you want an excellent renderer, I would recommend POV-Ray 3 as the best renderer available on the TOS platform (or just about any other platform for that matter). You can render 3D2 format scenes in POV-Ray (as well as 3DS, DXF and anything that can be converted to raw triangle format). Best of all, POV-Ray is free.

Inshape has been available from Toad for some time, so I always thought it was complete. I have seen a working demo. It looks like a reasonable renderer although the modeller didn't look so good. But it's hard to tell; all those cryptic icons and no manual (in the demo) to explain what they do makes it hard to judge.

How about making it play samples with higher sample rates?
I have an external sampler (Yamaha YX16W) where I do my sampling, and then
I convert that format into .WAV or whatever using "525".
The problem is that it samples at 33KHz, and when playing it with N_play
the playback rate does ofcourse slow down quite a bit.

# 3185. Re: Gem or Win95?

Newsgroup: comp.sys.atari.st
Date: 1997-02-14 00:00:00 UTC
From: Dan Cox <village1@lightspeed.net>
Message-ID: <3304D942.3C0B@lightspeed.net>
Source record: 127757

As far as win95 is concerned I wish that they'd dump it and issue a new windows with the old mac or gem look to it. Win95 is clunky and difficult to navigate. Win 3.x was the way to go. The style of having everything in front of you makes the difference. They need to revamp 3.x and they might have something.

In reference to speed of ataris. They don't need faster computers because if the programs are kept small and efficient then the slower processor actually performs like a much higher rated one. The size of the programs are what counts. PC programs generally are huge hard drive space and memory hogs. Just look at Quake. That game want 80 some megabytes fully registered with a 100mhz pentium and 16 megs of ram WITH a video accelerator card.
Dungeon master runs on my 520st with 512k and a 8mhz processor just fine.
(Will run even faster when I get my harddrive!)
Dan

## 3186. Papryus 4 printing problems

Newsgroup: comp.sys.atari.st
Date: 1997-02-14 00:00:00 UTC
From: titus@mothra.rose.hp.com
Message-ID: <TITUS.97Feb14140039@clisome9.rose.hp.com>
Source record: 127758

When I try to print using the HP Laserjet 4 Multicopy driver, Papyrus pops up a message saying it may be out of memory. I had the memory set to 2.5K, so that should not be a problem. A partial page is sent to the printer, which has the font size magnified several times. I'm using SpeedoGDOS 5.

Oregon Research, who I bought it from, hasn't responded yet. They say they are swamped. Has anyone else had this problem? (The printing problem, that is.)

# 3187. Oops ! What have I done ? :|

Message-ID: <855958378_OASIS_@wile.demon.co.uk>
Source record: 127759

Hi all :)

In my ignorance, I seem to have created some extraneous files on my Web
site :(

My problem is, how do I delete 'em ?!
I'm using Oasis/NOS to FTP the pages up there, and I don't know the commands
to delete a file.

Alternatively, can someone take a look at the mess I've created and tell me
where I've gone wrong please ? :)

http://www.wile.demon.co.uk/

Thanks peeps :)

See Ya,
Paz.

Calling this the basic concept they would all be MidiMaze clones, Midimaze being a bit more abstract, with a ball as an enemy, and non texture mapped walls. Midimaze II is then still the best Doom clone, with a maximum of 16 players, lots of extra options, keys, running on ST, TT and Falcon in ST low or ST high, lots of maps and a map editor.

Bye, Hans

## 3194. CoSTa and multi phone providers

Newsgroup: comp.sys.atari.st
Date: 1997-02-15 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <87408744_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 127672
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

I've been toying with putting support for people who use more than one telephone provider into the next release of CoSTa.

Unfortunately? I don't use more than one provider and hence am not really sure what people would like in the way of supporting this kind of thing.

If anyone uses more than one provider (and uses CoSTa), could they please get in touch? If no one bothers, then I just shan't bother putting support in!! The original people who wanted the support haven't been in touch, so maybe no one wants it?

I'm trying to make it as flexible as possible so it suits as many people as possible, but without any support I won't bother :(

TIA, Gary

# 3195. FS: Atari Computer Goods! Even More Atari Stock! FREE Catalogs!

Newsgroup: comp.sys.atari.st
Date: 1997-02-15 00:00:00 UTC
From: bensmith@teleport.com
Message-ID: <5e3vvu$egs$1@linda.teleport.com>
Source record: 127673
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Check out my Updated Atari Catalogs and find More Atari stuff! I've got Monitors for your Atari 8 Bit like Commodore CM-141 "Like the Commodore 1802" And Disk Drives for the Atari 8 Bit like Stock 1050 and a 1050 Duplicator Drive for Backing Up Software. Plus I've bought out the Game Cartridge Gorf for the 400 & 800 & the Educational Math Game Cartridge Space Journey for any Classic 8 Bit Atari Plus I've cornered the Market on New Copies of Print Shop and some Print Shop related Items! That's Gorf, Space Journey & Print Shop All New Copies, All for the Atari 8 Bit! Plus a Good number of SSI and Avalon Hill/MicroComputer Games, and Many of them are Complete. Plus some Flight Simulator II from SubLOGIC including Scenery Disks all for the Classic Atari 8 Bit. For the Atari ST & newer Computers I've added to my HardWare Catalog Spectre GCR Mac Emulators, Indus (Future) GTS-100X Disk Drives, Panasonic MultiSync Monitor that does Double Duty for both ST Color and MonoChrome Monitors and the Cable/Hardware to your ST Computer. I've also added Software to my ST Catalogs & revised my prices. Titles such as Shrink Wrapped Brand New copies of Ultima V for those of you Ultima Collectors & for you who like Flight Simulators, theirs F-15 Strike Eagle, F-16 Combat Pilot, Falcon, Falcon extra Missions Disk, Fighter Bomber and Flight Simulator II. In Productivity Software, theirs Data Manager ST, Degas Elite, Easy Draw, MultiDesk, NeoDesk, Revolver & PageSTream. All for the ST.

See my Web Page at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. At BSC's Web Page you can View, Capture and even DownLoad Atari Catalogs or Contact BSC by Web Page! Or Request Catalogs by E-Mail. Do You Have problems connecting with BSC's web page? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Please let me know if I can't attach files to your E-Mail. I'll get back to you after the weekend. Catalogs are sent only by E-Mail. Not Snail (Postal) Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports.

You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Page an area for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Home Page! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Page with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Page. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

--

Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

This is the February 15th version of the list of Atari stuff that I have
for sale.

ALL THE TITLES BELOW ARE ORIGINALS, PRE-PROD COPIES, OR EVALUATION
COPIES (so you might not be able to upgrade all utilities).
NONE OF THESE TITLES ARE PIRATE COPIES!

---

FIRST CATEGORY: GAMES FOR ST, WITHOUT MANUAL, WITHOUT BOX

Games with + are excellent games that I've played for hours and hours...

+Airball
Airball Construction Kit
Arena (2 disks, Psygnosis)
+Arkanoid (Imagine/Ocean) (SOLD)
Backlash (Paul Woakes, Novagen)
+Barbarian (2 disks, Psygnosis)
Black Lamp (Firebird)
+Blood Money (2 disks, Psygnosis, bloody excellent game)
Brattacas (Psygnosis, classic hi/med res game)
+Bubble Bobble (disk will handled, was my absolute fave game) (SOLD)
Centipede (the Sinister Developments version) (SOLD)
+Chaos Engine (2 disks, disks patched for use on Falcon, can't press any keys
until the game starts or it won't work; don't know if it still works on the ST)
(SOLD)
Deep Space (2 disks, Psygnosis)
Defender II (ARC/Atari, by Jeff Minter, classic game, but difficult to play)
(SOLD)
Dragonflight (Thalion, 2 disks, double-sided drive required) (SOLD)
+Dungeon Master (SOLD)
+Enchanted Land (Thalion) (SOLD)
Extensor 3.3 (Tron-like game, monochrome only, by Golden Games, ancient)
+Formula One Grand Prix (excellent game, 3 disks, includes manual that you need
for the copy protection - passwords)
+Gods (superb game, two disks, by Bitmap Brothers)
+Goldrunner II (boot/game disk plus data disk, by Microdeal, 2 disks in total)
+Goldrunner II Pete Lyon data disk
Goldrunner II some other guy official data disk
+Gridrunner by Llamasoft, excellent game by Jeff Minter (SOLD)
Hitchhiker's Guide to the Galaxy, the original Infocom adventure (alas, no
gadgets anymore, I lost 'em all) (SOLD)
Jambala, the Seven Gates of (Thalion, DS disk version)
+James Pond (by Steve Bak, Millenium Software, preview copy, but is a full one)

(SOLD)
Jupiter Probe (legendary Steve Bak shoot-em-'up with Rob Hubbard Music)
The Killing Game Show (Psygnosis, 2 disks)
+Leatherneck (Microdeal shoot-em-up, really cool, you have to disconnect printer to
get it to work, does not work on Falcon, alas)
+Lemmings (need I say more?) (SOLD)
+Oh No! More Lemmings (totally addictive) (SOLD)
+Lemmings 2 (more addiction) (SOLD)
+Lethal XCess (absolutely great shoot-em-up from the author of Wings of Death, by Eclipse, 2 disks)
+Little Computer People (Activision, really cute game) (SOLD)
+Magic Pockets (great Bitmap Brothers game, one disk)
Monster Business (platform game, Eclipse design)
+Nebulus (by John Phillips, excellent game) (SOLD)
+Obliterator (2 disks, Psygnosis)
Photon Storm (hellishly difficult Jeff Minter game) (SOLD)
+Prehistoric Tale (Thalion game, coded by The Lost Boys, platform thing)
+Return to Genesis (the first true horizontal smooth scrolling shoot-em-up by Steve Bak, excellent graphics, great game)
+Revenge of the Mutant Camels, registered version for 1 Mb ST
+Rick Dangerous (pre-prod copy, looks dodgy but is full version, and legal too. Heavily used, was one of my fave games)
+Rick Dangerous II (also a fave!) (SOLD)
The Sentinel (legendary Firebird game with 10000 levels or whatever) (SOLD)
Shaolin, Chambers of (Thalion, Martial arts game, 2 disks)
+International Soccer (Microdeal, I think it's the best soccer game ever on the ST)
Spaceport (like Fort Apocalypse on the C-64, great concept, dodgily programmed)
Starglider (the legendary Jez San game!)
ST Karate (great graphics, old karate game by Paradox)
Stone Age (really nice puzzle game by Eclipse, excellent graphics, DOUBLE FORMAT, WORKS ON ST AS WELL AS AMIGA!!)
STrikey (Pacman clone by STRIKE-a-LIGHT, ancient)
Teramis, Leavin' (vertical scroller, shooting about spaceship, Thalion game)
Terrorpods (2 disks, graphically impressive, Psygnosis)
Virus (legendary David Braben 3D game, by Firebird, doesn't work on all disk drives (sometimes you have to press the 'eject' button lightly) (SOLD)
+Warhawk (budgetware shoot-em-up by Silverbird, with Rob Hubbard music)
+War in Middle Earth (RPG "Lord of the Rings", *really* impressive, 3 disks, Melbourne House)
Warp (nice Thalion shoot-em-up, graphics by ES of TEX)
+Wings of Death (truly great 2 disk shoot-em-up, by Thalion, several levels have graphics by ES of TEX)

COSTS: Remember, no manuals and packaging. All I'll be sending you is the disks. I am selling all this stuff at 2.5 British pounds per disk. Refer to the end of this text for more details. This includes postage and packaging.

---

SECOND CATEGORY: UTILITIES

These are sold without manuals either, unless specified. All original stuff, no pirate stuff.

1st Word Plus, 3.20 TT (2 disks) *
1st Extra (1 disk, version 1.03, allows index/contents etc. for 1st W+)
Crypt It (old Tommy Software encryption thing)
Degas Elite (Batteries Included) *
Diamond Edge, the latest version 2 ** (with manual) (SOLD)
Diamond Back 3 ** (with manual) (SOLD)
Ed Hak (editor) *
FastCopy Pro 1.2 * (works on Falcon)
G.I.S.T. the Sound Tool
Desktop Butler James *
Geneva ** (1 disk, but this one counts as 2 disks), latest patched version, manual available) (SOLD)
Imagecopy 2 * (2 disks)
Imagecopy 3 ** (3 disks)
Imagecopy 4 ** (2 disks) (with manual) (SOLD)
K-Rhyme (rhyming accessory) * (SOLD)
Mortimer (desk thing by Omikron)
Mortimer Plus * (see above)
Mouse Tricks 2 *
Neodesk 4 ** (1 disk, but this one counts as 2 disks), latest patched version, manual available) (SOLD)
Positive Image ** (2 disks, version 1.0, manual available)
Protext 5 ** (4 disks, and I also have the manual)
Le Redacteur ** (4 disks) (SOLD)
Spectrum 512 * (512 colour drawing program, regular ST only)
Turbo ST (screen speeder, ST only)
Universal Item Selector III
View II * (by DMJ software, good stuff)
Warp 9 ** (3 disks, version 3.81, best for ST)
Xboot 3.10 *

COSTS: The regular ones cost 2.5 English pounds per disk. Titles with one * cost 5 English pounds. Titles with two ** cost 10 English pounds extra. If you want the manual sent, that will count as one normal disk (2.5 pounds). The Do note: Protext/Le Redacteur manuals are big whoppers of things, so those will cost 5 pounds extra instead of 2.5.

Examples:

Protext costs (4 disks plus double extra = 4 * 2.5 + 10) 20 English pounds without manual. With manual, it costs 25.

Imagecopy 3 costs (3 normal disks plus double extra = 3 * 2.5 + 10) 17.5 English pounds.

Fastcopy Pro 1.2 costs (1 disk plus extra = 2.5 plus 5) 7.5 pounds.

---

THIRD CATEGORY: DEMOS.

This is basically a collection of demos that I have. The price varies per demo, and is given for each title. The price specified is in British pounds, so if you want to make another currency of it, check the "additional payment details", below. All demos are ST only!
!! These demos can only be fill-up orders, or orders if you have ordered more than 10 British pounds worth of the first and second category !!

BIG Demo (with handwritten text by ES of TEX, ST only) price: 2
Amiga Demo (ST only): 1
California Beach Girls (fantastic monochrome slide show of girls by the Denise Team. Classic old demo, requires DS disk drive, monochrome only!): 1
Thalion Sound Demo (a copy-protected rare Thalion sound demo, done in 1988, with Mad Max music. Never officially released. You can't put this in a PD library because it's copy-protected!): 2
FNIL (large DS disk drive demo by TNT crew): 1
DEF Demo (1 meg version of the first TLB demo, with hand-written label by Tim of the Lost Boys himself!): 2 (SOLD)
TCB New Year's Demo: 1
Union Demo: 1
Cuddly Demos: With hand-written stuff by Nic of TCB: 2
Whattaheck Demo: With hand-written stuff by NIC of TCB: 2
Decade Demo by Inner Circle: With hand-written stuff by Griff of Inner Circle, final version of 12 sep 1990, STE compatible: 2
Syntax Terror Demo (megademo by Delta Force, compiled, made, finished and copies at the ST NEWS International Christmas Coding Convention in 1990, signed by New Mode, Slime and Chaos Inc. of DF!!): 7.5 *****
European Demos: (megademo of Overlanders, 2 disks, also finished and copied at the STNICCC in 1990, signed by all members of Overlanders): 7.5 *****
Dark Side of the Spoon (by ULM, megademo, with custom ULM label): 1
Lightning Demo (by pendragons, with handwritten label by pendragons): 1
Punish Your Machine (two disk demo, excellent, by Delta Force): 4
Ultimate Muzak Demo (by PHF), volumes I through V, five disks, only sold as a set, all with hand-written labels by Grazey of PHF: All five for 6
Ooh Crikey Wot a Scorcher (TLB megademo, excellent, signed by all members of TLB plus other participants such as Oxygene, Tyrem, Fury, Hawkmoon and Tanis of TCB!): 7.5 *****
Ventura Demo (2 disks, I think it's by ST Connextion, with hand-written labels by them): 3
Reality is a Lie: 1
Black and White: Rare Polish megademo, with hand-written stuff and pix by them on label: 1.
Colorz: By Haemaroids, hand-written label by them: 1.
Froggies over the Fence: Three disk "last of the true megademos", released september 1993, with custom Overlanders "Froggies over the Fence" graphic labels": 8 for all three disks.
Bedlam demo by Chaos: 1
Never + Forever Demo by STEW, GfA Basic megademo: 1
The Beginning of the Ending demo by Flexichron: Handwritten label by Offbase of Flexichron: 1.

The demos with ***** are kindof special to me, and I am not very keen on selling them because they're signed by old friends and all. So the prices are "STARTING BIDS", meaning that you can bid on them. The person who makes the highest offer gets them.

---

FOURTH CATEGORY: MISCELLANEOUS

ATARI CD ROM (SOLD)

ATARI ST CARTRIDGES

And then there's the "Multiface II" and "Ultimate Ripper" cartridges. I also have those. They're ST-only, NO FALCON COMPATIBILITY. I haven't got the manuals anymore either. If you're interested, email me with an offer (I had in mind about 10 British pounds each).

LYNX CARTRIDGES

The following Lynx games are available for 5 British pounds each:

(No manuals and boxes)

Gauntlet (SOLD)
Ninja Gaiden
Rampage
Robosquash (SOLD)
Todd's Adventures in Slimeworld (SOLD)

I am willing to swap any of those for Battlewheel.

GAMEBOY CARTRIDGES

(No manuals and boxes)

The following Nintendo Gameboy games are available for 5 British pounds each:

Bubble Bobble (difficult to play, a real challenge)
Dragon's Lair (beautiful graphics, difficult to play)
Hyper Lode Runner (the classic game)

I am willing to swap any of these for that old tennis-game that was released for the Gameboy in 1989 or 1990.

BOOKS

Books in German:

Atari ST/STE/TT Profibuch (Sybex) THE programming bible, in mint condition. Asking price 25 Dutch guilders or 25 German marks.

Das Buch Zum Atari Falcon 030 (Data Becker). Asking price 10 Dutch guilders or 10 German marks.

Das Grosse ST Viren Schutzpakket (Data Becker) Originally with disk, but I haven't got that anymore. Asking price 10 Dutch guilders or 10 German marks.

GfA Basic (book by Frank Ostrowski, including disk). 10 Dutch guilders or 10 German marks.

GfA Handbuch TOS & GEM (GfA Systemtechnik). 10 Dutch guilders or 10 German marks.

Atari ST Floppy und Hard disk (excellent book, Data Becker, hardcover). 20 Dutch guilders or 20 German marks.

Das Grosse GfA Basic Buch (Data Becker, hard cover). 15 Dutch guilders or 15 German marks.

Scheibenkleister II (by Claus Brod, THE mass storage media bible, with disk). 20 Dutch guilders or 20 German marks.

Book in Dutch:

Programmeren van Basic naar C (Data Becker). 10 Dutch guilders.

If you're interested, please email me with an offer (please also mention the country where you live, so I can estimate the postage costs). ALL BOOK PRICES MENTIONED HERE ARE WITHOUT POSTAGE!!

- READ THE BITS BELOW!! READ THE BITS BELOW!! ------------------------------

ADDITIONAL PAYMENT DETAILS:

I would like people in Europe to pay in British pounds or German marks (German marks = British pounds multiplied by three). People from the Netherlands can pay in Dutch guilders (British pounds multiplied by three). I have to request people outside Europe have to pay in American dollars (British pounds multiplied by 2). No cheques, just cash or International Money Orders from the post office.
I don't like to receive any coins, so if you order for 7.5 or 12.5 pounds (or whatever other currency) then please pick another title and make sure the total amount is divisible by 5 ( INT(x/5)=x/5 ). If you pay with Dutch guilders or German marks, make sure the amount is divisible by 10. If you pay in dollars, simply round off the amount to the next whole dollar and use US$ 1 bills.

GUARENTEE

I can't give any guarentees. Some of the games are old, and some of them have been sitting in my disk boxes for quite a while. All ST-specific titles have not been played since 1993 or so. I am not out to rip anyone off. I have been doing "ST NEWS" and have been doing (and will be doing ) "Ultimate Virus Killer" for quite some time and I hope people know that I can be trusted.

WANT SOME?

Email your order and WAIT FOR CONFIRMATION (DON'T SEND ANY MONEY YET). The quickest mailer gets the first right on a given title. I'll mail back to confirm and then you can send off the dosh. I will despatch the disks by return mail.

# 3204. Gemulator and TOS images

Newsgroup: comp.sys.atari.st
Date: 1997-02-15 00:00:00 UTC
From: cavey@cavestar.demon.co.uk
Message-ID: <856024242.18941.1@cavestar.demon.co.uk>
Source record: 127682

I have d/loaded Gemulator Classic 3.6 from www.emulators.com and
thanks to various posts in this group, I managed to get the TOS image
to load. However, the screen stays white and refuses to boot up any
further. I am using a TOS 1.2 image.

However, reading from the Gemulator 96 on-line manual:

The next step is to install one or more Atari
ST operating systems. Gemulator 96 is capable of running these
Atari ST operating systems:

- 6-chip ROM versions of TOS 1.0, TOS 1.2,
and TOS 1.4
- 2-chip ROM versions of TOS 1.6, TOS 1.62,
TOS 2.05, and TOS 2.06
- The original TOS 1.0 on disk and the
developer release of TOS 1.4 on disk
- MagiC versions 2.0 and up, including
versions bundled with MagiC PC

Does this mean that the number of ROMs is important too? This would
explain why my 2 chip TOS 1.2 image doesn't work

Mark

## 3205. ConNect is great, but

Newsgroup: comp.sys.atari.st
Date: 1997-02-15 00:00:00 UTC
From: Jim DeClercq <jimd1@primenet.com>
Message-ID: <5e4o6i$r0f@nnrp1.news.primenet.com>
Source record: 127683

The fellow who wrote ConNect, the telecomm program, did an excellent job on nag boxes and the loss of abilities and preset parameters with time, for those who do not want to register it. Its last trick was forgetting every serial port except modem 1 on my TT.

On December 22 of last year, I sent money to the US address to register this program, and still I sit and discover new creativity in disabling a good program.

Am about to download another copy, and start over. Has anyone else had and solved this problem?

Joel,

The Portfolio is a palmtop _DOS_ computer. It runs a hard-coded version of DOS which cannot be replaced by the usual means. It is aproximately the size of a VHS video tape.

The STacy is a TOS computer... basically a 1040 ST scrunched down to fit into a portable (transportable, actually) case. It uses a monochrome LCD display, TOS 1.04 (Rainbow TOS), has room for an internal hard drive, and uses an 8 MHz 68000 processor. All of the standard ST ports are suppiled.

See ya,

# 3210. Complete Atari Falcon System for sale

Newsgroup: comp.sys.atari.st
Date: 1997-02-15 00:00:00 UTC
From: Brian-Roland Miller <brmiller@tiac.net>
Message-ID: <3305FCBF.C3E@tiac.net>
Source record: 127688

Pro-level Atari Falcon 030 system for sale, includes:

-Color Compaq VGA monitor with stereo speakers (Great BASS!)
-Atari Falcon 030 CPU with 4 megsabytes of RAM and all bundled h/w
(like mouse)
-500 megabyte external HD filled w/shareware and registered shareware
-Supra 14.4KBPS modem with serial cable
-Migraph ColorBurst hand scanner - scan in color to the Falcon!
-Legitimate versions of the following software (manuals included):

* Calamus S/L with several modules - high-powered publishing package.

* Papyrus 3 - excellent Word Processor with many powerful features.

* AtariWorks with SPEEDOGDOS - fantastic integrated software package
with scalable fonts and scalable font engine

* Working CAB/STiK/Newsie/AtarIRC setup - access every segment of the
Internet with the included software.

* Geneva - a killer multitasking environment with many powerful
features (including appearance management)

* STalker w/STeno - powerful terminal package with good text editor.

* InVISION Elite Color - powerful color image editor and creations
(great for Web and DTP).

* Much more commercial and registered shareware, all legitimate, some
manuals may be incomplete or missing.

This system is fantastic for college students, graphics and design
professionals or hobbyists, and musicians. If you've been looking to
leap into the world of great graphics, sound, and speed that is a Falcon
running TOS 4.04, this is the best opportunity seen in a long time!

Seeking $950 minimum for the system as-is. Will consider unbundling if
offer is reasonable. Please e-mail me at brmiller@tiac.net for more
information.

It's called "feedback", and any author who can afford to ignore the
views of the people who will be buying their products is asking for
problems in the long run, IMHO.

# 3216. MAGIC 5.0 Problems

Newsgroup: comp.sys.atari.st
Date: 1997-02-15 00:00:00 UTC
From: Terry@bahai.demon.co.uk
Message-ID: <856024522_OASIS_@bahai.demon.co.uk>
Source record: 127694

Having updated my computer recently to NVDI 4 and MAGIC 5 I am having some teething troubles which are not covered in the manual. I wonder if anyone out there could help me please.

1) Does anyone know how to stop Pagestream 2.2 from nicking all the remaining memory so that even magic's fileselector does not work. I have allready tried to limit the memory under magic's set up but this seems to be ignored. the only solution I have found is to start a small program such as imagecopy first, then start pagestream, then exit imagecopy to free the memory so the fileselector works.

2) Does anyone know which program I need to buy in order to edit the icons used by magic.

3) How do you get Oasis 1.34 to work under Magic?

4) How do you get Extendos 1.2 to work under Magic, I just get 'invalid drive' errors even when the same setup works under TOS 4.04

Thanks for any help in advance, if I can offer any help on the s/w below please ask.

Terry Stormont ~ FALCON 030, 14Mb Ram, 750Mb HD, EXPOSE, CDRom,
MAGIC 5, NVDI 4, PAPYRUS 4, APEX 2

With some newer versions of the STiK-ovl there might be problems, that's
right. Try to get an older version of it.

Ciao

Mike spouts,

Totally off the wall, but I'd take a copy of the latest
version of Tax Wizzard for my over one year plus disk
subscription to ST Informer unless something else is
in the works:)

Mike

Hi, My second program is on my homepage.
It's aclled. STE_X
It's 5kb big. This is a set of 3 auto program that let you make your
falcon compatible with old st/ste games. Easier than backward in my
opinion. bye..

I have both SL and DynaCadd on my TT, running MagiC 5/NVDI 4 and they're
both terrific! DynaCadd must be run in single-tasking mode with Magic
but nonetheless, it works well!

Switch drivers in Papyrus to just the HP LJ4 - I too found a problem
with the 'multicopy' selection. If I'm not mistaken there are 2 other
HP LJ4 drivers that can be selected.

```
The Swedish Atari Club (SAK) 970104
and NoCrew proudly present...

-------------------------------------------
T H E N O R D I C A T A R I S H O W '97
-------------------------------------------

Dear Atari friends,

It's once again time for the Nordic Atari Show, the annual get together
which has rapidly become a fixture for all Atari users.

Third time lucky, so they say, and as we are arrange the show for the
third straight year we hope to fulfill everyone's expectations and that
this will result in the best possible atmosphere. We've gotten a certain
amount of criticism, both positive and negative, from those who have
attended the shows in '95 and '96. We've taken heed of the suggestions
made and we're once again off and running!

- WHEN AND WHERE?

This year the show will begin on Friday, June 13 and end on Sunday,
June 15. This is the weekend following the beginning of the summer school
holidays as well as the weekend prior to the Swedish Midsummer
celebrations. We'll open at 1 p.m. on the Friday and close at 6 p.m. on
the Sunday.

The show will take place in Gothenburg, just has it has in previous
years. The exact venue has not yet been established. We're still looking
for the cheapest location. The likeliest possibility is Kortedala
gymnasium, where it was held last year or some other venue, nearby.

- WHAT ACTIVITIES WILL BE HELD?

* There will be an Exhibition Hall will dealers, distributors, ShareWare
programmers and a host of other interesting personalities. The usual
meeting place for all those not wanting to "hack". This is also where
the Swedish Atari Club will be found supplying information, sale of
PD-disks, the club magazine's TT, the BBS, etc. We'll also have an area
reserved for a swap meet where you can buy, swap or sell single copies
of Atari related material and a "soldering corner" for those of you
wishing simple repairs done.

* A "Hacker Hall" where demo and other programmers can gather for
competitions and swap demos and all kinds of code. NoCrew is the
Swedish demo group who will see to it that everybody takes part and
enjoys themselves. Those of you hungry after rewards in the form of
```

prizes will be well taken care of. Exactly WHAT prizes these will be hasn't been established, as yet.

* Seminars with a number of well-informed lecturers. Last years seminars were very much appreciated, something of which we naturally have taken notice. The seminars will cover a variety of subjects (i.e. MIDI ercording/editing, DTP, hardware, programming) where the above mentioned "well-informed lecturers" will demonstrate his subject directly on a computer in order to provide the audience with practical examples. We'll also hold the seminars on different days and at varying times so that you won't have to miss the chance if you don't attend on a particular day.

* Minor competitions such as "A-Z on the Keyboard" (a much appreciated contest last year), hard disk throwing (this year we WILL succeed!), network games, juggling, etc. Everything depends on our finding volunteers to act as game leaders and judges. There will be prizes for the winners.

* A refreshment stand will sell non-alcoholic drinks, sweets, chips, etc. We may be able to arrange quantity discounts at the local pizzeria as well as other bonuses.

- WHAT WILL IT COST?

If you intend to attend all three days, you cheapest solution is the Three Day Pass otherwise a Single Entry ticket will do:

* Three Day Pass ... SEK 100:- (about UKP 8.50)
* Single Entry ..... SEK 50:-

These prices include full access to all the activities being held during NAS97.

- WHY SHOULD I ATTEND NAS?

The answer is simple: because you care about the TOS platform. We Atari owners are becoming fewer and fewer and a get-together like NAS is a simple way of seeing what's happening in the Atari world (no, it's not dead!) and meeting like-minded Atarians and hearing what kind of tips, ideas and visions they have.

- HOW CAN I FIND OUT MORE?

Information will be distributed regularly in the same way as this text file. In addition, we have a number of other sources of information where you can find out more about the show depending on your own resources.

* Our mailing list (E-mail). This will provide the very latest information to those on the list. To have yourself put on the list you MUST have an E-mail address. Send us a message on "nas-users-request@tripnet.se" with "subscribe nas-users" in the body of the text. Don't forget to include your E-mail address.

* Our home page on the World Wide Web. This has been in existence since last year and we'll try to update it as often as the information for the mailing list. The home page will contain more detailed information concerning times, schedule of events, directions on how to get there, competitions and housing.

The address is "www.tripnet..se/sak/nas".

* STraight BBS. This is the Swedish Atari Club's home BBS. Information concerning NAS will be included in the SAK menu. You can also use this BBS to ask any questions you may have. The telephone number is: +46 31-336 39 73.

* Our club magazine, "AtariMagasinet", will contain adverts with more detailed information concerning NAS97 in issues 1/97 and 2/97. This is the largest mailshot we will send to our (SAK's) members.

* Our show co-ordinator is Rolf Johansson. He's supposed to know everyting there is to know about NAS97. If you have questions to which you've been unable to get answers anywhere else you can send him a message at "rojo@tripnet.se" and you'll get your answers. If you wish to get into direct contact with him, he can be reached on his mobile 'phone on +46 70-669 52 35.

WE'RE LOOKING FORWARD TO SEEING YOU AT THE NORDIC ATARI SHOW 1997!

Does anyone know of a spreadsheet that works on the TT that can read
and write LOTUS 123 release 5 files.

I need to do some work at home on 123 from the PC I am forced to use by
my employer. They are trying to sort out a laptop for me to use, but I would
prefer to use my TT!

Any help greatly appreciated.

h> I use "Selectric", but like you say it deals with the files
h> individually, so it'll sort of be just like that "show file
h> information" (or whatever) on the desktop. Nothing I'd like to do with
h> hundreds of files!

So how did you set them read only in the first place?!

h> And buying UIS isn't exactly an option either as I've grown accustomed
h> to Selectric and registered it.

I'm sure UIS could be grabbed second-hand quite cheaply. I've only just
switched to Selectric, but I keep UIS on hand for some jobs that it's simply
much easier to use. I'm not planning to dump either of them...

Get the demo for NeoDesk...
It should let you do this...but it could be disabled...not sure.
If you have NeoDesk already...then you're good to go!

Also, check out some of the CLI shells on the ftp archives...
I also vagely recall several shells that came with magazine
disks that had utilites for working with file modes...I'll see
if I can hunt one down for you that isn't "restricted" from sharing
via email.

# 3232. XaAES 0.6 : Foreign client error and mouse doesn't move

Newsgroup: comp.sys.atari.st
Date: 1997-02-16 00:00:00 UTC
From: Marc Billiet <fit3319@innet.be>
Message-ID: <01bc1c21$5b9f5b40$LocalHost@fit1194>
Source record: 127622

I just tried to install XaAES 0.6 on my Falcon and after booting, XaAES gives me the error message 'Foreign Client ? ERROR: Access denied' and continues loading the desktop (I use Gemini 2).
As soon as Gemini has started, I can use the shortcut keys to access the menu (e.g. ALT+M to open Mupfel), but the mouse refuses to work. And yes, moose.xdd was loaded successfully.
When I try XaAES 0.5, the mouse works but I get lots of other problems (which I don't mention here). With that version, I also get the 'Foreign Client'-error, but that doesn't seem to be a problem.
Is there someone who successfully installed XaAES 0.6 on his Falcon ?
Please let me know.

I have a Falcon with 4MB normal ram with a Mighty Sonic 32 (maybe that's the problem ? I tried it without my 4MB fast ram as well), an internal IDE 63MB harddrive, an external Apple CD-ROM (CD-300) an a ZIP-drive. I connected an external PC-keyboard, but this gives no problem with other applications.

Thanks

hehehehehe well, the seconf program is not really difficult, it just
took me few hours, I discover that it was easy to do that trick while
helping someone with an ST game.
The thing was that I couldn't run his game with backward. (weird).
But with ST2Falc, it did run, so I located the good config, and just
wrote this litte 3 prog. Just easier than Ste2falc or backward, and
now I can run all the games I have on the falcon. (of course I don't
have 2000 games to try on ;) )
Bye, see you later on IRC :)

Hi, Well here Xaaaes6 doesn't even load, it says can not find the
resources, even if everything is setup correctly. (at least from what
the doc says).
So if you can use it, tell me. And it's on a regular falcon 14meg.

I just went to your new page ... What a nice one, I really want to
know how you did it, the logo is really juicy !!! Did you use some
atari graphic software ?

I'm curious ...
Jo

Hi there

Have you tried a different driver HP 4l should work better.

I gave up on speedo years ago and use NVDI everything works so much
better and faster. The print routines in NVDI are way better than
SPEEDOGDOS 4 or 5. All the programs I use Papyrus 4 Atari works 1.2x
etc are fine.

# 3240. Specifications for the .SPX graphics format?

Newsgroup: comp.sys.atari.st
Date: 1997-02-16 00:00:00 UTC
From: denyse@interaccess.net
Message-ID: <5e7olj$fto@news.interaccess.net>
Source record: 127630
Cross-posted to: comp.sys.atari.st,comp.graphics.misc

For several years now I've been looking for a description of the .SPX format. Here is what I know: .SPX is "Extended Spectrum" and is used on the Atari ST. There are also .SPU and .SPC (Spectrum Uncompressed and Spectrum Compressed, respectively), which, I believe, are supported by the PBM package. I have searched the web many times and in many different ways, but this particular format was not described anywhere. I am not looking for someone who can convert these to some other format, I am purely interested in a description of the format (or perhaps source code to read it).

These two newsgroups (comp.graphics.misc and comp.sys.atari.st) seemed the most appropriate to me to ask my question. If not, then please accept my apologies, and maybe someone could point me to a more appropriate newsgroup?

Thank you very much.
Ben Jos Walbeehm.

g> Although why MagiC couldn't come with memory protection, god only knows!

FWIH, Magic is supposed to have been written to support the 'Outside' Virtual Memory Manger and consequentialy cant run with memory protection. Another reason for not having a seperate non-Outside compatible version apparently is due to the heavy time/processor overheads the memory protection would give anyway.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

## 3249. IDE formatting problems

Newsgroup: comp.sys.atari.st
Date: 1997-02-16 00:00:00 UTC
From: agoold@cix.compulink.co.uk
Message-ID: <E5pnyx.F3x@cix.compulink.co.uk>
Source record: 127639

I have an offline friend who is having an IDE hard drive problem.
Hopefully someone here can help can help.

He is using a TOS 4.04 Falcon, with afterburner card (no memory
fitted) a Falcon Wing with 16mb RAM. He has a desktopper.

The exact same problem is occurring with 3 different IDE drives. The
OE internal 65mb drive, A seagate of indeterminate size, and a 1gig
Quantum Fireball.

He has had the Fireball working for months and then experienced a
crash, so he decided to reformat it. (The same problem occurs with all
the ide drives when tried seperately)

AHDI appears to reformat it OK if you decide not to mark bad sectors,
but at the end of the format it says that it can't be partitioned as
it has been formatted with an old version of hdx.prg

After spending some time on the problem today I got both the Fireball
and the OE 65mb to format with ICD Pro V6.2.0 using the install
option. This worked fine with the 65mb which it partitioned into 3.
But with the Fireball it created partitions C - P of 32mb each. This
obviously meant that the majority of the drive was inaccessible. Once
formatted with ICD I tried to repartition it with

ICD (the icdfmt.prg got to scanning scsi devices and locked)
HD Driver version 6.0 (appeared to partition OK, but then you can't
access partitions after a reboot)

AHDI V6.05 (it can't be partitioned as it has been formatted with an
old version of hdx.prg)

Diamond Edge (Although it can see the partitions C_P when trying to
repartition it doesn't recognise the drive)

He also has a scsi external that is working perfectly.

Any ideas...

Regards

Al

Source record: 127644

Am running a Mega ST with 4 megs memory - a 16 Mhz accelrator board - Link II with a 1.06 gig hard disk - SCSI CD Rom - SCSI Zip Drive. as for software in the auto file I have NVDI4 - FMC (clock software) - ExtendDOS - UIS_3 - and NeoDesk 3.01..... The problem I seem to be having is that when I install MagiC and than boot it, MaciC will come to its desktop and than a message will appear saying that there is a stack overflow - system halted. To do anything at this point I have to reboot the system. I have removed all the files from the auto folder and still seem to have this problem. Does anyone out the using MagiC have any ideas or suggestions. I also have tried this on my 1040STfm. it to comes to a halt with the message Stack overflow. So I doubt it is a problem with the Atari itself. Could it be a problem with the software itself, and if so is the a patch to fix it. Thanks for you help in advance

Sorry, Terry, I can't help here: I don't have this problem with Pagestream
on a TT with MagiC 5.03 and NVDI 4.1, but I do with PROTEXT 6.5.

>2) Does anyone know which program I need to buy in order to edit the icons
> used by magic.

ICONEDIT.PRG should have been installed in the path ..\GEMSYS\MAGIC\.. -
if not, it's on your MagiC floppy, disk 2.

>3) How do you get Oasis 1.34 to work under Magic?

I forgotten: you're best to upgrade to Oasis 2, do the upgrading
without Magic first.

>4) How do you get Extendos 1.2 to work under Magic, I just get 'invalid
> drive' errors even when the same setup works under TOS 4.04

AFAIR, v 1.2 doesn't work with MagiC.
I suggest you contact Systems Solutions and upgrade to Extendos 2.4A.

Best of luck! I hope some Falcon-user will be more specific.

Well I wrote a sample player which did WAV, AVR, VOC & IFF for the
Falcon some time ago - it resamples in real time, direct from disc. It
was called PLAY_SAM - highly imaginative I know :) It should be on any
atari bulletin board which takes NeST as it was hatched via Fanfiles.

Do you have any info on MP3?

>Here's a concept: LPS is designed to play "streaming" audio already (it can
>play samples that are larger than memory without pausing, as long as you

>RA format to RIFF WAV Format and then passes the data to LPS?

I don't see why <15ms is a necessity - my little clickie seemed to do
quite well with my 33ms SCSI :)

You have to update your Extendos! The latest version is Extendos Pro 2.4A.
There is some update files out on the BBS's! So take a look after EPRO_210.ZIP,
EPRO_23A.ZIP, EPRO_240.ZIP, EPRO_24A.ZIP this files is patch files to update
your current version! Otherwise contact Anodyne Software for help or upgrades.

Yeah, MagiC does support Outside (supposedly, I haven't tried it now I have
16meg).

I think you're a bit confused :) MagiC *can* run with memory protection, I
use MagToRom from Uwe Seimet (author of Outside)!
As for the time/processor overheads, I don't think that's true!!
The PMMU should not impact on processor time AFAIK! Could be wrong though :)

It seems to me that, it's just laziness that MagiC doesn't come with memory
protection (at least as an option). Look, if a third party can provide it
(Uwe) then it should be provided as standard!!

# 3263. 4 Sale Atari Stuff

Newsgroup: comp.sys.atari.st
Date: 1997-02-16 00:00:00 UTC
From: phantomm@harold.eastky.com
Message-ID: <5e86pr$7f9@netnews.mis.net>
Source record: 127653
Cross-posted to: comp.sys.atari.st,comp.sys.atari.8bit

Will sell the following Atari items to the best offer.
Buyer pays shipping.
All items are Original, no pirated stuff.
---
For the Atari ST, I have these used INFOCOM Titles. All are in
the original boxes and have all manuals, maps, and etc.
Best offer for all 7 titles.

ZORK
ZORK II
ZORK TRILOGY
BEYOND ZORK
A MIND FOREVER VOYAGING
WISHBRINGER
SPELLBREAKER
---
For the Atari 8-bit.

2 OSS BASIC XL CARTRIDGES and 2 MANUALS
One cart is Black with Yellow Label. Version 1.03
One cart is Orange with Yellow Label. Version 1.02
One manual is the paperback Reference Manual. 135 pages.
One manual is loose pages in a hardback 3clip yellow notebook which
has the 135 page Reference Manual. Plus the 176 page "30 Days to
Understanding Basic XL"
Also included is an Original OSS Basic XE extension disk.
Best offer.
---
PQ The Party Quiz Game by Suncom.
4 push button controllers, Interface Module, Original Manual and
Software. Disk software includes...
Program Disk and Question Disk on Flippies. Has both Atari 8-bit and
Commodore 64 versions. And these extra Question disks...
Education Edition 1
Entertainment Edition
General Edition 2
General Edition 3
This should work on any Atari 8-bit. Was tested on a 130XE and
everything works fine and is in very good condition.
Best offer.
---
ATARI SPEED READING
"Develop Advanced Speed and Comprehension Skills and Discover Your
Reading Potential"

Contains all 5 original cassettes and 209 page workbook in a large
black, clip notebook type case.
Workbook has a few pages that were answered in a light pencil. 95% of
the workbook has not been written in. This item is in excellent condition
for its age. The copyright is 1981. Model CX4126
Best offer on this complete package.
---
THORN EMI VIDEO Software
KICKBACK Cartridge. Comes in original black case with instructions.
RIVER RESCUE Cartridge. Comes in original black case with instructions.
SUBMARINE COMMANDER Cartridge. No case or instructions.
THORN EMI COMPUTE 4 & REVERSI Cassette. Original Case and Instructions.
OWARI & BULL And COW Cassette. Original Case and Instructions.
Best offer on these 3 carts and 2 cassettes.
---
ATARI CASSETTES
No paper boxes with these programs.
All are original Atari Cassettes in plastic cases.
AN INVITATION TO PROGRAMMING
WRITING PROGRAMS ONE
WRITING PROGRAMS TWO
INTRODUCTION TO SOUND
INTRODUCTION TO GRAPHICS
Two original Atari Manuals that cover the Writing Programs 1&2
and Introduction to Sound and Graphics, cassettes.
MAILING LIST and Original Atari Manual.
ENERGY CZAR no manual.
Best offer on these 7 cassettes.
---

E-mail any offers and or questions to...

It's time to start using STarCall.
Unregistered version is fully functional and the registration fee is
only $35.

About STarCall features (fragment from the manual):

STarCall is the versatilest DT-Program for ATARI-Computers. It offers an easy
graphical environment for beginners and many usefull functions and features
which enable good work for experts. STarCall is a flexible program, running
on all ST machines using all their power.
STarCall offers general features like VT100-Emulator, telephone list, macros,
GEM, Shortcuts, Puffer and many usefull tools.

- Display in windows or fullscreen
- ANSI-compilant, all attributes incl. blinking
- Grayscale emulation
- GEM-Desktop with shortcuts
- Many fonts in different sizes useable with and without GDOS.
- Batch programming language
- Buffer management , quotes
- Moduls for protokolls and tools
- Moduls for FAX, Voice and a full BBS
- fast editor with many tools
- VT52,100,102,200,Ansi with autoswitch.
- List of numbers with individual setup
- Logile for telehone costs
- Passwort protection.
- Fullscreen-Chat
- Online-Help
- many extras like disk format, info, etc...
- MULTRIX, Multitasking-Tetris for fun

You can find the english version of STarCall 2.1 on ftp.teleport.com
and sunsite.cnam.fr

This all sounds very nice but, as far as I know, there is no definite
release date on the English version of Papyrus 5. This makes it of little
use to us English speaking users.

Is there a demo. of Papyrus 5 available (English or German)? Where could I
obtain it?

Thanks for any help.

There was a player sent out via Fanfiles on NeST recently which works
on a TT based on Doug Little's previously posted CODEC emulator
source. That one resampled on the fly.

I can't remember the name offhand, sorry :(

-> d> bogus dirs.
->
->This sounds wierd...
->
->Are you talking about the shell or the ttp? Your mention of v3.12 would
->indicate that you mean the ttp. If so, what parameters are you passing?

Yes I'm using the ttp with Hotwire as the shell. This is from Hotwire:

F:\UTILS\ARCLZH\LZH\LHARCENG.TTP u /axw:\ A:\BACKUP.LZH F:\BACKUP*.*

Basically I'm using it to update different archives, but Its been making
a ":" folder too, but that hasn't created any disk problems. I see now why
its doing that. Its the "X" folder that messes up the disk.

->If I were to guess, I'd say that you were mixing commands and switches on the
->commandline.

Probably, but I just checked the docs again and don't see anything wrong.

No problem, when in ftp just use the DELE (or dele it doesn't matter) command and then the filename you want to get rid of ... that does need to be exact though! ;-)

You are assuming everyone has access to a shell account. In my experience
that is a long way from being the case. I only know of one ISP in the UK
that offers it. It is not surprising that few companies these days want to
go to the effort of running shell accounts that few people will have the
knowledge or inclination to use.

> The problem is I have absoloutly no idea, dunno how ?

OK, If you have a copy of KnifeST (given away on an ST Format cover disk
long ago) you can mess with almost anything on a floppy.

Just go in and alter something important :)

Maybe even cook up a custom format for track 79.

OK, the real way to do it is to get hold of the WD1772 specifications, a
list of the WD1772 addresses in the Atari, a decent assembler, & a few
hours later you will be the proud owner of a disk trasher program.

Actually, there may be a bios call that might achieve the same thing (only
less painfullly). Check out the docs for any decent C compiler, or maybe
you already have a book on the ST bios.

## 3284. Thanks to all - tos1.0-disks

Newsgroup: comp.sys.atari.st
Date: 1997-02-17 00:00:00 UTC
From: Manfred Vogelgesang <mavo0003@stud.uni-sb.de>

Source record: 127524

Thank you very much to all who helped me with my problem of exchanging tos1.0-formatted floppy disks between ST and PC.

I just had a lot of disks that were formatted unusually (you might call it "hyperformatted"). These do not seem to be usable on my PC, but the normal ones are o.k. I can also use them with Gemulator.

Manfred

I've seen all this and cured it somehow [g]. Can't remember what stopped the
mouse locking, but it I remember the _exact_ form of the INIT path below was
about the only way to do it. Look at these files and maybe try to adapt them to
your needs:

C:\MULTITOS\MINT.CNF

```
CON=u:\dev\console
#PRN=u:\dev\console

cd u:\

#exec c:\auto\blowboot.prg

setenv UNIXMODE /-ru
setenv TEMP /tmp
setenv TEMPDIR /tmp
setenv PATH .,/usr/bin,/usr/local/bin,/usr/etc,/usr/ucb
setenv HOME \home
setenv SHELL \bin\sh
setenv TERM atari
setenv PCONVERT PATH,SHELL,HOME,CDPATH

sln e:\ u:\
sln e:\usr\bin u:\bin
```

```
sln e:\etc u:\etc
sln e:\usr u:\usr
sln e:\home u:\home
sln e:\tmp u:\tmp
sln e:\var u:\var

cd u:\h\68030.bin\
INIT=u:\h\68030.bin\xaaes.tos -fvideo 26

#exec e:\usr\etc\syslogd

echo Now booting MiNT.

H:\68030.BIN\XAAES.CNF

# XaAES Startup Configuration file (xaaes.cnf)
# (w)1995, by Craig Graham.
#-----------------------------------------------------------------
#
# '#' is a comment line.
# Commands are not case sensitive (although paths may be,
# depending on your filesystem).
# Generally the syntax of this is supposed to be the same as
# Atari's GEM.CNF file (although not all of it is relevant).
# If a command isn't understood, it gets ignored...
#
# COMMANDS:
# run <program> <parameters....> Launch a GEM program
# debug <file/device> Set destination for debugging output
# clipboard <directory> Set location of clipboard (default=c:\clipbrd)
# accpath <directory> Set location of accessories (default=c:\)
#-----------------------------------------------------------------
#
# Set the default clipboard path
#clipboard c:\clipbrd\
#
# Set the accessory search path
#accpath c:\
#
# Launch toswin to handle TOS programs for me
#run u:\h\toswinb2\toswin30.prg
#
# Launch the desktop
#run u:\h\thing109.e\thing\thing.app
#
# Launch the app bar
run u:\h\xaaes6\bar.app
# Run some other stuff
#
# Set Debugging to go to serial port
#debug u:\dev\ttyb
#debug u:\temp\log\xaaes.log
```

```
#
# Set Debugging to go to \dev\null
#debug u:\dev\null
#
#rt u:\bin\sh
```

See how bare I had to make the system to get anything running? With this I ran Everest (sometimes locks up during exit/save) and CAB (offline, can't recall to what extent that worked). I ran both via bar.app, which gave the Foreign Client error, and still does.

I think the 0.6 build is too unstable for real use, but I'm sure it will look nice when it is finished :) I think it is slightly ahead of oAESis 0.76 on the Falcon, as it runs in colour, but I'll stop there in case anyone wants to flame what I've said so far.

Hope that helps.

From: q-funk@megacom.net
Message-ID: <5e9pjr$rf7$3@cti01.citenet.net>
Source record: 127535

I'm looking for a Mega-STE:
* 4 Mb RAM
* internal Hard-Disk controller (HD capacity not important)
* clean or mint condition
-
e-mail offer and details (condition of equipment, included goodies).
-
Preferably offers from within Canada or eastern USA (I'm in Quebec)
Keep in mind that I'm in Canada, when quoting your offer and
calculating your shipping costs.
-
Note that I do not need any monitor; only the machine and, possibly,
some included power softwares (NVDI 3.x &+, MagiC 5.x, etc.) are of
any consideration for this purchase, should you offer your complete
package --unless the price is SO rock-bottom that the monitor seems
like a freebee in the package deal!

# 3296. Internal clock retrofit boards for ST/STE

Newsgroup: comp.sys.atari.st
Date: 1997-02-17 00:00:00 UTC
From: q-funk@megacom.net
Message-ID: <5e9p50$rf7$1@cti01.citenet.net>
Source record: 127536

I'd like to know if there are still PC board retrofits being made, to install a realtime clock into an ST/STE, like the old Zubar ST-Time. This particular one was solderless and had a socket that accepted one of the TOS rom and piggybacked on top of the original rom socket for a totally transparent retrofit, which avoids the limitations related to cartrige clocks. anyone still knows of any such PCB-mounted internal retrofits or know where i could get some of the original Zubar ones?

I couldn't find it in either "The File Formats Handbook" or
"Graphics File Formats (first edition)". You might take a peek and
the second edition of GFF at your local bookstore, but it may be
just too obscure. (IMG, GEM, NEO and various Degas formats WERE
included.)

Yes, you need Extendos or CD-tools. HDDriver is a driver/tools for
harddisks so it doesn't support CD ROM's. What kind of CD utility you
use doen't matter. Both works fine with the latest Neodesk.

>resolutions that I set with the Screenblaster software (I have an external
>Screenblaster with the Screenblaster II software). Is there a way with Magic to
>use higher resolutions than the standard ones?
>
>
Yes - I have the same setup. With the screenblaster software in the auto folder
(I use stoop to start up magic and any other accessories) you just go to the
change resolution option in magic and select any resolution. This kicks off the
screenblaster menu selection and you pick the resolution from there. I run magic
at 800*608 50Hz. Be aware of another problem :-( sometimes you will get a
message telling you your drive is inaccessible and the only way out of this is
to switch off you drive and switch it back on again. I believe this is due to
data clashes on the bus apparently since atari left out a buffer (another good
reason to buy a Nemesis, aparently this is cured by its own buffers) ATB Terry~

STOSSER Sofware
http://www.airtime.co.uk/users/stosser
For Quality FREEWARE ATARI ST Titles

At last we have a working title for our new game "Billy Boy", You will see why when you first view the all new main sprite :), The above url has been updated and all the information re: the game is there, Screenshots will appear in the next week or so, But don't expect too much YET as it's only two months since our last release :)

The STOS FAQ was recently updated and a few facts changed, all thanks to input from Constantin Satiropoulos the Original Author of STOS BASIC,

Most STOSSER Software titles are now available to download via links from the page, Diamond Ice, H.E.R.O. Heartland, Mulitplayer Pakman, Spot It, Island strike, Diskzine Construction Kit, Vidigrid and many many MANY more,

The STOS File site (for STOS programmers) has many new files in the last month, with new extensions and Miscelaneous stuff added,

The main Intro page has gone under a revamp, tested on CAB and should be one of the fastest loading,

Thats it, check it out and remember BILLY BOY to be released at the forthcoming UK ATARI shows in April :)

Cheers...!ynoT

You need a Nova card. It's basically an ATI card in an external box
with a connecting card into the VME slot. See Nima Montasser at:

http://www.magmacom.com/~nima/

# 3306. WTB/T: Spectre GCR or other MAC Emulator for ST (Software only)

Newsgroup: comp.sys.atari.st
Date: 1997-02-17 00:00:00 UTC
From: Elvis Smurf <esmurf@trust-me.com>
Message-ID: <330952C3.524E@trust-me.com>
Source record: 127546

looking for a decent mac emulator for st. i hear spectre is good, but
am open to other. here's the hook: i need for it to be able to read
the ROMS from disk. i don't care wether or not you supply the ROMS, and
am not too particular about original software. e-mail me with offer.

thanks, es-

Ask Patrick Jerchel@B.maus.de for a SB update.
Use SB_AUTO.PRG Release 1.3, that works nice.

Regards, Robert

Sorry, I can't help you with your MagiC problems, but I read your sig and couldn't help but be curious about Expose. Is it available now? Last I heard , the versions here in the US had a problem and had to be recalled. Do you know if they have fixed that and can us stateside Falcon users get one!?

Thanks in advance! :)

That is weird. Newsie seems fussy if you start it from a hot key
or have it installed (app). I'm just running TOS with a directory called
Newsie. Both the renamed files are in this directory along with
Newsie.PRG. I finally got bold and loaded MagiC 5 and Ease. Things
went much smoother then with the window redraws.
Maybe try just moving the renamed UUD.TTX to another directory?
Sure you set the working path the same as the one the decoder is in
in the preferences menu options?

Mike

All of the Extendos upgrades for the Pro version are free. However
you must start out with the next upgrade for the disk you purchased.
You must upgrade for each version that has been made available in order to
get a working version of 2.4. There may be a few you can skip, but
the instructions are in the readme files. Most FTP sites have these
upgrade files.

Depends on the type of damage.

How about low level programming of the 1772 floppy controller chip,
program it to change some of the CRC's on track 78 or 79.

Well this is not true any longer. With the latest 68040 driver
from Doug Little you can run the AB040 without NVDI as well.

You still shouldn't switch on your computer without it. :-)

# 3317. FS/T: Atari ST software [02/17/97]

Newsgroup: comp.sys.atari.st
Date: 1997-02-17 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <5e9b5f$jlo@dfw-ixnews5.ix.netcom.com>
Source record: 127578

If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it). Also, please be sure to read the entire message carefully before you ask me any questions. This will save us both some time. Thanks! -- MJN

*****

All VGA FS/T lists are updated weekly and are available on the WWW at http://www.io.com/~vga2000/

This list was last updated on 02/14/97
---
I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. Please include your full postal mailing address in your reply, along with a list of the item(s) that you are interested in. This information is for internal VGA use ONLY, and will NOT be sold! Also, you will only be added to the VGA mailing list at your request!

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money order, drawn from a U.S. bank branch. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

Very nicely done. If I may make one suggestion: The navigation bar
that appears at the bottom of the index.html page should be at the
bottom of all pages, to save having to go back to index.html when
going from (say) news to subscriptions.

The 3D logo on the index page looks really good.

Well that's an idea. Maybe not 5 minutes as a slow connection can
take everything from 5 minutes to 30 minutes to display one page,
but maybe limit it to a set number of hits to 5 or someting,
and after that display a messag eall over the screen and make alot
of noice and finally wipe your HD. :-)))

;-)

Anyway, your idea was one of the best so far IMHO.

That's strange as people have been doing that for years with stuff like
WinX etc.

Almost. ;-)

That little 'almost' can be a rather huge ALMOST as it has got to do with
Wizztronics.

Ehhh.. what's this? Do you mean _editing_ the icons or just assign
the icons to a specific file/program?

There is also Neon which is supposed to be fairly good. It lacks some
basic functions, but as a 3D modeler I think its one of the best. I
think Neon is supposed to be better than InShape, atleast faster.

You might pick up a used copy of Neon.

Or you just have to write to the BSS (Doug Little) guys and tell them
what you want. ;-)

Doug Little has also ported POV 3 to TOS.

Well there is a small program supplied with Ease as well, but I don't
think you can get it seperatly. It's a shame that there isn't an
simple resource editor for icons only. Oh, there were one for
edting the TOS4 icons as well. Can't remember the name and it
didn't work that well. It could have been updated though.

Hi

Got a Atari ST1040STFM and Atari Megafile 20 (20MB Atari Harddrive).
It starts to boot and displays a boot-up message, but crashes with 3
bombs. Anyone got any ideas?

Can someone also tell me an ftp site for Atari PD/shareware software
etc please?

Please email me because I dont read this newsgroup

Thanks

Kev

Charles,
Once you have defined a nickname, you just use it at the email
address in a send or reply.

For example: nickname: abc users: a@here, b@here, c@there

When you send a message, enter abc in the To: line, and the email
will be sent to the 3 users.

It just that easy.

More questions, let me know.

Source record: 127601

Hi,

When XaAes says it cannot find the resources, I think it is because you
didn't put the line 'cd c:\xaaes' (or whatever xaaes folder you use) in
mint.cnf.
So you should write (in mint.cnf) :

cd c:\xaaes
init=c:\xaaes\xaaes.tos

assuming that the resource file (system.rsc) can be found in c:\xaaes

>(ASCI).
>
>Who can help me?
>In Italy there isn't an Atari shop!!!!

Being that this is a BBS you're using, you can use any terminal
program that uses ANSI graphics.

I use Stalker because I can use it with Steno and I get a good
representation of color text using VT100(which seems faster than ANSI
on this program).

If you would like to have 16 colors and fast scrolling, then your
best bet is ANSI Term which is now a free program somewhere.

With Internet BBS and shell acounts, you can just use Lynx to browse
though the web. If there's anything else you need to know, just
ask...

# 3344. ** Installing Linux Docs?? **

Newsgroup: comp.sys.atari.st
Date: 1997-02-17 00:00:00 UTC
From: quantum@sunlink.net
Message-ID: <5ea8nl$q4s@mars.sunlink.net>
Source record: 127605

Hi! I'm trying to install LinuxM68K on my Falcon030.
However, all of the docs I've found are for either Intel or Amiga.
I already have a decent understanding of the way Unix works, having it at my college already; and I have a friend who runs Linux on his machine if I ever need help with setting that up. Basically, what I need to know how to do is set up a Minix/Ext2/Elf/Whatever it's called filesystem on a partition of my hard drive, and how to set up whatever program there is to switch between Linux and Tos on boot-up. I think I've found some interesting files, but nothing on how to set up the filesystem. Those were all for Amiga.

Any help someone can give would be greatly appreciated.
Unfortunately, I don't have nearly enough time to read this newsgroup as often as I'd like to, so please respond via email.

Thank you in advance for any help (docs, instructions, sites, etc.),
George Garner

Ah repairable damage. You'll have to explain more!

> I want to damage prefrably track 78 or 79,

Well, your only choice is software really, and that is to use some
form of advanced formatter that can write exactly what you tell it.

> Anyone know how?

Some formatters might allow you to mess with the "sector headers"
which amongst other things store the sector number. You could possibly
change this to a stupid value effectively making the sector disappear.

Most of this information can only be written whilst formatting
however. Offhand I don't know if it is possible to change this whilst
leaving everything else intact of not.

What are you up to anyway? <G>

Hi Andreas

Can you tell us where to get 5.04 from? I (and probably most UK users) have
5.03!

Is there a patch available to lift 5.03 up to 5.04? This would be the
easiest solution!

Regards, Gary

Here we go. This is the original news item that I wrote for the last issue of STF, #86. Full instructions on what the code is and how to use it are here:

"SToop, the Falcon-only bootup manager, has been given a PD release following its previous shareware status. Author Phil Hodgkins explained that he couldn't continue development or support following a serious motherboard fault on his Falcon. Since he can't get at the source to release a specific freeware version, Phil has kindly provided a registration code everyone can use. Enter the name as Phil Hodgkins, and use the code ndoazQnf to unlock the program."

Have fun ;)

Let me get this straight. Toad *still* have this thing on the FTP site, months after it was discovered that in fact this is a really nasty kind of virus thing (strictly taken, CARPDIEM.PRG is a Trojan Horse that gives birth to the virus)? The thing I find strangest is that it never actually worked. CARPDIEM.PRG is not a Falcon enhanced game, it just goed right back to the GEM desktop. I can't see why *anyone* in their right might would not delete it right away.
Well, hey, perhaps it's just me ;-)

>The only interesting way to use your st linked with your linux, is to
>use the ST just as a terminal.

No, you could do web browsing and stuff if you set up the PC to do IP
masquerading. That seems a little unlikely since the PC probably has a
better screen than the ST.

>If it is the case and since you don't have enough memory for the st,
>just connect them with a software like connect on the st.
>HOWEVER, PPPKIT MIGHT work. not sure at all though, but for sure it
>requires less memory than mintnet.

Why not STiK? It's not ppp, but if it's your own PC, that shouldn't be a
problem. In fact, it is easier to set up a machine as a slip server than as
a ppp server.

>>I want to hook up my ST (1mb) to my linux pc. using ppp over a

The .SPX format wasn't part of the original Spectrum 512 package. The multi-height format was invented by Gizmo and Phantom from demo coders Electronic Images, if I remember rightly. I don't think they ever released details of the format - in fact I seem to remember one of them saying they wouldn't as they didn't want anyone to much about with their images.

> convert these to some other format, I am purely interested in a
> description of the format (or perhaps source code to read it).

I know a UK programmer recently created a viewer called Klikview which can display .SPX images on the Falcon030, you might want to try a search for that. I *think* the guy was Darren Hook, but I couldn't be sure. Presumably he must have some details about the format to decode it ;)

>In message
><Pine.BSI.3.95.970213081704.7142A-100000@usr06.primenet.com>kellis@primenet.com,
>kellis@primenet.com said:

>>>With gluestik you don't need the cab-for-mintnet.ovl, the STiK overlay
>>>will do (and in fact it does better).

If this is true, it surprises me. It probably means that the
cab-mintnet.ovl is out of date.

>In my experience the last cab.ovl compatible with GlueSTiK is 1.18. I am still
>using it.

Does any later version work with STiK 1.07? That's the version that
GlueSTiK emulates, and that's how it identifies itself to a STiK
application. In principle, CAB.OVL should check the STiK version
before using any of the new functions added in STiK 1.11; if it isn't,
that could be causing the problems you're seeing.

>If Scott is listening:
>
>Are you aware of this, or do you disagree?

Well, I've never noticed the problem myself; although I may well be
using an old CAB.OVL, since CAB 1.5 didn't come with one.

>If you agree, do you have any plans to develop GlueSTiK to accommodate?

I've added the handful of new functions from STiK 1.11 to the most
recent version of GlueSTiK, which is now available at
<URL:http://www.cs.duke.edu/~dsb/files/gluestik-0.02b3.zoo>. If newer
CAB.OVL's work with it, then we'll know what the problem was.

PH Player is a DMA hardware sample player.

Latest release of PH PLAYER ( 16 feb 97 ) now supports :

1/ AU, AVR, WAV, SND, AIF & raw.
2/ Mono/Stereo, 8/16 bits.
3/ a-law, u-law compression.
4/ Most of the popular sample speed supported:
5500, 6258, 7333, 8000, 11025, 12516, 16000, 18900,
22150, 25033, 32000, 37800, 44056, 44100, 48000 & 50066 Hz.
5/ Easy to use, no parameters to worry about.
6/ Drag & drop.
7/ MiNT aware.
8/ STE, MSTE, TT & Falcon.

Download at
http://www.geocities.com/SiliconValley/6880/phsw.html

Coming soon... VOC & Amiga IFF sound sample auto recognition. Check at web
page for latest details!

From: nam101@york.ac.uk
Message-ID: <5e8gke$q47@netty.york.ac.uk>
Source record: 127665

```
: Doesn't help much since Zero-X doesn't do the job. The question was
: about a program that executes a timestretch on a *stereo* file (without
: loosing sync) which Zero-X can *not* do according to one of its authors.

The Composers Desktop Project will do this. It doesn't operate directly on
stereo but it will split to two mono files and then neatly rejoin them
(there is a script to make this process invisible to the user).
Unfortunately it costs a fair bit (but does a lot more - phase vocoder etc
- as well). Further details available if you want them.

NB runs on st (maybe even 1Mb, but slowly) and uses/processes aiff (only,
afaik).

Best wishes

I've downloaded a demo of starcall from ftp.teleport.com/users/atari, I can download ok from a friends falcon and upload ok to my server, but I don't seem to be able to download from my server, it comes up with "data subpacket too long". I've tried all settings I can think of. I use a Falcon, tos4.04 and am using hsmodem7, any one have any ideas?
Thanx.

>> They want to sell us SVK?
>
>Toad has Carpe Diem - the virus - on their site?
>
>ATB, Frank.

Hi Kathy and Frank,

Short answer is yes. It's located at their ftp site pub/newstuff.

The virus was mentioned on their message board back on Nov.1996 and
after a lot of post on this subject I e-mailed them back in Jan 1997
to let them know of the problem and they said they would check it out.

I guess they leave it there for educational purposes ONLY :)

As a 10 year Atarian I have never had a Virus on my machines, lucky?

Am I "Knock, knock, knock'in on Heaven's Door"?

## 3376. NEWSie/Nicknames/Sprintlink/

Newsgroup: comp.sys.atari.st
Date: 1997-02-17 00:00:00 UTC
From: csilver@kendaco.telebyte.com.Spam.Th.is
Message-ID: <5e8r5c$ohm@news.telebyte.com>
Source record: 127669

Hi All,

I tried this once, but I don't think the post was made ;)

1) Does anyone know how to incorporate the nicknames into e-mail messages?
I've stored a lot of names and e-mail addresses, but can't load them into
a new e-mail message. Can you?

2) My ISP uses Sprintlink as a Usenet provider. Bluntly, it sucks :(
Lately, I only get 4 or 5 posts per day then it resets! In the Seattle
area there is at least 68 ISP's that support PPP and many also support
SLIP. Does anyone else experience this problem here in the USA? My ISP
has for months promised better News Group support, but not so far...
I now depend on DejaNews for a connection to c.s.a.st ;^)

Thanks for any replies as this has become very perplexing.

Charles

Ok, I have found a 1040ST I am probably going to buy.... but I'd still prefer to find a Mega-2 for a good price (under $60, not including hard drives or peripherals.) This is your last call... any takers?

Eric

# 3378. WTB: TT VME Video Adapter

Newsgroup: comp.sys.atari.st
Date: 1997-02-17 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970217065301.BAA03617@ladder01.news.aol.com>
Source record: 127671

Hi,

I'm buying a TT030 and would like to know which video adapters are best as far as resolution vs. color. I'm looking for a video adapter that would give me a standard 600 X 800 resolution at 65,000 color or a color pallete close to that at that resolution. The TT's have go resolutions but they have next to nothing as far as simultaneous colors on the screen and after you get spoiled using PCI adapters at those resolutions on PC's, you kinda want that on your Atari as well. I'd go the Falcon route, but I really like the TT030.

# 3383. == Atari System - $175 incl shipping ==

Newsgroup: comp.sys.atari.st
Date: 1997-02-18 00:00:00 UTC
From: "John Hutchinson"
Message-ID: <5ed9an$ign@lana.zippo.com>
Source record: 127426

I'd like to dispose of my remaining Atari goodies quickly so I will
offer ALL of the following for a total of $175 -including- shipping.

Please reply via email at hutchinj@orlando.veda.com.

Hardware:
========
Atari 520STFM w/1Mb RAM, internal and external DSDD floppy drives, mouse,
cables, etc. Will include a grab bag of about 100 floppies (assorted
software) in plastic disk storage boxes, too.

ST Software:
===========
- GFA BASIC 3.5e, interpretor and compiler, with full docs.
- UIS III Universal Item Selector w/docs.
- Populous II, w/docs.
- Falcon by Spectrum Holobyte, w/docs & box.
- Monkey Island by Lucasfilm, w/docs & box.
- Dungeon Master by FTL, w/docs & box.

Atari Books:
===========
- GFA BASIC Training Reboot Camp, 209 pgs, the classic by DA Brumleve.
- GFA BASIC Book, 308 pgs w/disk by Michtron.
- GFA BASIC 2.0 manual, 297 pgs by Michtron.
- GFA BASIC and Assembler, 364 pgs w/disk.
- Inside Atari BASIC (for 8-bits), 183 pgs by Atari.
- ST Assembly Language Workshop, 261 pgs w/disk, by Clayton Walnum.
- C-Manship Complete, 398 pgs w/disk, by Clayton Walnum.
- Atari ST Application Programming, 530 pgs, by Pollack & Weber.
- Atari ST GEM Programmer's Reference, 414 pgs, by Abacus.

# 3386. NVDI 4 and VDI drivers

Newsgroup: comp.sys.atari.st
Date: 1997-02-18 00:00:00 UTC
From: senyshyn@helix.nih.gov
Message-ID: <AF2F981996689669@128.231.207.7>
Source record: 127429

I am sorry if this comes over as a multiple post but Deja-news
has problems tonight.

I have some questions about NVDI 4 :

1) Is it possible to disable the VDI driver in NVDI 4 to use only the
print drivers and GDOS fonts in NVDI?

2) I know that a computer with an ET-4000 based graphics card works
best with NVDI-ET4000 BUT will it work at all with a normal version of
~~~~ ~~~
NVDI 4 (and NOVA VDI version 2.61) ?
In other words, will NVDI 4 fail in a Mega STE with a NOVA 16M card?

Regards
Jan

Washington DC

>standards unless, of course, they originate from M$.

MickeySlop isn't alone in that regard. See: MCA and IDE, both invented by
IBM for the sole purpose of creating a new "standard" when there were
existing standards that worked a bit better - but were not controlled by
IBM.

M$'s clueless capacity, however, exceeds everyone else's be a long shot.
For example, they want all new network drivers to be written in C instead of
hand-optimized assembly. Dollars to doughnuts they want to specify that the
non-M$ engineers writing those drivers use Visual C++ (aka "Viscous Sea
Slime"), too.

The simple fact is that any industry that is dominated by a single vendor
will be stagnant and suppress innovation. Can you say "anti-trust act?"

>so I guess that's the way it goes here.

I suggest you first try info@toad.net and info@compdirect.com; if neither of them has it available, try Bravo Sierra computers. There may be a couple of other retailers (any I didn't give email addresses of, look at my Web site in the Vendors links) who are possible sellers. If all else fails, I would sell my spare package (I planned ahead and bought an extra when I realized that, like everything else, software dies).

Posted and mailed.

That a bit too simple I am afraid, you can't program the WD1772 directly in th
ST, you have to program the DMA Controller (adress $ff8604 - $ff860d) and toggle
some soundchip bits. The standard OS routines aren't able to screw up
disksectors. I posted a message in ...ATARI.PROGRAMMER with an easy way to
damage a disk.

Bye, Hans Wessels

>the doc says).

Yes, I agree that the doc's could do with a few checks...

>So if you can use it, tell me. And it's on a regular falcon 14meg.

Yes, I can get it working.

In my mint.cnf file I have something like:
cd u:\c\xaaes.b6
GEM=u:\c\xaaes.b6\xaaes.tos -video 6

The 'cd' into the XaAES directory makes it able to find its config files. If this doesn't work, copy the XaAES.cnf file to everywhere. :)
(\, \mint \xaaes \auto should do. :-)

Oh, and bar.cnf needs to be the root - not in c:\bar as is implied by the docs.

Very wierd. Sounds as if there is some problem with your moose driver. Are you sure you haven't got the b5 and b6 drivers mixed up? [they are different in the two versions]. Also, do you have any other device drivers installed? or maybe a mouse accelerator? 'Foreign Client?' is a standard name for 'any' app, so it isn't necessarily XaAES generating this message (probably is though)

Hi there!

Check out
"http://www.walusoft.co.uk/fff/philes/di.htm"

Not sure if a downloadable demo is available though.

There is also another doom clone for STFMs STFs STs out there. Its
called "Kill Things". Dont know if it is going to be finished though....The
web page hasnt been updated recently. Rumour that the source code is going to
be released as PD soon... Check out
"

http://www.geocities.com/SiliconValley/6273/killtngs.html"

Hope this helps

Brian.

Nope, thats exactly what I have to do, I think it's a "feature" of
Pagestream :-( It does not seem to be very multitasking friendly and
seems to change all the desktop colours also rendering my windows black
after I quit Pagestream. I have to reboot to see into my windows :)

hey Anthonyj :)
Well the thing is that I do not run the Gem from mint.cnf :p
In my mint.cnf run INIT.prg :)
Then from the login prompt I run the aes I want.
That is why I can not use your trick.
Any other good idea?
Bye

>course) I'll be most grateful.

How much will you offer for the full package - commercially produced? I
think you'll find that MOST of the people here are resistant to piracy
requests.

~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
Can you offer me a commercial package?
I can't get atari stuff here in ISRAEL.
If you can offer me one that will work on an 1040ST
I'll appreciate it. and probably buy it.
Of-course it will have to be reasonable.
Still its a 10 years old game.
I'm not pro piracy.
But when it gets to ATARI stuff, I have no other
resources here. ATARI's market was never much developed in israel.
so I guess that's the way it goes here.

Thanks for answering.
ZOHAR

## 3403. Unfindable Shareware?

Newsgroup: comp.sys.atari.st
Date: 1997-02-18 00:00:00 UTC
From: TL Westgate <tl@westg8.com>
Message-ID: <3309AC13.4204@westg8.com>
Source record: 127483

Now that I'm getting back into my old 520ST, I'm on the hunt for some software that hasn't survived the years-long stay in the closet.

Two shareware titles I was addicted to came out of old ST mags (like STart). They were: Karma and Canfield.

Does anyone have these they could be so kind as to e-mail me? Or know of a web site with them? And, yes, I have checked out the popular repositories (like umich.edu).

Any help would be appreciated.

TIA
TL

> Hi
> Got a Atari ST1040STFM and Atari Megafile 20 (20MB Atari Harddrive).
> It starts to boot and displays a boot-up message, but crashes with 3
> bombs. Anyone got any ideas?

at least two
1)When you see the boot up screen, hold down the Alt key until the desktop appears,
best to have a floppy disk in the disk drive, speed things up a bit), then install
the hard drive C partition via the menu bar above the desktop. - install device/hard drive
double click on the hard drive and check out the "auto" folder.
2)put a floppy in the disk drive with ahdi.prg, hdx.prg (or other hard drive
boot/configuration
programs. turn on the Atari, wait till the desktop appears. turn on the hard drive.
try to boot the hard drive with ahdi.prg. If successful, install C drive from menu
selection
(If you get a Cartridge, you weren't successfull in booting the hard drive)
check out the auto folder by moving everything from it and then copying/moving prg's back
to
it one at a time and in the order you would like them to boot in. Better yet, buy XBoot!

> Can someone also tell me an ftp site for Atari PD/shareware software
> etc please?
> Please email me because I dont read this newsgroup
> Thanks
> Kev

try ftp.umich.edu, ftp.funet.fi, ftp.cnam.fr or ftp.sunsite.cnam.fr
look for \pub directory followed by an \Atari directory
good luck.bonne chance

> any software for that?

You don't need any special software for this. Just put the Atari-3,5" DD-Disks into your Floppy of the PC. That's all. The Atari can read IBM-formatted Disks and the other way around, too. And midi stays midi - doesn't matter which platform.

I think you missed one word Frank. :-)
He said "will not work without NVDI". But as I have said before, with
the latest release of the 68040 driver for the AB040 you don't need
NVDI any longer with Fast-RAM, but who would like to be without it?

:-)

# 3413. Re: XaAES 0.6 : Foreign client error and mouse doesn't move

Newsgroup: comp.sys.atari.st
Date: 1997-02-18 00:00:00 UTC
From: Marc Billiet <fit3319@innet.be>
Message-ID: <01bc1dba$4842ef40$LocalHost@fit1194>
Source record: 127493

I found it !

Thanks to all who replied. I can finally start XaAES 6 (not that I can do much with it, but maybe with a future version ?).

My mint.cnf is now very small (but the lines I removed didn't gave problems):

```
cd u:\c\xaaes
INIT=u:\c\xaaes.tos -fvideo 26
```

My xaaes.cnf is somewhat larger :

```
# set the default clipboard path
clipboard u:\c\clipbrd
# set the accessory search path
accpath u:\c\
# launch toswin to handle TOS programs
run u:\c\multitos\toswin.app
# launch the desktop
run u:\e\thing\thing\thing.app
```

The 'Foreign Client' problem was caused by miniwin.app, that I used instead of toswin.app.
The mouse was frozen because I didn't specify the parameter '-fvideo 26' when starting xaaes.tos.

That's all. And it looks so easy...

# 3414. Re: ISDN on a TT?

Newsgroup: comp.sys.atari.st

Source record: 127494

You could use a 3COM IMPACT ISDN modem, it works and acts like a standard modem accept you hook it up to an ISDN line. When you want to dial as a standard Analog modem you do an ATDT 555-1212, if you want to dial an ISDN connection, leave off the last T and do a ATD 555-1212 and you get connected via ISDN, these modems support A, B & D channels for up to 128K transfer.

NOT ALWAYS! If the Atari has TOS<1.6, it can read PC disks, but the PC CAN'T
read the disks formatted from the Atari's desktop. So to make sure, use DD
disks formatted on the PC.

$10 plus freight. Like new. The best Spreadsheet program for the ST/TT line. Complete with manuals and disks. Toad sells this for $109.

Tom

Also have Pagestream 2.2b for $10, WordPerfect for $10, and other items also.

## 3420. MegaPaint Pro

Hi All!

I'm looking for the large-screen driver add-on for MegaPaint Pro (Tommy Software) as I'd like to run it in other than standard hi-res. Does anyone know if it is still available please?

Speak to 'ya later!

> TTFN

Phil:
This may or may not be useful, but you could do your work on just about _any_
spreadsheet (Atari Works?) and export/save it in ascii delimited(comma or
space or...) format for importation into Lotus. Notice I said _import_, not Open!
I think other *old* spreadshets like Masterplan could save in Lotus *.wk1
(or 2?) format, but I don't know how useful that would be!
There may be other possibilities also, such as Texel, Twist, etc which I really
couldn't comment on.

Why not use a boot manager like XBoot to install a different MINT.CNF
file, which runs the AES rather than your usual setup?

ATB, Frank.

[... stack errors ...]

The problem may be your hard-disk driver software. Magic 4 or over really doesn't like the ICD drivers (which is strange, since MagiC 2 worked fine). I had exactly the same problems (stack errors, etc.) when I upgraded.

Try changing to CBHD (available on atari.archive.umich.edu and elsewhere), which works fine with MagiC. I believe CBHD also supports CDs and Zip drives.

The only problem is that the documentation is all in German. However, it's relatively easy to set up. IIRC, copy CBHD.PRG to the root directory of your HD, and rename it CBHD.SYS. Then run the CBHDCONF program to set up the options.

You might also consider buying HDDRIVER, a commercial driver.

For some reasons I can't make KEMD or pppkit working but I had the TAF
packet working within 30 min.
To install KEMD I've followed your advice (I guess) but when it comes
to the point to start up N.AES I get a nasty warning (which I
unfortunately can't remember right now) and that's it.
With pppkit I can't make a connection.

> any software for that?
> Thanks in advance.
> Sergei

The _only_ problem I can see may be that the Atari disk
was formatted to more than 80 tracks or more than 9
sector/track to be able to put more on the disk. Also
it may need to write an IBM boot sector onto the Atari
floppy.
If you format some DS/DD 3.5" floppy disks on your IBM,
then ask him to copy his MIDI files to the disks,
should be OK.
good luck.bonne chance

AHA! NAEs is not part of KEMD. If you can not load NAES then you have
to see with the manual of the people that do this aes.
KEMD is supposed to work without even any AES.
And if that didn't even work, then you are the first person that
didn't succeed, I am then interested to know, what system you have.
Bye

# 3439. IDE Hard disk problem (time to be humble:)

Newsgroup: comp.sys.atari.st
Date: 1997-02-18 00:00:00 UTC
From: Michael Grove <mgrove@owens.ridgecrest.ca.us>
Message-ID: <5ed77k$2og@ash.ridgecrest.ca.us>
Source record: 127519

I have a Maxtor IDE 1.6gb installed in my Falcon.
I use HUSHI 6.53 as the disk driver.
No problems for over a year.
Last night I was cleaning up the old files from the disk
and went to defrag the drive with Edge. Of course
I backed up partition C and D, but partition E was
just some video files, and the location where I
keep all of my mail, which wasn't on back up.
C and D optimized fine. When it came to E's turn,
about 30 seconds into the defrag the machine puked.
There were a couple of 30mb video files there and
fragmentation was pretty bad from what I could see
on the display.
After reboot the partition is still there.
You can see the files and folder but cannot
copy or access them.

Correct cannot check the drive and HUSHI reports
time out!

Kobold can see the free and used space but cannot
read the drive and gives a time out!

Edge's medic reports DOS Error #-11
reading Dir sectors Location 6723

Medic is able to read both fats. It looks like
it hangs when it tries to validate dir structure.
time out!

I think I see the problem with the above information.
Can the directory structure be replaced/repaired?
It's not a major data loss, but I was trying to keep
some of the videos and mail files.
I am glad that I did learn to back up:) This is the
second time in two years that this has happened under
Edge. I learned (most) of my lesson the last time.

Humbley yours,

Mike

Source record: 127555

: Any answers yet?
Well I tried and I tried. Nights at a row. My friends were asking how I
could spend so much useless time at such a lost cause.
To get my ppp connection going.

I did everything my the book but not a decent connection.
Checked all the files in the /etc folder.
Configurated the deamon drivers as described.
All I got was a connection with my server where it said that the ppp packets
were no good. So I looked at the FAQ of my provider but got lost in the
terminologies. Do I have to know all of this? Guess so.

What's:
arp,metric,vector,mtu/mru (and how can I find out what works for me)
rcvwnd,mss,PAP.
Or how can I force certain protocols with the ppp deamon program? Or see
if it is negotiating with the provider etc. etc.
It might be hidden somewhere but I dont have any clue.

IF you happen to know more about this please help me out. Otherwise I've got
to use the old PC to get coNected.
Thanks for your attention.

I have an old 520 ST (that was upgraded to 1 meg by a local dealer) with 2
single sided disk drives and a color monitor (that seems to have developed
some vertical hold problems) and a bunch of old software and games.
It hasn't been used in years and is taking up space I need. If someone that
can use it will arrange to come get it, I will give it to you.
It is located in Grove City (a suburb of Columbus OH)
e-mail me at axanders@computrek.org or norton@netexp.net if you are
interested in giving this old unit a new home!

Art Xanders

Probably your hard disk driver doesn't run with MagiC. For a test you
can try the demo version of HDDRIVER available from
acp5.chemie.uni-kl.de/pub/atari.

# 3453. MagiC 5 and memory protection

Newsgroup: comp.sys.atari.st
Date: 1997-02-18 00:00:00 UTC
From: Magnus Kollberg <emwoll@emw.ericsson.se>
Message-ID: <yvvg1yu4hzd.fsf@emw.ericsson.se>
Source record: 127562
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,comp.sys.atari.programmer

Hi,

I have heard and read different stories about MagiC and its
so called memory protection.

How is the true story? I have heard several people saying
that MagiC doesn't have any memory protection at all (which
looks to be the truth as it's easy to get "memory block
destroyed" and a reboot as only solution, while MiNT handles
this just fine) but they claim in the docs that they have.

So how is the story? Will MagiC ever get proper memory
protection, or does it already have it, but it just doesn't
work very well or not as it's supposed to?

Anyone?

I know, but it does also load and save regular rescource files, atleast
the old version I have seen, It's not perfect though.

> Magxdesk uses a standard (!) resource file that can be edited with
> any resource editor capable of colour icons.

Yup I know. Interface works just fine, or Zoom which is just a icon
editor if I remember correctly. It's a cut down version of Interface.

There were one other as well... I think it was freeware or shareware.

> Usually there is no need to draw new icons. Most programs come with a
> small rsc file that can be copied to /gemsys/gemdesk/rsc.

How many files can you have in this folder? Is there any disadvantage
to use several files from using just one with all icons pasted into
this one?

As far as I can tell, MagiC does not have proper memory protection. It's supposed to be improved in v5.04 but is certainly pretty bad in v5.03 (which I have). Proper memory protection can only be implemented on processors 68030 and above or 68020 with a co-processor. Since MagiC also runs on STs with 68000 CPUs, the only way to implement it properly is use the MinT method of having two versions of the executable, one that uses memory protection and one that doesn't. Currently, it doesn't do this, though there is no reason why it shouldn't be implemented in the future. One of the Black Scorpian programmers recently wrote a small program to test MagiC's memory protection. All it did was write to memory that didn't belong to it. Magic crashed.

I have treid to come up with some more or less bad ideas and I think
it's a good idea to try to find a way for them to release it. The
thing is that I find the atitude very negative from some people
and it's easy to understand that some has no interrest in buying it
anyway. I might say one or two stupied things from time to time
but as I said, I'm not the only one.

Last I talked to David they were looking at an alternative method
to capture NTSC video. I also think he said that the PAL units
are or will be soon available again.
The units that were returned to Toad, according to Ray before he left,
were sold to Floating Fish Studios, the people who helped Toad with the
Bird of Prey CD. I wonder what they are up to with them?

Friends,

I know this question came up a few months ago (when I was, of course,
unconcerned with the answer), but now I need to remember...

What ST program, if any, can read files created with Adobe Acrobat?
There seem to be a lot of such files out there on the Web.

Thanks for any and all advice!

I just got my ST up and running again, monitor problems, and I started playing my favorite game, Championship Manager. It is a soccer simulation game where you are the general manager. It was made from Domark and is one of the best games I ever played. My question is was there any sequels or any other games that were similar. Also was there an IBM version? Thanks.

Are you talking of sz? You can also change some options on you server's sz
(provided that you log into a shell like thing). Other possibility: Try
to get the gszrz-program. You should find it on most FTP servers with
Atari stuff. It's another implementation of the Z-modem protocol.

Z-modem is quite fast but not very reliable. You have to experiment a
little bit.

Guido

> arp,metric,vector,mtu/mru (and how can I find out what works for me)
> rcvwnd,mss,PAP.

Some of the terminology:

PAP is an authentification protocol. MTU is the maximum transmission unit.
Actually your provider should give you the information of what to specify
as MTU (usually the default will do).

> Or how can I force certain protocols with the ppp deamon program? Or see
> if it is negotiating with the provider etc. etc.

Try to get the manpage of pppd. There you will find information what
options the pppd understands, how to turn on debugging, how to deactivate
certain protocols.

Ciao

>> knows!

>> FWIH, Magic is supposed to have been written to support the 'Outside'
>> Virtual Memory Manger and consequentialy cant run with memory protection.
>> Another reason for not having a seperate non-Outside compatible version
>> apparently is due to the heavy time/processor overheads the memory
>> protection would give anyway.

g> Yeah, MagiC does support Outside (supposedly, I haven't tried it now I
g> have 16meg).

It does, i used it until i got this 16 meg, its still fun booting with 50Meg
of RAM just to show off now and again.

g> I think you're a bit confused :) MagiC *can* run with memory protection,
g> I use MagToRom from Uwe Seimet (author of Outside)!
g> As for the time/processor overheads, I don't think that's true!!

I got this info from a /big/ Magic support dealer, 2nd hand from the
programmer himself.

g> The PMMU should not impact on processor time AFAIK! Could be wrong though
g> :)

If thats all of the answer then yes, but apparently it isnt that simple to
provide true memory protection.

g> It seems to me that, it's just laziness that MagiC doesn't come with
g> memory protection (at least as an option).

You'l not get me to argue the toss with you there.

g> Look, if a third party can provide it (Uwe) then it should be provided as
g> standard!!

Hm!, thats a reasonable statement, but if it was that simple then why isnt
magic life laid out that way.

I dont see why a a seperate 030, /non/ outside compatible version /with/
memory protection, albeit with whatever overheads come with the turf, cant be
made available for owners of fast machine or sadists. 8~))

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

From: caesar@cyberspace.com
Message-ID: <856394367.4881@dejanews.com>
Source record: 127388

Hello again.

Thanks to all of your help and a little good fortune, I've been able to get my MegaSt up and running with a PPP connection. I, as you may remember, have downloaded and set up PPPKIT14.ZIP. After a couple of weeks of use, some questions beg for answers.

First, is there any solution to the 19200bps limit, short of a hardware modification? Does anyone do the mod for a fee?

Second, I have not figured out how to save my desktop configuration in THING (v.59) while runing MiNT. I always get a "could not save settings" message.

And, finally, when I attempt to check my mail with Newsie, I have password validation problems. Is this likely a problem with my server or, instead, Newsie?

I hope you can help.

thank you for your consideration.

Joel!

I installed the BrainStorm JPEG decoder that was part of the CAB_OVL.
It only works on a Falcon though. And I seem to have some problems
with the JPEG.ACC getting stuck asking for another picture. Sometimes
I have to reboot to get out.

But when it works, it works nicely.

Source record: 127397

Jan... no NVDI 4 should work fine in a Mega STe with a Nova card and VDI 2.61 running. NVDI recognizes the graphics driver for the Nova card and disables the NVDI portion for screen drivers, leaving you with a superb GDOS alternative that works terrific!

You can check this out under the NVDI Compatibility CPX - the screen options will be greyed out, only GDOS options will be selectable.

Source record: 127401

Hi,

I've want to change a minix partition back to a TOS partition. However I get an error whenever I use minit with the r(emove) option (minit -r e:) and no change occurs. Does anyone else have any experience of this and a work around?

The minit docs say it is preferable to use your harddisk software to re-create the partition if you can do this without harming other partitions. I have HD Driver 6 which has a "zero partition" option. Will this do what I want it to, i.e. re-create a TOS partition whatever it finds or does it expect an existing TOS filesystem and just zeros the TOS FATS?

Thanks for any info
